

1 B-96 Corporate Application Environment

2 Q. Re: JDE ERP Technology, Showcase Strategy

3 How is the CF(L)Co/NLH split determined?

4

5

6 A. The CF(L)Co/NLH split is determined by considering four components - the

7 number of JD Edwards users, the number of Lotus Notes email users, the

8 total number of employees, and the number of Personal Computer (PC)

9 users. The average of these four components gives the percentage of cost

10 charged to CF(L)Co.
