

Thermal Plants Facility Rehabilitation (\$1,561,000)

Q. Provide the cost benefit analysis completed to justify the replacement of the:
i) governor and air intake structure on the portable gas turbine at Port aux
Basques; and
ii) exhaust stack of the Greenhill gas turbine.

A. Both the Greenhill gas turbine and the portable gas turbine are used primarily as back-up generation to improve reliability of service to customers in the Burin and Port Aux Basques areas, respectively. The report submitted as part of the Company's response to CA-13 (a) includes a present worth analysis demonstrating that the proposed project is the least cost alternative. A cost benefit analysis has not been conducted specifically on the Greenhill gas turbine exhaust stack.
