

1 Q. What load factor would the Holyrood Plant have to operate at to exceed the
2 Government's 25,000 tons per year limitation using 0.3% sulphur fuel and, using the
3 current load forecast, when would this occur?

4

5 A. Based on a fuel source containing 0.3% sulphur by weight, SO₂ emissions would be
6 less than 25,000 tonnes per year if the facility operated at 100% capacity factor.
