

IN THE MATTER OF the *Electrical Power Control Act*, RSNL 1994, Chapter E-5.1 (the "EPCA") and the *Public Utilities Act*, RSNL 1990, Chapter P-47 (the "Act") as amended, and their subordinate regulations; and

AND IN THE MATTER OF an Application by Newfoundland and Labrador Hydro pursuant to Subsection 41(3) of the Act, for the approval to upgrade Unit 1 stack breeching and to upgrade the fuel oil storage facility at the Holyrood Thermal Generating Station

REQUESTS FOR INFORMATION OF THE ISLAND INDUSTRIAL CUSTOMERS

IC-NLH-1 Provide for each project (**Unit 1 Stack Breeching; Fuel Oil Storage Facility**), updated versions of the schedules at section 5.2 of each of the respective July 11 Hydro reports filed to support these projects, based on the assumption these projects would be approved by the Board in September 2011. Identify in each updated schedule the estimated amount of proposed expenditure planned to be incurred at each milestone date.

IC-NLH-2 **Unit 1 Stack Breeching:** With reference to Table 1 in section 3.4 and to section 4.3 of the July 2011 Hydro report supporting this Project, confirm that the average of the 11-year maintenance cost history, on which the estimated \$49,391 per year O&M cost for Alternatives 1, 3 and 7 is based, fully includes the \$321,000 incurred in 2006.

IC-NLH-3 **Unit 1 Stack Breeching:** How much of the \$321,000 maintenance cost incurred in 2006 (\$320,000 of which was for "Corrective Maintenance") was attributable to the replacement of the floor in Unit 1 in 2006 (as referred to at page B-77 of the Alstom report, Tab B of Hydro's July 2011 report)?

IC-NLH-4 **Unit 1 Stack Breeching:** What would be the average of the 11-year maintenance cost history for Unit 1 if only that part of the maintenance cost incurred in 2006 which was not attributable to the replacement of the floor in Unit 1 in 2006 was included in the calculation of that average?

- 1
- 2 **IC-NLH-5** **Unit 1 Stack Breeching:** Has Hydro been advised by any of its
- 3 consultants, or does Hydro have any other evidence, that the floor
- 4 of Unit 1 will require replacement within the study period of the CBA
- 5 for the Alternatives considered in section 4.3 of the July 2011 Hydro
- 6 report?
- 7 **IC-NLH-6** **Unit 1 Stack Breeching:** With reference to section 4.3 of the July
- 8 2011 Hydro report, what would be the CPW of Alternatives 1, 3 and
- 9 7 if the annual O&M cost was estimated to be the average of the
- 10 11-year maintenance cost history for Unit 1 calculated without
- 11 inclusion of the floor replacement cost incurred in 2006?
- 12 **IC-NLH-7** **Unit 1 Stack Breeching:** At page 9 of the July 2011 Hydro report,
- 13 Hydro identifies that typical maintenance repairs have included
- 14 replacing missing or loose insulating block on the breeching
- 15 interior, the installation of steel plate patches on the breeching
- 16 exterior to cover holes caused by extensive corrosion, and applying
- 17 protective coatings to the breeching exterior.
- 18 (a) How much of the Corrective Maintenance costs (per Table 1:
- 19 Maintenance History) were attributable to the above-identified
- 20 typical maintenance repairs?
- 21 (b) How much of the Corrective Maintenance costs (per Table 1:
- 22 Maintenance History) were attributable to maintenance repairs
- 23 or causes other than the above-identified typical maintenance
- 24 repairs? Provide a breakdown of the costs for each non-
- 25 identified maintenance repair or other cause for the incurring of
- 26 the Corrective Maintenance costs.
- 27 (c) Will all of the types of maintenance repairs incurred per Table 1:
- 28 Maintenance History be reduced if Alternative 2 is implemented,
- 29 so that total maintenance costs (preventative and corrective) for
- 30 the 9-year CBA period will be \$4,000 per year?
- 31 (d) At page 8 of the July 2011 Hydro report, Hydro identifies that in
- 32 January 2009, Hydro switched to fuel oil with a sulfur content of
- 33 0.7 percent, thereby decreasing the future rate of deterioration.
- 34 If that is the case, then why is it expected, under Alternatives 1,
- 35 3 and 7, that the costs of Corrective Maintenance will on
- 36 average remain the same for the next 9 years under those
- 37 Alternatives as it has been for the previous 11 years? Is this
- 38 expectation supported by any consultant's opinion?

1		
2	IC-NLH-8	Unit 1 Stack Breaching: With reference to section 4.3, page 20 of
3		the July 2011 Hydro report, what is the “slightly less initial capital
4		cost” of Alternatives 3 and 7 as compared to the initial capital cost
5		of Hydro’s proposed least cost alternative (\$1,853,900)? What are
6		the components of the initial capital cost for Alternatives 3 and 7,
7		broken down by description and respective cost?
8	IC-NLH-9	IC-NLH-9 Unit 1 Stack Breaching: The Project Description
9		includes ice protection shelters. How much of the initial capital cost
10		of the Project is attributable to the proposed ice protection shelters?
11	IC-NLH-10	Unit 1 Stack Breaching: Has Hydro prepared or obtained an
12		analysis of the cost impact of the absence of ice protection shelters
13		over the 9 year study period for the CBA?
14	IC-NLH-11	Unit 1 Stack Breaching: With reference to Hydro’s response to
15		CA-NLH-4 and CA-NLH-5 in the 2011 Capital Budget Application,
16		this Project (or a Project substantially similar) was ranked 43 rd out
17		of 53 ranked projects. What is the relative rank of this Project, in
18		relation to the Projects recently filed in the 2012 Capital Budget
19		Application?
20	IC-NLH-12	Unit 1 Stack Breaching: With reference to page 8-112 of the
21		Holyrood Condition Assessment and Life Extension Study report
22		filed with the Board on May 2, 2011, does Hydro agree that the
23		safety risk from corrosion/failure of Unit 1 stack breaching is low?
24	IC-NLH-13	Fuel Oil Storage Facility: With reference Figures 1 through 4 of
25		the July 2011 Hydro report supporting this Project, provide the
26		same Figure representation for Fuel Storage Levels in 2006, 2007,
27		2008, 2009, 2010 and to the extent available in 2011.
28	IC-NLH-14	Fuel Oil Storage Facility: With reference to Table 4 of the July
29		2011 Hydro report, provide the complete detail of the assumptions
30		on which the five year fuel consumption forecast is based.
31	IC-NLH-15	Fuel Oil Storage Facility: What is the Justification for the Roof
32		Platform, Fuel Oil Indication System or Access Steps components
33		of this Project? Has any consultant recommended the Roof
34		Platform, Fuel Oil Indication System or Access Steps components
35		of this Project?
36	IC-NLH-16	Fuel Oil Storage Facility: Do any of the other 3 Heavy Oil Tanks
37		(Tanks 1, 2 and 4) have a Roof Platform or Fuel Oil Indication
38		System as proposed by this Project for Tank 3?
39		

- 1
- 2 **IC-NLH-17** **Fuel Oil Storage Facility:** With reference to Section 3, page 8 of
 3 the July 2011 Hydro report, since 1980, in what years has tanker
 4 supply to Holyrood been delayed by ice blockage in Conception
 5 Bay?
- 6 **IC-NLH-18** **Fuel Oil Storage Facility:** With reference to Section 3, page 11 of
 7 the July 2011 Hydro report, in what circumstance does Hydro
 8 anticipate a Heavy Oil Tank being “permanently out of service”? Is
 9 there any consultant analysis that supports such a circumstance as
 10 a reasonable possibility?
- 11 **IC-NLH-19** **Fuel Oil Storage Facility:** With reference to Section 4, page 17 of
 12 the July 2011 Hydro report, has any government authority issued a
 13 regulation, order or directive requiring, or a recommendation, that
 14 access steps be installed between Tanks 1 and 2 and also between
 15 Tanks 3 and 4? Has there been any reported safety issue arising
 16 from the lack of
- 17 **IC-NLH-20** **Fuel Oil Storage Facility:** Has there been any reported safety
 18 issues arising from the absence of access steps between Tanks 1
 19 and 2 and also between Tanks 3 and 4? If so, provide copies of
 20 those reports.
- 21 **IC-NLH-21** **Fuel Oil Storage Facility:** With reference to Hydro’s response to
 22 CA-NLH-4 and CA-NLH-5 in the 2011 Capital Budget Application,
 23 what is the relative rank of this Project, in relation to the Projects
 24 recently filed in the 2012 Capital Budget Application?
- 25 **IC-NLH- 22** **Fuel Oil Storage Facility:** With reference to page 11-93 of the
 26 Holyrood Condition Assessment and Life Extension Study report
 27 filed with the Board on May 2, 2011, does Hydro agree that the
 28 techno-eco risk and safety risk from corrosion of Tank 3 is low?

1

2 **DATED** at St. John's, this day of August, 2011.
