REASONS FOR DECISION:
ORDER NO. P. U. 8(2010)

IN THE MATTER OF the Electrical Power
Control Act, 1994, SNL 1994, Chapter E-5.1 and
regulations thereunder;

AND IN THE MATTER OF an application by
Nalcor Energy for an order to establish the terms
of a water management agreement between Nalcor
Energy and Churchill Falls (Labrador) Corporation
Limited with respect to the Churchill River, Labrador.

I. THE PROCEEDING

1. The Application

Nalcor Energy ("Nalcor") filed an application with the Board of Commissioners of Public Utilities (the "Board") on November 10, 2009 for an order of the Board establishing the terms of a water management agreement between Nalcor and Churchill Falls (Labrador) Corporation Limited ("CF(L)Co") with respect to the Churchill River (the "Application"). The Application was filed in accordance with section 5.5 of the Electrical Power Control Act, 1994 (the "EPCA") and sought an order of the Board:

"a) establishing the terms of a water management agreement pursuant to section 5.5 of the EPCA;

b) such other or alternate orders or directions which may upon the hearing of this Application appear just and reasonable in the circumstances."

In support of the Application Nalcor submitted a proposed water management agreement (the "Agreement") as well as pre-filed evidence.

Notice of the Application was published in newspapers throughout the Province and was given directly beginning on November 21, 2009.

Pursuant to section 6 of the Water Management Regulations, Newfoundland and Labrador Regulation 4/09 under the EPCA (the "Regulations"), on December 10, 2009 CF(L)Co filed a written submission proposing the same water management agreement as proposed by Nalcor. On December 11, 2009 Nalcor also filed a written submission as required pursuant to section 6 of the Regulations.

2. Interventions

On December 15, 2009 the Board received a letter from Hydro-Québec, a party to an existing power contract with CF(L)Co, advising that it would not intervene in the Application.

On December 16, 2009 the Board received an intervenor submission from the Conseil des Innus de Ekuanitchit (the "Innu of Ekuanitchit") claiming the use of the air, lands, water, plant and animal life of the territory which they say may be affected by the Agreement and seeking:

"AN ORDER refusing to approve the agreement or, in the alternative, suspending Nalcor’s application and setting aside for future examination the duty to consult and accommodate the Innu of Ekuanitchit; and

AN ORDER that on an interim basis and in any event of the cause, Nalcor pay all expenses incurred by the Conseil des Innus de Ekuanitchit in connection with Nalcor’s application to the board, including costs of counsel, engineers, valuators, stenographers, accountants and other experts or assistants retained by or for the Conseil des Innus de Ekuanitchit in and about the inquiry; and
that Nalcor and the Conseil des Innus de Ekuanitshit are to attempt to agree on a procedure whereby,
upon incurring costs and disbursements from time to time up to the end of the inquiry, trial, the
intervenor will so advise the applicant and the applicant shall pay them within a given time-frame,
unless Nalcor objects, in which case it shall refer the matter to the Board."

On December 17, 2009 the Board received an intervenor submission from Twin Falls Power
Corporation Limited ("TwinCo") stating that it could be an affected supplier and proposing limited
participation in the matter for the purpose of obtaining all documents and information filed in the
proceeding.

On December 22, 2009 the Board received an intervenor submission from the Innu of Uashat mak
Mani-Utenam, the Innu Takuuakian Uashat mak Mani-Utenam Band Council and certain traditional
families of the Uashat mak Mani-Utenam Innu (the "Uashaunnuat") claiming possession, occupation
and use of the territory and natural resources which they say may be affected by the proposed
Agreement and seeking:

"AN ORDER refusing to establish the terms of a water management agreement, or in the alternative,
AN ORDER staying the proceedings in regard to the establishment of the terms of a water
management agreement pending meaningful consultation and accommodation of the Intervenors.

AN ORDER in any event of the cause that Nalcor Energy pay all the expenses incurred by the
Intervenors in connection with these proceedings.

If the Board of Commissioners of Public Utilities orders that all expenses of the Board of
Commissioners of Public Utilities in connection with these proceedings be paid by the parties, AN
ORDER that these expenses be paid by Nalcor Energy and Churchill Falls (Labrador) Corporation
Limited."

On December 22, 2009 Nalcor requested that it be heard with respect to the requests for intervenor
status. On January 6, 2010 the Board received submissions from Nalcor and CF(L)Co each taking
the position that all three requests for intervenor status should be denied. On January 14, 2010 the
Board received replies from the Uashaunnuat and the Innus of Ekuanitshit. On January 22, 2010 the
Board issued Order No. P. U. 2(2010) granting intervenor status to the Uashaunnuat, the Innus of
Ekuanitshit and TwinCo.

On January 26, 2010 Nalcor filed a submission in relation to the claim for interim costs set out in the
intervenor submission of the Innus of Ekuanitshit. On January 26, 2010 CF(L)Co advised that it
would not be making submissions on the interim costs claim. On January 27, 2010 the Innus of
Ekuanitshit filed a reply. On January 29, 2010 the Board issued Order No. P. U. 5(2010) denying the
claim of the Innus of Ekuanitshit for interim costs.

On December 7, 2009 the Board received a letter from Hydro-Québec requesting that the Board
restrict public access to two documents filed by Nalcor with the Application, specifically: i) the
Guaranteed Winter Availability Contract between Hydro-Québec and CF(L)Co; and ii) the
Shareholders’ Agreement between Newfoundland and Labrador Hydro, Hydro-Québec and CF(L)Co.
Hydro-Québec submitted that these documents are confidential in nature and contain information of
a commercial nature. On January 29, 2010 the Innus of Ekuanitshit filed a submission in relation to Hydro-Québec’s request. On January 29, 2010 Nalcor and CF(L)Co filed letters setting out no objection to the Board considering the Guaranteed Winter Availability Contract and the Shareholders’ Agreement as confidential and not making them publicly available. On February 4, 2010 the Board issued Order No. P.U. 6(2010) placing the Guaranteed Winter Availability Contract and the Shareholders’ Agreement on the record as confidential documents with the terms and conditions of the release of documents to be determined by the Board on a receipt of a request for disclosure.

On February 10, 2010 the Innus of Ekuanitshit claimed confidentiality to two reports filed in response to PUB-CIE-1. On February 12, 2010 the Uashaunnuat agreed that these reports should be treated as confidential. On February 12, 2010 Nalcor asked for a copy of the two reports. On February 15, 2010 the reports were released on an undertaking from counsel for Nalcor, with the consent of the Innus of Ekuanitshit.

On February 15, 2010 the Uashaunnuat requested access to the Guaranteed Winter Availability Contract and the Shareholder Agreement. On February 18, 2010 Hydro Québec filed comments in relation to the request for the release of the documents. On February 22, 2010 the Uashaunnuat filed a reply. On February 24, 2010 Hydro-Québec filed additional comments. On February 25, 2010 the Board advised the parties that counsel for the Uashaunnuat could personally view the documents.

3. Submissions and Hearing

On February 12, 2010 the Uashaunnuat filed a request for an oral hearing in relation to the following three issues:

"Does the establishment of the Water Management Agreement or the management of water thereunder trigger a duty to consult and accommodate the Intervenors?

Does the Board of Commissioners of Public Utilities have the jurisdiction and obligation to decide whether this duty to consult and accommodate has been triggered and whether this duty has been discharged?

In all circumstances, and in any event, should the Board of Commissioner of Public Utilities order Nalcor and CF(L)Co to consult and accommodate the Intervenors?"

On February 12, 2010 the Innus of Ekuanitshit filed a motion requesting that the Board suspend the Application until the Lower Churchill Hydroelectric Project is released pursuant to the Environmental Protection Act, SNL 2002, c. E-14.2 and until there has been meaningful consideration of the consultation issue. The Innus of Ekuanitshit gave notice to the Attorney General of Canada and the Attorney General of Newfoundland and Labrador of an intention to raise a constitutional question as to whether the duty of the Crown to consult Aboriginal peoples is engaged and has been discharged. On February 18, 2010 the Board received correspondence from the Department of Justice of the Province acknowledging receipt of the notice and advising that the Attorney General of Newfoundland and Labrador would not be participating. On February 22, 2010 the Board received correspondence from the Federal Department of Justice advising that the Attorney General of Canada would not be intervening.
On February 15, 2010 a technical conference was held supplementing the exchange of information through the Request for Information process. In all a total of 88 Requests for Information were asked and answered.

On February 16, 2010 the Uashaunnuat filed an amended Intervenor Submission amending the relief sought as follows:

"An ORDER that the Crown meaningfully consult and accommodate the Intervenors in regard to the water management agreement or the management of water thereunder, and an ORDER that Nalcor and CF(L)Co. meaningfully consult and accommodate the Intervenors in regard to the water management agreement or the management of water thereunder;

Or, in the further alternative, an Order establishing a term of the water management agreement that directs the Crown (1) to meaningfully consult and accommodate the Intervenors in regard to the water management agreement or the management of water thereunder and (2) to report back to the Board thereon; and an ORDER establishing a term of the water management agreement or the management of water thereunder and (2) to report back to the Board thereon;"

The Board set aside February 25, 2010 and February 26, 2010 for the hearing of the motion by the Innus of Ekuanitshit and the issues outlined by the Uashaunnuat. On February 25, 2010 the Board heard oral submissions from David Schulze for the Innus of Ekuanitshit, Gary Carot for the Uashaunnuat, Ian F. Kelly, Q.C. for Nalcor and Jamie Smith, Q.C. for CF(L)Co. The Board thanks counsel for the well prepared written and oral submissions which were very helpful in the preparation of this decision. TwinCo did not file written submissions or participate in oral submissions.

II MOTION TO SUSPEND

On February 12, 2010, the Innus of Ekuanitshit filed a motion “to suspend the proceedings to establish the terms of a water management agreement for the Churchill River.” The Innus of Ekuanitshit set out two grounds for the motion:

"a. Section 68 of the Environmental Protection Act, SNL 2002, c. E-14.2 prohibits the Public Utilities Board from determining the terms of the Water Management agreement until the Project is released under Part X of the said Act;

b. The Board must suspend in order to meaningfully consider the issue of the constitutional duty of consultation that has been raised by Ekuanitshit and other Intervenors."

In the motion the Innus of Ekuanitshit argue that section 68 of the Environmental Protection Act prohibits the Board from establishing a water management agreement at this time. Section 68 of the
Environmental Protection Act says:

"68. (1) A licence, permit, approval or other document of authorization issued under another Act pertaining to an undertaking shall not be issued until the undertaking has been exempted or released under this Part."

In the motion the Innus of Ekuanitshit argue that, since the Lower Churchill Hydroelectric Project is an “undertaking”, section 68 prohibits the Board from approving a water management agreement until the project has been released pursuant to Part X of the Environmental Protection Act. In written submissions the Innus of Ekuanitshit argued that section 68 applies to the Application because, pursuant to section 5.5 of the EPCA, the Board is “approving” the Agreement. The Innus of Ekuanitshit state that the fact that Nalcor has submitted a ready-made agreement for the Board’s approval emphasizes that it is an approval process. (Written Submission, para. 59) It is suggested that if the Application involved section 5.4 of the EPCA whereby the Board was asked to approve a jointly proposed agreement, section 68 would prohibit approval. Therefore the Innus of Ekuanitshit argue that to find that section 68 doesn’t apply to an application under section 5.5 would subvert the Legislature’s intent to ensure that projects are subject to a complete and sufficient environmental assessment before any government agencies allow an aspect of the project to move forward. The Innus of Ekuanitshit cite section 4 of the Environmental Protection Act which states:

"4(1) Where there is a conflict between this Act and another Act, this Act prevails."

In oral submissions counsel for the Innus of Ekuanitshit said:

"Nalcor says, well, no, no, Mr. Schulze has misunderstood because it’s not the Public Utilities Board that will allow Lower Churchill to be built, and that I’m in perfect agreement with, but the Legislature has said, “No approvals pertaining to an undertaking”, and this approval that is before you today pertains to Lower Churchill. It may not be the approval that is make or break for Lower Churchill, but it pertains to it, and the Environmental Protection Act says not to go ahead in that case."

(Transcript, Feb. 25, 2010, pg. 12/13-24)

The Uashaunnuat did not make an argument in relation to section 68 of the Environmental Protection Act and clarified in oral submissions that they take no position on this issue. (Transcript, Feb. 25, 2010, pg. 138/7-10)

Nalcor argues in written submissions that the Board does not have the power to suspend the Application and further that it is not necessary or appropriate in any event to suspend the Application. Nalcor suggests that it is clear from the language of section 5.4 of the EPCA that a water management agreement is required early in the development process. Nalcor states that the fundamental principle of statutory interpretation is that statutory provisions should be given a “purposive” interpretation that best achieves the objects of the legislation. Nalcor states that the Board does not issue any licence, permit, approval or other document of authorization within the meaning of section 68 of the Environmental Protection Act. Nalcor states that establishing the terms of a water management agreement does not authorize the Lower Churchill Project. Nalcor argues that approval of a water management agreement under section 5.5 of the EPCA is not a document of authorization and, even if approved under section 5.4(3)(a) of the EPCA, is not an approval within
the meaning of section 68 of the *Environmental Protection Act*. Nalcor states that establishing the
water management agreement in advance of the hearing by the Joint Review Panel facilitates the
environmental assessment process. Ultimately Nalcor argues that the *EPCA* is intended to have
paramouncy over all other statutory provisions of general application and cites section 34 of the
*EPCA* which states:

“34. (1) An Act or contract, whether enacted before or after the commencement of this Act relating to
a producer or retailer shall be read and construed subject in all respects to this Act, which in a case
of conflict shall, notwithstanding a provision to the contrary contained in another Act or contract,
prevail over a general or special Act enacted or a contract entered into prior to the commencement of
this Act.”

Nalcor states in its reply submissions that it would potentially be prejudicial to all participants and
the environmental assessment process itself if the water management agreement was not established
prior to the environmental assessment hearings. In oral submissions Nalcor states:

“This Board doesn’t do anything that authorizes the Lower Churchill Project. You are simply
establishing the terms of the Water Management Agreement, which in turn is going to be of utility, as
I’ll come to in a moment, in that environmental assessment process, but there’s no conflict between
the Acts. In fact, the Acts are set up to work perfectly logically together because the EPCA says at the
proposal stage, you establish the Water Management Agreement, that’s going to feed into the
environmental assessment process and then are you issuing a licence, permit, approval, or other
document of authorization; no. So there’s no conflict, the two statutes work well together, they’re
designed to work well together, and that’s the logical interpretation that makes sure you fulfill both of
the objectives.”

(Transcript, Feb. 25, 2010, pgs. 118/10-25; 119/1-4)

CF(L)Co takes the same position as Nalcor arguing that section 68 of the *Environmental Protection
Act* does not prohibit the Board from establishing a water management agreement. CF(L)Co states in
written submissions:

“The modern rule of statutory interpretation is that a statute is to be read in its entire context, in its
grammatical and ordinary sense harmoniously with the object of the statute and the intention of the
legislature.”

CF(L)Co submits that there is no ambiguity or conflict as, in its grammatical and ordinary sense,
section 68 of the *Environmental Protection Act* refers to a licence, permit or approval that
“authorizes” an undertaking and the Board has no jurisdiction to authorize any undertaking in respect
of the Lower Churchill Project. According to CF(L)Co the Board’s role is to establish and oversee
implementation of a water management agreement.

Having considered all of the submissions in relation to section 68 of the *Environmental Protection
Act* the Board agrees with both CF(L)Co and Nalcor that there is no ambiguity or conflict in the
operation of the *Environmental Protection Act* and the *EPCA*. These pieces of legislation can be
interpreted using the plain and ordinary meaning to establish a scheme which allows for the early
approval of a water management agreement between two operators while leaving all approvals in the
nature of authorizations relating to the project until after the completion of the environmental review.
The Board finds that the phrase “or other document of authorization” modifies the word “approval” in the Environmental Protection Act. In establishing or approving a water management agreement the Board is not issuing a document of authorization. Therefore the Board finds that section 68 of the Environmental Protection Act does not prohibit the Board from fulfilling its mandate under section 5.5 of the EPCA to establish a water management agreement.

The Motion filed by the Innus of Ekuanitshit also asked that the Board suspend approval of a water management agreement until the duty of the Crown to consult has been considered.

III DUTY TO CONSULT

The Uashaunnuat and the Innus of Ekuanitshit ask that the Board suspend approval of the proposed Agreement until after the Crown fulfills its duty to consult with them. They argue that the Crown is obliged to consult on two grounds: 1) a statutory duty to consult arising from the EPCA; and, 2) a constitutional duty to consult.

The statutory duty to consult is argued to be founded in section 4 of the EPCA which states:

"4. In carrying out its duties and exercising its power under this Act or under the Public Utilities Act, the public utilities board shall implement the power policy declared in section 3, and in doing so shall apply tests which are consistent with generally accepted sound public utility practice."

The Uashaunnuat and the Innus of Ekuanitshit argue that this section of the EPCA requires that the Board ensure that the Crown consult with them before a water management agreement is established. In the absence of case law considering this section the Board will adopt a plain and ordinary meaning interpretation. Taking this approach the Board finds that this section requires that the Board apply tests which are consistent with generally accepted sound utility policy when it exercises its jurisdiction implementing the power policy of the province. Without more specific language the Board cannot read into this section a statutory duty on the Crown to consult. The Board has concluded that it is in compliance with this section since the tests applied in analyzing the Agreement pursuant to section 5.5 of the EPCA are consistent with generally accepted sound public utility practice. The Board notes that the concept of good utility practice is enshrined in the Agreement in Articles 4.2, 4.3, and 7.1. The Board is not persuaded that a statutory duty to consult can be founded on this section.

The Uashaunnuat and the Innus of Ekuanitshit also raise the constitutional duty of the Crown to consult which is founded on subsection 35(1) of the Constitution Act, 1982, being Schedule B to the Canada Act 1982 (U.K.), 1982, c. 11, reprinted R.S.C. 1985, App. II, No. 44, which states:

"35. (1) The existing aboriginal and treaty rights of the aboriginal peoples of Canada are hereby recognized and affirmed."
The Supreme Court of Canada in *Haida Nation v. British Columbia (Minister of Forests)*, [2004] 3 S.C.R. 511 found that the honour of the Crown requires that it consult Aboriginal peoples regarding resources to which Aboriginal peoples make a claim. The Court said at para. 12:

"The jurisprudence of this Court supports the view that the duty to consult and accommodate is part of a process of fair dealing and reconciliation that begins with the assertion of sovereignty and continues beyond formal claims resolution. Reconciliation is not a final legal remedy in the usual sense. Rather, it is a process flowing from rights guaranteed by s. 35(1) of the Constitution Act, 1982. This process of reconciliation flows from the Crown’s duty of honourable dealing toward Aboriginal peoples, which arises in turn from the Crown’s assertion of sovereignty over an Aboriginal people and de facto control of land and resources that were formerly in the control of that people."

The Supreme Court of Canada concludes that the Crown owes this duty even before Aboriginal rights or title have been proven, stating at para. 35:

"But, when precisely does a duty to consult arise? The foundation of the duty in the Crown’s honour and the goal of reconciliation, suggest that the duty arises when the Crown has knowledge, real or constructive, of the potential existence of the Aboriginal right or title and contemplates conduct that might adversely affect it."

The Court goes on to provide an explanation in relation to the Crown’s duty to consult at para. 37:

"There is a distinction between knowledge sufficient to trigger a duty to consult and, if appropriate, accommodate, and the content or scope of the duty in a particular case. Knowledge of a credible but unproven claim suffices to trigger a duty to consult and accommodate. The content of the duty, however, varies with the circumstances, as discussed more fully below. A dubious or peripheral claim may attract a mere duty of notice, while a stronger claim may attract more stringent duties. The law is capable of differentiating between tenuous claims, claims possessing a strong prima facie case, and established claims. Parties can assess these matters, and if they cannot agree, tribunals and courts can assist. Difficulties associated with the absence of proof and definition of claims are addressed by assigning appropriate content to the duty, not by denying the existence of a duty."

The duty of the Crown to consult with Aboriginal peoples has been discussed in numerous court decisions since *Haida*, including several other Supreme Court of Canada decisions. However, there has not yet been a clear statement from the Supreme Court of Canada as to the role that a quasi-judicial decision maker such as the Board has in relation to this duty. While the Board acknowledges it may be somewhat beyond its accustomed area of decision-making in assessing the duty to consult issue, it accepts that it is generally appropriate for a quasi-judicial decision maker such as the Board to address constitutional questions which arise in the context of exercising its jurisdiction. The particular role of the Board in relation to the duty to consult issue may ultimately be clarified by the Supreme Court of Canada with the hearing of the appeal in *Carrier Sekani Tribal Council v. British Columbia (Utilities Commission)*, [2009] 4 W.W.R. 381(BCCA) and, if leave to appeal is granted, in *Standing Buffalo Dakota First Nation v. Enbridge Pipelines Inc.*, 2009 CarswellNat 3493(FCA). In the meantime the Board has concluded that it is appropriate to make a determination in relation to the Crown’s duty to consult in this Application.
The Board has reference to the words of the Supreme Court of Canada in *Haida* which state that the duty to consult is triggered if the Crown has knowledge of the potential existence of Aboriginal right or title and contemplates conduct that might adversely affect it. It is clear from the case law that the duty to consult is triggered at a low threshold. (*Mikisew Cree First Nation v. Canada (Minister of Canadian Heritage)*), [2005] 3 S.C.R. 388) Further the Crown is not entitled to narrowly interpret the facts and each case must be approached individually and with flexibility. (*Labrador Metis Nation v. Newfoundland & Labrador (Minister of Transportation & Works)*) (2007), 288 D.L.R. (4th) 641(NLCA))

During the proceeding the parties acknowledged that Nalcor represents the Crown and that CF(L)Co does not. Mr. Carot, on behalf of the Uashaunnuat, submitted that the constitutional duty to consult lies in the Crown and the Crown alone and agreed that Nalcor could consult in the name and on behalf of the Crown. (Transcript, Feb. 25, 2010, pg. 79/20-25) Mr. Schulze, on behalf of the Innus of Ekuanitshit, stated that the Board should make sure that Nalcor consults. (Transcript, Feb. 25, 2010, pg. 32/10-13)

Nalcor accepts that the Crown has knowledge of the potential existence of Aboriginal right or title and specifically states at para. 43 of its written submission:

> "The Conseil des Innus de Ekuanitshit and the Innu of Uashat Mak Mani-Utenam have asserted a potentially credible claim of an Aboriginal interest in relation to land and resource usage. Nalcor has accepted that there is a sufficiently credible claim to engage a duty of consultation in relation to the Lower Churchill Project itself."

The fundamental question that remains to be determined is whether the Crown, through Nalcor, is contemplating conduct which might adversely affect Aboriginal right or title through the implementation of the proposed water management agreement.

Consideration of this question is undertaken in the context of the legislated responsibility of the Board. It is notable that the Board does not have the general supervision of Nalcor or the other responsibilities usually associated with the regulation of a utility under the *Public Utilities Act*. The Board's responsibilities in relation to Nalcor are set out in the *EPCA* and relate to the required water management agreement between producers of power on a body of water. Section 5.4(1) of the *EPCA* states:

> "5.4(1) Two or more persons who have been granted rights by the province to the same body of water as a source for the production of power and who utilize, or propose to utilize, or to develop and utilize the body of water as a source for the production of power shall enter into an agreement for the purposes of achieving, with respect to the body of water, the policy objective set out in subparagraph 3(b)(ii)."

Where a water management agreement is reached the *EPCA* requires that the parties refer it to the Board for approval as proposed, approval with changes, or refusal. If the parties are not able to reach an agreement application may be made to the Board under section 5.5(1) of the *EPCA* to establish the terms of a water management agreement. In this case the Board is required to establish the terms
of an agreement within 120 days of the receipt of an application. The EPCA and the Regulations set out the particular requirements to be addressed by a water management agreement which, when approved or established by the Board, will govern the duties and responsibilities of the parties with respect to the production of power on the body of water.

The Agreement proposed by Nalcor in this Application under section 5.5 of the EPCA is essentially the framework by which it will co-ordinate its activities with CF(L)Co. The Agreement does not set out specifics in relation to water flows or energy production but sets up a scheme whereby this is managed by an Independent Coordinator and a Water Management Committee. Article 6.2 of the Agreement sets out the specific responsibilities of the Independent Coordinator:

"The Independent Coordinator shall, based on the information provided by the Suppliers, and in the exercise of reasonable judgement, establish short and long term Production Schedules for all Production Facilities on the Churchill River, through the coordination of production scheduling of the Suppliers based upon the use of the aggregate generating Capability, storage and transmission facilities of any Supplier on the Churchill River, in accordance with the objectives set out at Section 3(1) of the Regulations and with this Agreement."

Nalcor explains in PUB-NE-32 that the language of the Agreement requires that Nalcor and CF(L)Co, through the Water Management Committee and the Independent Coordinator, utilize "good utility practice" which includes a responsibility to act "in a manner which is consistent with laws and regulations and with due consideration for safety, reliability, environmental protection, and economic and efficient operations." Following from this the Independent Coordinator must have regard to reservoir levels, minimum flow requirements and any other regulatory or permit requirements when establishing production schedules for both suppliers. In addition Articles 5.5 and 6.2(d) of the Agreement expressly state that the Water Management Committee and the Independent Coordinator shall not act in a manner inconsistent with any provision of the Agreement, the EPCA, or the Regulations.

In PUB-NE-29 Nalcor states that the operating parameters for the Lower Churchill Project, in particular the reservoir levels and water flows, are set out in its environmental impact statement and that these operating parameters will be considered as part of the environmental review process. The operating regime (water levels) and the Aboriginal consultation appear to be ongoing issues in the environmental review process as set out in the January 26, 2010 letter from the Joint Review Panel to Nalcor which was filed in this Application on February 22, 2010. Nalcor states in PUB-NE-45 that the Agreement "is structured to operate in relation to whatever operating parameters are established through the environmental assessment and consultation processes."

The Board finds that the Agreement is a framework for Nalcor and CF(L)Co to work together to coordinate and maximize power production within established statutory, professional and industry standards and the limitations, restrictions and conditions imposed through the environmental review and project authorization process. The Board notes the significant number of permits, approvals and authorizations as detailed by Nalcor in PUB-NE-50 which may be required before the Lower Churchill Project can proceed. The Board accepts Nalcor's statement in PUB-NE-40 that no amendment to the Agreement would be necessary if the operating regime intended at this time is changed prior to project commissioning.
The issue for the Board is whether the conduct contemplated by the Crown might have an adverse impact on Aboriginal right or title. The conduct which is contemplated by the Crown in this case is the execution by Nalcor of a water management agreement with CF(L)CO. This distinguishes this case from the other authorities filed in this proceeding in relation to the duty to consult. The Board is not issuing a certificate of public convenience and necessity, is not approving the purchase and sale of power and energy, and is not authorizing any aspect of the physical development of the Lower Churchill Project. The necessary approvals and authorizations to enable the project to proceed will take place in other established processes apart from this proceeding. This Application is necessary only because there are multiple operators on the Churchill River and this proceeding does not replace or change any of the usual approvals and processes otherwise required in the development of the Lower Churchill Project. The Agreement manages the relationship of Nalcor and CF(L)Co leaving the details of the development, including the requirements and standards in relation to water flows, reservoir levels and other operating parameters, to be determined in accordance with the usual project approval processes, which includes a full environmental review. Therefore the Board cannot conclude that this Agreement might have an adverse impact on Aboriginal right or title and the Board finds that Nalcor does not have a duty to consult in relation to the Agreement.

In light of the Board’s finding that Nalcor does not have a duty to consult with respect to the water management agreement the motion to suspend pending consultation with the Intervenors is dismissed.

IV WATER MANAGEMENT AGREEMENT

1. Objectives of the EPCA and Regulations

Section 5.4(1) of the EPCA provides that two or more persons that have been granted rights by the province to the same body of water for the production of power must enter into an agreement “for the purpose of achieving with respect to a the body of water, the policy objective set out in subparagraph 3(b)(i).”

Section 5.5(1) states that:

“5.5(1) Where 2 or more persons to whom subsection 5.4(1) applies fail to enter into an agreement within a reasonable time, one or more of them may apply to the public utilities board to establish the terms of an agreement between them.”

The policy objective set out in section 3(b)(i) of the EPCA states:

"Power policy
3. It is declared to be the policy of the province that

(b) all sources and facilities for the production, transmission and distribution of power in the province should be managed and operated in a manner

(i) that would result in the most efficient production, transmission and distribution of power.”
In discharging its mandate the Board has a responsibility under section 4 of the *EPCA* to apply tests which are consistent with generally accepted sound public utility practice in implementing the power policy declared in section 3 of the *EPCA*.

The agreement referred to in section 5.4(1) of the *EPCA* is defined as a water management agreement in section 2(j) of the *Regulations*. Section 3(1) of the *Regulations* states the objective of a water management agreement:

"3(1) The objective of a water management agreement shall be the coordination of the power generation and energy production in the aggregate for all production facilities on a body of water to satisfy the delivery schedules for all suppliers on the body of water, in a manner that provides for the maximization of the long term energy-generating potential of a body of water, while ensuring that the provisions of a contract for the supply of power governed by section 5.7 of the Act are not adversely affected."

In assessing the proposed Agreement the Board is required to determine whether the Agreement satisfies the policy objectives as set out in section 3(b)(i) of the *EPCA* and section 3(1) of the *Regulations*. These policy objectives include efficiency considerations, sound public utility practices, and protection of prior power contracts. In addition section 3(2) of the *Regulations* identify the elements that must be included in a water management agreement, adherence to which must also be evaluated.

2. Efficiency Considerations

Nalcor and CF(L)Co submit that the efficiency policy and regulatory objectives of the *EPCA* are fulfilled by the proposed Agreement. This is achieved through mechanisms that ensure the reduction of spills, maintenance of sufficient reservoir elevation, and accounting for energy losses resulting from transmission and distribution of power, all subject to the suppliers’ delivery requirements and prior power contracts. Overall water management under the agreement is accomplished through coordination of flows and storage to maximize energy production.

Article 6.2 of the proposed Agreement sets out the duties of the Independent Coordinator which include a requirement that the Independent Coordinator not act in a manner inconsistent with any provision of the Agreement, the *EPCA*, the *Regulations*, or any procedures, directions or guidelines established by the Water Management Committee. The Water Management Committee is also subject to the same limitation on powers in Article 5.5 of the Agreement.

The purpose of coordinated production as contemplated by the *EPCA* and the proposed Agreement is to ensure that there is no wastage of water through spilling and that there is sufficient water at the Lower Churchill facilities while protecting existing power contracts. This represents efficient use of the available water and is consistent with the stated policy objectives of section 3(b)(i) of the *EPCA*. No parties challenged the proposed Agreement with respect to its adherence to the efficiency policy of the *EPCA*. The Board is satisfied that no amendments or additions to the proposed Agreement are required for the purpose of the efficiency policy objective set out section 3(b)(i) of the *EPCA*. 
3. **Sound Public Utility Practice**

Section 3(2) of the *Regulations* sets out the necessary components of a water management agreement. Section 3(2)(b) sets out the suppliers’ requirement to supply the Independent Coordinator with certain information “all prepared in a manner consistent with good utility practices”. Section 3(4) states:

“3(4) Each supplier, in complying with the requirements of subsection 3(2), shall:
(a) maintain its production facilities in serviceable and good repair; and
(b) operate its facilities in a manner not inconsistent with principles of good utility practice.”

The elements of what constitutes good utility practice are set out in section 2(d) of the *Regulations* which defines “good utility practice” as:

“2(d) ...those practices, methods or acts, including but not limited to the practices, methods or acts engaged in or approved by a significant portion of the electric utility industry in Canada, that at a particular time, in the exercise of reasonable judgment, and in light of the facts known at the time a decision was made, would be expected to accomplish the desired result in a manner which is consistent with laws and regulations and with due consideration for reliability, safety, environmental protection, and economic and efficient operations.”

No party to the Application disagreed that “sound public utility practice” as set out in the *EPCA* is synonymous with “good utility practice” as set out in the *Regulations*. In assessing whether the proposed Agreement is in accordance with sound public utility practice the Board must determine whether the terms of the Agreement require Nalcor and CF(L)Co to act in a manner which is consistent with laws and regulations and with due consideration for reliability, safety, environmental practice and economic and efficient operations.

The definition of “good utility practice” set out in section 2(d) of the *Regulations* has been carried forward into the proposed Agreement. Article 4.2 of the proposed Agreement requires CF(L)Co and Nalcor to adhere to the production schedules set by the Independent Coordinator provided that “in no event shall the Suppliers be required to operate in a manner which is inconsistent with Good Utility Practice...” Article 4.2 goes further to describe the required conditions for operations. Article 4.3 requires the suppliers to provide certain information to the Independent Coordinator “all prepared in a manner consistent with Good Utility Practice.”

The Board is satisfied that the proposed Agreement provides for the coordinated operation of the power production facilities in a manner consistent with good utility practice and that no further amendments or additions are required.
4. **Prior Power Contracts**

Section 5.7 of the *EPCA* states:

"5.7 A provision of an agreement referred to in section 5.4 or 5.5 shall not adversely affect a provision of a contract for the supply of power entered into by a person bound by the agreement and a third party that was entered into before the agreement under section 5.4 or 5.5 was entered into or established, or a renewal of that contract."

Four prior contracts are listed under Article 3.2 of the proposed Agreement. These are:

1. the power contract entered into between Hydro-Québec and CF(L)Co dated May 12, 1969 as well as Schedule III of such power contract which relates to its renewal (the "HQ Power Contract");
2. the Churchill Falls Guaranteed Winter Availability Contract between Hydro-Québec and CF(L)Co dated November 1, 1998, as amended on March 29, 2000 (the "GWAC");
3. the sublease entered into between Twin Falls Power Corporation Limited and CF(L)Co dated November 15, 1961, as amended in April 15, 1963, November 30, 1967 and July 1, 1974 and renewed pursuant to an agreement dated June 9, 1989, and the operating lease between the same parties dated November 30, 1967, as amended in July 1, 1974 and November 10, 1981 (the "Twinco Sublease"); and
4. the power contract entered into between Newfoundland and Labrador Hydro-Electric Corporation and CF(L)Co dated March 9, 1998, as amended on April 1, 2009 (the "Recall Power Contract").

As set out in section 5.7 of the *EPCA* these contracts are between a party bound by the proposed Agreement and a third party for the supply of power. These contracts were entered into prior to the coming into force of sections 5.4, 5.5 and 5.7 of the *EPCA* and the Regulations, are for the supply of power, and are between CF(L)Co and third parties.

In its pre-filed evidence (pg. 7) Nalcor notes that the Guaranteed Winter Availability Contract between Hydro-Québec and CF(L)Co is not, strictly speaking, a contract for the supply of power. According to Nalcor, since a generating unit is not dispatched, no power is supplied through this contract. However, as noted by Nalcor, if CF(L)Co maintains its unit availability under the Guaranteed Winter Availability Contract then its units will be available for delivery in the HQ Power Contract. For this reason Nalcor has agreed to include the Guaranteed Winter Availability Contract as a relevant contract in the proposed Agreement.

The terms of the proposed Agreement, as set out in Article 3.1, explicitly state that prior contracts cannot be adversely affected:

"3.1 **No Adverse Effect**

The parties acknowledge that pursuant to Section 5.7 of the Act, nothing in this Agreement shall adversely affect a provision of a contract for the supply of Power and Energy entered into by a Supplier and a third party prior to this Agreement, or a renewal of that contract (collectively "Prior Power Contracts"), and that all provisions of this Agreement and ancillary documents and agreements shall be interpreted accordingly."
In addition subsections 4.7(d), 6.3(a)(i) and 7.1(h)(i) also speak directly to the requirement to protect existing power contracts. No parties challenged the adherence of the proposed Agreement with Section 5.7 of the EPCA.

The Board is satisfied that the terms of the proposed Agreement ensure that existing power contracts and renewals of these contracts are not adversely affected. Existing prior contracts are expressly identified in Article 3.2. Under the terms of the proposed Agreement existing power purchasers will receive the same amount of power and energy, subject to the same limitations and contractual provisions.

5. Components of the Water Management Agreement

Section 3(2) of the Regulations sets out the specific mandatory provisions that are to be included in any proposed water management agreement. As part of its Application Nalcor provided a Table of Concordance which outlines the mandatory components of the proposed Agreement. In its December 10, 2009 submission CF(L)Co filed an identical proposed water management agreement and included a similar Table of Concordance which identified additional provisions which promote the objectives set out in the EPCA and the Regulations. The compliance of the proposed Agreement with the legislative requirements was further addressed by both Nalcor and CF(L)Co in responses to Board information requests. There were no objections or issues raised by any party as to the compliance of the proposed Agreement with the requirements set out in the EPCA and the Regulations.

The Board is satisfied, based on review of the proposed Agreement and further information filed by both Nalcor and CF(L)Co, that the requirements set out in section 3.2 of the Regulations have been incorporated in the proposed Agreement.

6. Reporting and Monitoring Requirements

In establishing or approving an agreement the Board may impose reporting and monitoring requirements as set out in subsection 5.6(2) of the EPCA:

"5.6(2) The public utilities board may require reporting commitments, and impose monitoring requirements, as it considers appropriate, to ensure that the persons to an agreement approved by the public utilities under subsection 5.4(3) or established under subsection 5.5(2) comply with the terms and conditions of the agreement."

In accordance with subsections 3(2)(g) and 3(2)(h)(ii) of the Regulations the proposed Agreement includes provisions for both record keeping and reporting. Article 4.6 requires each supplier to maintain the required records, for a period of no less than seven years, which must be available upon request to the Board or the Minister. Article 6.2(a)(1v) requires the Independent Coordinator to maintain similar records which shall also be made available to the Board or the Minister upon request. Article 6.2(a)(vi) also requires the Independent Coordinator to provide to the Minister and, on request, the Board, an annual report summarizing its activities in a form acceptable to the Minister.
In its written submission Nalcor states that the annual report should be a sufficient mechanism to provide information to both the Minister and the Board to demonstrate compliance by Nalcor and CF(L)Co with the terms and conditions of the Agreement. CF(L)Co agrees with this position, stating in its written submission that the annual reports by the Independent Coordinator, together with the Board's right to request documents kept by the suppliers and the Independent Coordinator, constitute sufficient provision to allow the Board to ensure compliance with the Agreement.

The Uashaunnuat requested that, if the Board establishes the terms of a water management agreement, the Board should provide for the monitoring of the consultation process with the Intervenors through the reporting requirements. (Written Submissions, pg. 34, paras. 183, 184 and 189)

In the context of the Board's finding that Nalcor does not have a duty to consult with respect to the proposed Agreement the provision requested by the Uashaunnuat is not necessary. The Board is satisfied that the Agreement contains sufficient provision for record keeping and reporting to allow the Board to discharge its oversight responsibilities with respect to compliance with the Agreement. The Board has access to these records and reports and may request this information at any time in its monitoring of the Agreement. No further reporting commitments or monitoring requirements are necessary at this time.

V   COSTS

Nalcor shall pay all expenses of the Board incurred in connection with this matter. The parties may apply to the Board for an order in relation to costs.
DATED at St. John's, Newfoundland and Labrador this 17th day of March 2010.
