

1 **Q. Please show the numerical calculation for the value of 9.7% of the “% Losses to**
2 **Secondary” as indicated in the Short-Run Marginal Energy Cost Estimate, Exhibit**
3 **LCH-4.**

4
5 A. Please refer to the Company’s response to Request for Information PUB-221, Attachment
6 A for information on the value of losses to secondary.

7
8 In reviewing the calculation of losses, an error was discovered reducing the loss factor
9 applied to each class of service. The loss factor to be applied to secondary customers has
10 been recalculated to 8.9%, down from 9.7% shown in Exhibit LCH-4. This in turn has
11 resulted in a reduction in the estimate for short run marginal energy cost to 5.07 ¢/kWh,
12 down from the 5.11 ¢/kWh shown in Exhibit LCH-4. This change will require a revision
13 to Exhibit LCH-4 and Table 4 on page 14 of the evidence of Mr. Henderson. The revised
14 numbers are shown in Attachment A to the Company’s response to Request for
15 Information PUB-221. The Company will file revised testimony at a later date that will
16 reflect the revision.
