

- 1 Q. **Reference: Reliability and Resource Adequacy Study 2022 Update, Volume I, page 25, Table 2.**
- 2 Explain why the reliability is expected to start as high un-reliability and will then reduce to a
- 3 higher reliability over the years and whether Hydro is aware of LIL defects that are still to be
- 4 resolved.
- 5
- 6
- 7 A. The seven scenarios summarized in the “Reliability and Resource Adequacy Study – 2022
- 8 Update” (“2022 Update”)¹ were used to assess system reliability during the Bridging Period,
- 9 considering a range of potential system conditions, and are not associated with anticipated
- 10 Labrador-Island Link reliability over time. A further description of Table 2 has been provided in
- 11 the 2022 Update.²
- 12 Please refer to Newfoundland and Labrador Hydro’s response to NP-NLH-065 of this proceeding
- 13 for a listing of defects that are still to be resolved.
