

1 Q. Please provide a 5-year projection of revenues and costs by component associated with the
2 solar generation and battery storage in Southern Labrador. In the response, please detail how
3 Hydro will account for, and recover, all non-capital cost-related revenues and costs associated
4 with the solar generation and battery storage.

5
6
7 A. Please see Newfoundland and Labrador Hydro's ("Hydro") response to NP-NLH-003 of this
8 proceeding for a forecast of the chargers in Southern Labrador. Hydro does not have a separate
9 revenue and cost forecast by component. Hydro's responses to PUB-NLH-001 and PUB-NLH-002
10 of this proceeding provide further information on how the chargers, solar generation, and
11 battery storage will operate as a single system to provide electric vehicle charging services in
12 this region of the province while mitigating the impact on the rural deficit.
