

Newfoundland Labrador Hydro (NLH) Supply and Demand Status Report Filed Monday, December 05, 2022

Section 1 Island Interconnected System Supply, Demand & Exports Actual 24 Hour System Performance For Friday, December 02, 2022

Supply Notes For December 02, 2022

1,2

- A As of 0806 hours, November 10, 2022, St. Anthony Diesel Plant available at 8.7 MW (9.7 MW).
 B As of 0144 hours, November 24, 2022, Holyrood Unit 1 available at 80 MW (170 MW).
 C As of 0007 hours, December 01, 2022, Bay d'Espoir Unit 7 unavailable due to planned outage (154.4 MW).
 D At 0905 hours, December 02, 2022, Holyrood Unit 3 available at 100 MW (150 MW).
 E At 1526 hours, December 02, 2022, Holyrood Unit 3 available at full capacity (150 MW).

Section 2 Island Interconnected Supply and Demand

Sat, Dec 03, 2022	Island System Outlook ³		Seven-Day Forecast	Temperature (°C)		Island System Daily Peak Demand (MW)	
				Morning	Evening	Forecast	Adjusted ⁷
Available Island System Supply: ⁵	1,770	MW	Saturday, December 3, 2022	-3	-3	1,430	1,333
NLH Island Generation: ^{4,8}	1,445	MW	Sunday, December 4, 2022	-2	1	1,460	1,363
NLH Island Power Purchases: ⁶	120	MW	Monday, December 5, 2022	3	2	1,550	1,452
Other Island Generation:	205	MW	Tuesday, December 6, 2022	1	3	1,245	1,151
ML/LIL Imports:	-	MW	Wednesday, December 7, 2022	3	3	1,185	1,091
Current St. John's Temperature & Windchill:	-2 °C	-6 °C	Thursday, December 8, 2022	2	3	1,225	1,131
7-Day Island Peak Demand Forecast:	1,550	MW	Friday, December 9, 2022	3	1	1,225	1,131

Supply Notes For December 03, 2022

3

- Notes:
1. Generation outages for running and corrective maintenance are included. These are not unusual for power system operations. They generally do not impact customer supply. The power system operators schedule outages to system equipment whenever possible to coincide with periods when customer demands are low and sufficient supply reserves are available. However, from time to time equipment outages are necessary and reserves may be impacted.
 2. Due to the Island system having no synchronous connections to the larger North American grid, when there is a sudden loss of large generating units there may be a requirement for some customer's load to be interrupted for short periods to bring generation output equal to customer demand. This automatic action of power system protection, referred to as under frequency load shedding (UFLS), is necessary to ensure the integrity and reliability of system equipment. Under frequency events have typically occurred 5 to 8 times per year on the Island Interconnected System and the resultant customer load interruptions are generally less than 30 minutes. With the activation of the Maritime Link frequency controller during the winter of 2018, UFLS events have occurred less frequently.
 3. As of 0800 Hours.
 4. Gross output including station service at Holyrood (24.5 MW) and improved NLH hydraulic output due to water levels (35 MW).
 5. Gross output from all Island sources (including Note 4).
 6. NLH Island Power Purchases include: CBPP Co-Gen, Nalcor Exploits, Rattle Brook, Star Lake, Wind Generation and capacity assistance (when applicable).
 7. Adjusted for curtailable load, market activities and the impact of voltage reduction when applicable.
 8. Due to limitations inherent in the design of combustion turbines, the output of combustion turbines may be reduced in the event that ambient temperatures exceed the threshold

Section 3 Island Peak Demand Information Previous Day Actual Peak and Current Day Forecast Peak

Fri, Dec 02, 2022	Actual Island Peak Demand ⁹	17:35	1,472 MW
Sat, Dec 03, 2022	Forecast Island Peak Demand		1,430 MW

- Notes: 9. Island Demand / LIL / ML Exports (where applicable) is supplied by NLH generation and purchases, plus generation owned and operated by Newfoundland Power and Corner Brook Pulp & Paper (Deer Lake Power, DLP).
