## Newfoundland Labrador Hydro (NLH) Supply and Demand Status Report Filed Monday, December 21, 2020

Supply Notes For December 18, 2020

1,2

As of 1821 hours, December 12, 2020, Holyrood Unit 2 unavailable (170 MW).

At 1903 hours, December 18, 2020, Hawkes Bay Diesel Plant available at 2.5 MW (5 MW).

## Section 2

Island Interconnected Supply and Demand Temperature **Island System Daily** Sat, Dec 19, 2020 Island System Outlook<sup>3</sup> (°C) Seven-Day Forecast Peak Demand (MW) Adjusted<sup>7</sup> Morning **Evening** Forecast Available Island System Supply: 2,090 MW Saturday, December 19, 2020 1,345 1,241 0 NLH Island Generation:<sup>4</sup> 1,690 MWSunday, December 20, 2020 1.335 1,232 NLH Island Power Purchases: 1,335 1,232 150 MW Monday, December 21, 2020 -5 2 Other Island Generation: 250 MW Tuesday, December 22, 2020 5 1,240 1,138 ML/LIL Imports: MW Wednesday, December 23, 2020 2 -1 1,330 1,227 Current St. John's Temperature & Windchill: 1 N/A °C Thursday, December 24, 2020 1,246 7-Day Island Peak Demand Forecast: 1,350 MW Friday, December 25, 2020 1.275 1.172

## Supply Notes For December 19, 2020

At 0248 hours, December 19, 2020, Holyrood Unit 2 available (170 MW).

- Notes:
- 1. Generation outages for running and corrective maintenance are included. These are not unusual for power system operations. They generally do not impact customer supply. The power system operators schedule outages to system equipment whenever possible to coincide with periods when customer demands are low and sufficient supply reserves are available. However, from time to time equipment outages are necessary and reserves may be impacted.
- 2. Due to the Island system having no synchronous connections to the larger North American grid, when there is a sudden loss of large generating units there may be a requirement for some customer's load to be interrupted for short periods to bring generation output equal to customer demand. This automatic action of power system protection, referred to as under frequency load shedding (UFLS), is necessary to ensure the integrity and reliability of system equipment. Under frequency events have typically occurred 5 to 8 times per year on the Island Interconnected System and the resultant customer load interruptions are generally less than 30 minutes. With the activation of the Maritime Link frequency controller during the winter of 2018, UFLS events have occurred less frequently.
- 3. As of 0800 Hours.
- 4. Gross output including station service at Holyrood (24.5 MW) and improved NLH hydraulic output due to water levels (35 MW).
- 5. Gross output from all Island sources (including Note 4).
- 6. NLH Island Power Purchases include: CBPP Co-Gen, Nalcor Exploits, Rattle Brook, Star Lake, Wind Generation and capacity assistance (when applicable).
- 7. Adjusted for curtailable load, market activities and the impact of voltage reduction when applicable ovember

## Section 3 Island Peak Demand Information Previous Day Actual Peak and Current Day Forecast Peak

Fri, Dec 18, 2020	Actual Island Peak Demand <sup>8</sup>	17:15	1,309 MW
Sat, Dec 19, 2020	Forecast Island Peak Demand		1,345 MW

Notes: 8. Island Demand / LIL / ML Exports (where applicable) is supplied by NLH generation and purchases, plus generation owned and operated by Newfoundland Power and Corner Brook Pulp & Paper (Deer Lake Power, DLP).
