1 Q. **Reference: Reliability and Resource Adequacy Study, Volume III, Section 6.2**

2 What are the options, and their costs, associated with relieving the capacity constraints on  
3 the Bay d’Espoir to Avalon corridor compared to installing additional gas turbines on the  
4 Avalon?

5

6

7 A. Newfoundland and Labrador Hydro is working with TransGrid Solutions to determine the  
8 transfer capabilities to Avalon Peninsula in the event of the prolonged loss of the bipole  
9 and, if required, the identification of transmission-oriented solutions to increase the  
10 amount of power that could be delivered in that scenario. Newfoundland and Labrador  
11 Hydro expects to file the study with the Board in the second quarter of 2019.
