

1 **Q. Please provide the dollar per month effect on the BBC for each class of customers if**
2 **the zero intercept method were adopted by Newfoundland Power.**

3
4 A. As explained in CA-526, Newfoundland Power uses the minimum distribution system
5 analysis to assign customer costs related to distribution lines, poles and fittings and the
6 zero-intercept method to classify customer costs related to distribution transformers.

7
8 Newfoundland Power has not conducted a zero intercept analysis to determine the
9 customer costs related to distribution lines, poles and fittings.
