

1 **Install Waste Oil Holding Tanks, p. B-19, \$82,400**

2 Q. What common characteristics would cause this installation of five waste oil
3 storage tanks at four specific per-determined (*sic*) sites to be a pooled
4 project?

5

6

7 A. The installations of the five waste oil tanks are discrete expenditures for
8 similar designed facilities at four generation facilities to address a common
9 problem. These installations could be completed separately as they are not
10 inter-dependent.
