The Board of Commissioners of Public Utilities
Prince Charles Building
120 Torbay Road, P.O. Box 21040
St. John's, NL A1A 5B2

Attention: Ms. Cheryl Blundon
Director Corporate Services & Board Secretary

Dear Ms. Blundon:

Re: The Board of Commissioners of Public Utilities Investigation and Hearing into Supply Issues and Power Outages on the Island Interconnection System – 2019-2020 Winter Readiness Planning Report – October Update- Revision 1

Please find enclosed one original and 12 copies of Revision 1 of Newfoundland and Labrador Hydro's 2019-2020 Winter Readiness Planning Report, October update.

Should you have any questions, please contact the undersigned.

Yours truly,

NEWFOUNDLAND AND LABRADOR HYDRO

List of Appendices

Appendix A: Status of Capital Projects Related to Winter Readiness

Appendix B: Status of Winter Readiness Testing of Plant and Equipment – Thermal Generation

Appendix C: Status of Winter Readiness Testing of Plant and Equipment – Hydraulic Generation

Appendix D: Master Generation Outage Schedule

Appendix E: Critical Spares Status Listing – Thermal Generation

Appendix F: Critical Spares Status Listing – Gas Turbine Generation

Appendix G: Critical Spares Status Listing – Hydraulic Generation

1.0 Background and Introduction

The Board of Commissioners of Public Utilities (“Board”), in correspondence dated October 13, 2016, directed Newfoundland and Labrador Hydro (“Hydro”) to provide an annual report detailing its winter readiness (“WR”) planning. This report, for the 2019-2020 winter season, addresses the following items as requested by the Board:

- 1.** The status of Annual Work Plan (“AWP”) items, in the format previously provided to the Board, for Hydro’s generating plants and transmission and terminal stations, including the completion date, outstanding items to complete, and any risks to completion or as a result of failure to complete;
- 2.** A description and schedule for all outstanding 2019 capital projects for Hydro’s generating plant and transmission and terminal stations, including progress on completion status to date and expected completion date;
- 3.** The identification of all equipment and plant testing to be carried out in advance of the winter period (generation plant, emergency diesels, black start generators, fire systems, transmission system equipment), including progress on completion status to date;
- 4.** The planned generation outage schedule for the period September to December 31, 2019, including an explanation for any planned outages extending beyond December 1, 2019;
- 5.** An update of critical spares assessment and procurement;
- 6.** The forecast loads and expected generation capacity and reserves (setting out the basis for calculation) for the upcoming winter, as of December 1, 2019, including capacity assistance agreements in place or planned; and,
- 7.** An identification of any risks that could impact the WR of assets as of December 1, 2019 and associated contingency plans.

This report also includes additional details in Section 7 in response to correspondence received from the Board on August 28, 2019.

1 Except where otherwise noted, information presented in this report covers both the Island
2 Interconnected System and the Labrador Interconnected System for the period ending October 31,
3 2019.¹

4 **2.0 Annual Work Plan and Winter Readiness Status**

5 Hydro's AWP integrates all planned activities for the year (i.e., corrective maintenance ("CM"),
6 preventive maintenance ("PM"), and capital project support) that are critical to safe and reliable
7 production. Hydro regularly measures the progress of its AWP execution, in comparison with the plan,
8 and is able to track the AWP status down to the level of individual work plan items. The individual AWPs
9 for various assets are incorporated into an integrated AWP.

10
11 In previous years, Network Services activities were included with Transmission and Rural Operations. For
12 2019 reporting, AWP and WR activities for Network Services are shown separately. This approach aligns
13 with Hydro's operational organization and provides added visibility to this important function.

14
15 This report provides a consolidated summary of operation and maintenance progress, both for the
16 entire AWP (i.e., first chart in each set) and the WR tasks (i.e., second chart in each set), as of October
17 18, 2019, for each of the following areas of operations:

18 **1.** Holyrood Thermal Generating Station ("Holyrood TGS"):

- 19 **a.** Units 1, 2, and 3; and
20 **b.** Balance of Plant, including black start diesels.

21 **2.** Gas Turbines:

- 22 **a.** Holyrood;
23 **b.** Hardwoods;
24 **c.** Stephenville; and
25 **d.** Happy Valley.

26 **3.** Hydraulic Generation:

- 27 **a.** Bay d'Espoir;

¹ The data used to generate the status charts in Section 2.0 reflects a data cutoff date of October 18, 2019.

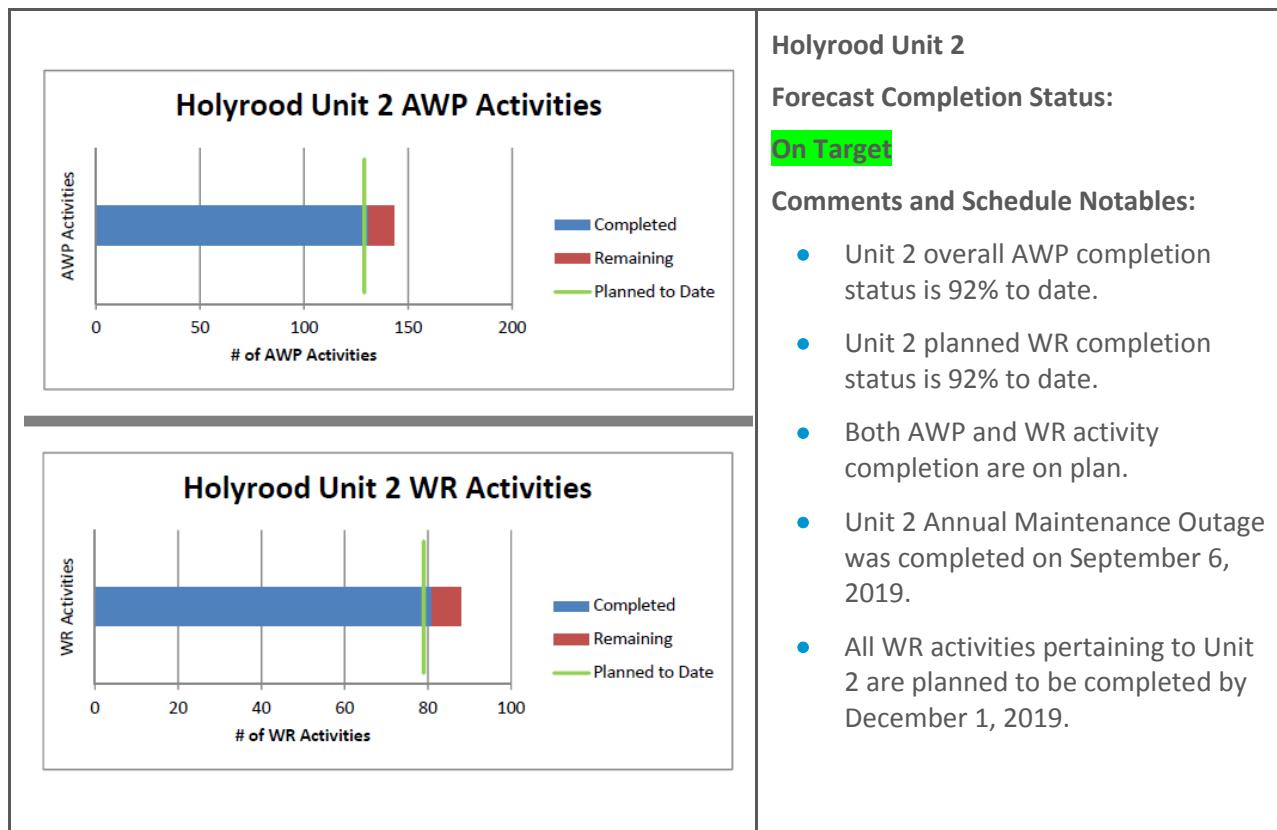

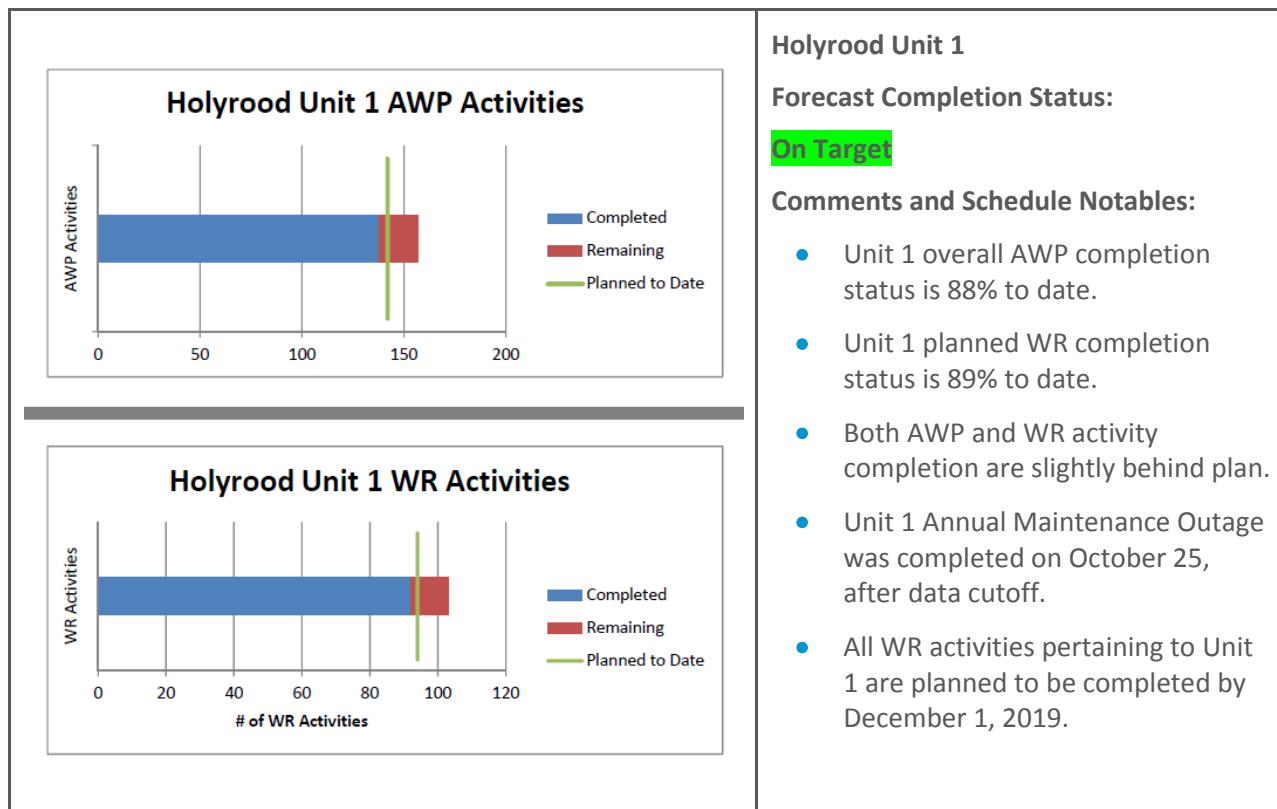

- 1 **b.** Cat Arm;
 - 2 **c.** Hinds Lake;
 - 3 **d.** Paradise River;
 - 4 **e.** Upper Salmon; and
 - 5 **f.** Granite Canal.
- 6 **4.** Transmission and Rural Operations for the Island Interconnected System and Labrador
 - 7 Interconnected System:
 - 8 **a.** Transmission; and
 - 9 **b.** Terminal Stations.
 - 10 **5.** Network Services.

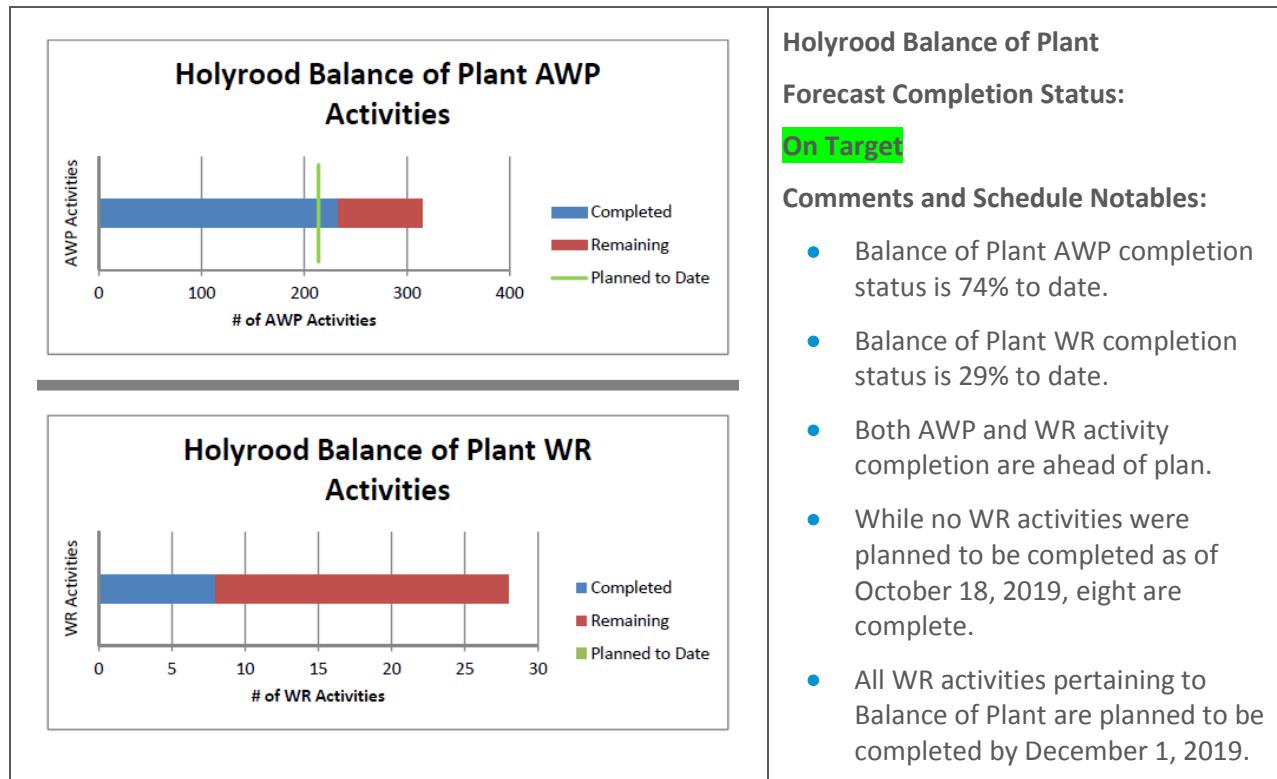

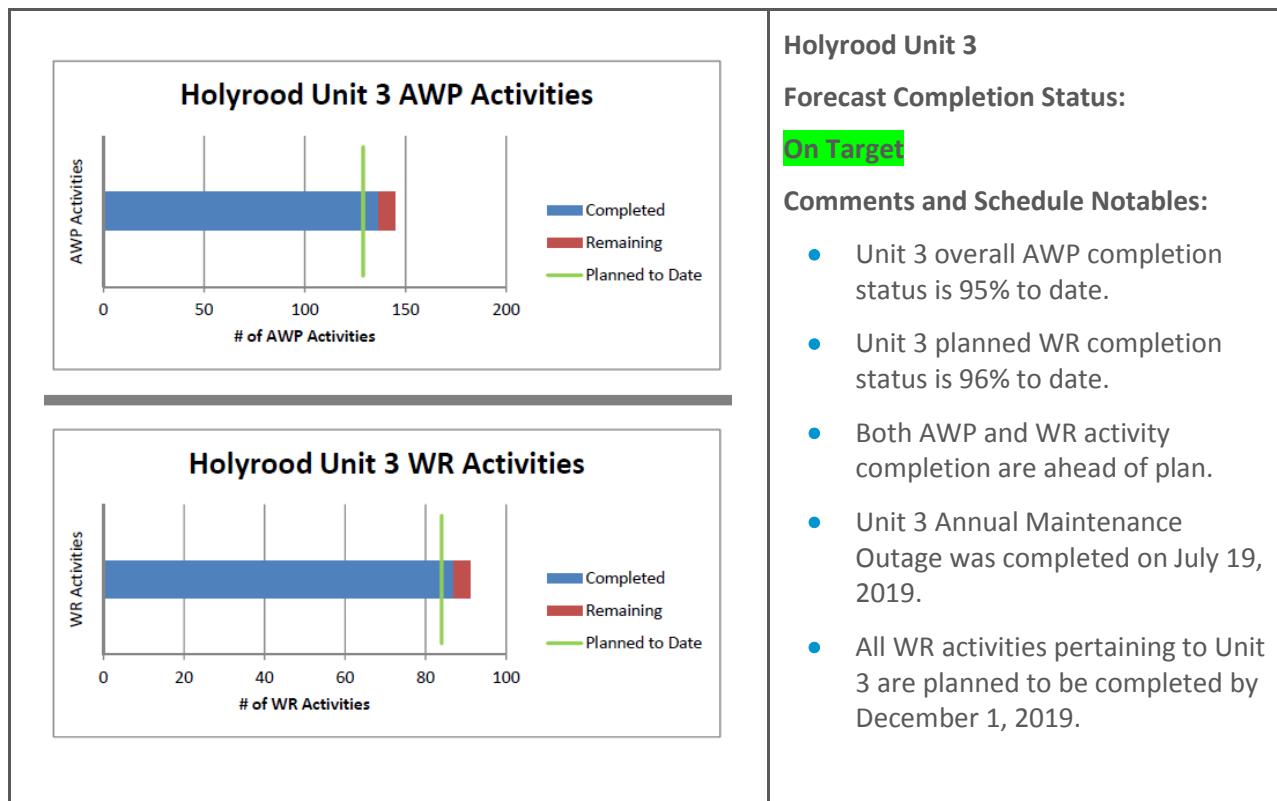

11
12 Each chart includes the completed and remaining AWP and WR tasks, as well as an indication of the
13 planned task completion target to date.

14
15 A text box adjacent to each chart set indicates Hydro's forecasted completion status as of October 18,
16 2019 in relation to AWP and WR activities (i.e., Green: On Target, Yellow: Caution – Recovery Required,
17 Red: Target Will Not be Fully Met). Relevant highlights are also provided.

18 **2.1 Thermal Generation**

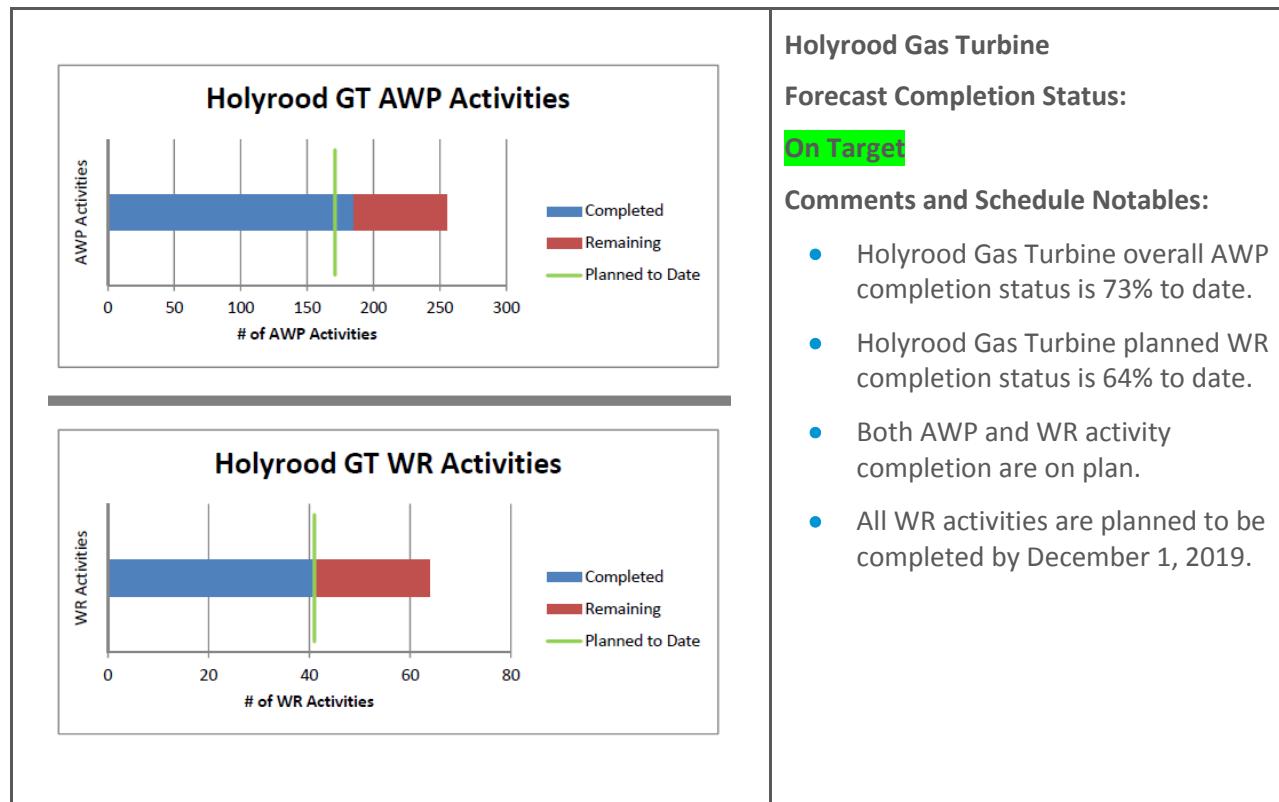

19 The status of AWP and WR execution at the Holyrood TGS is summarized in the charts below. As noted,
20 all planned 2019 WR work is expected to be complete by December 1, 2019.

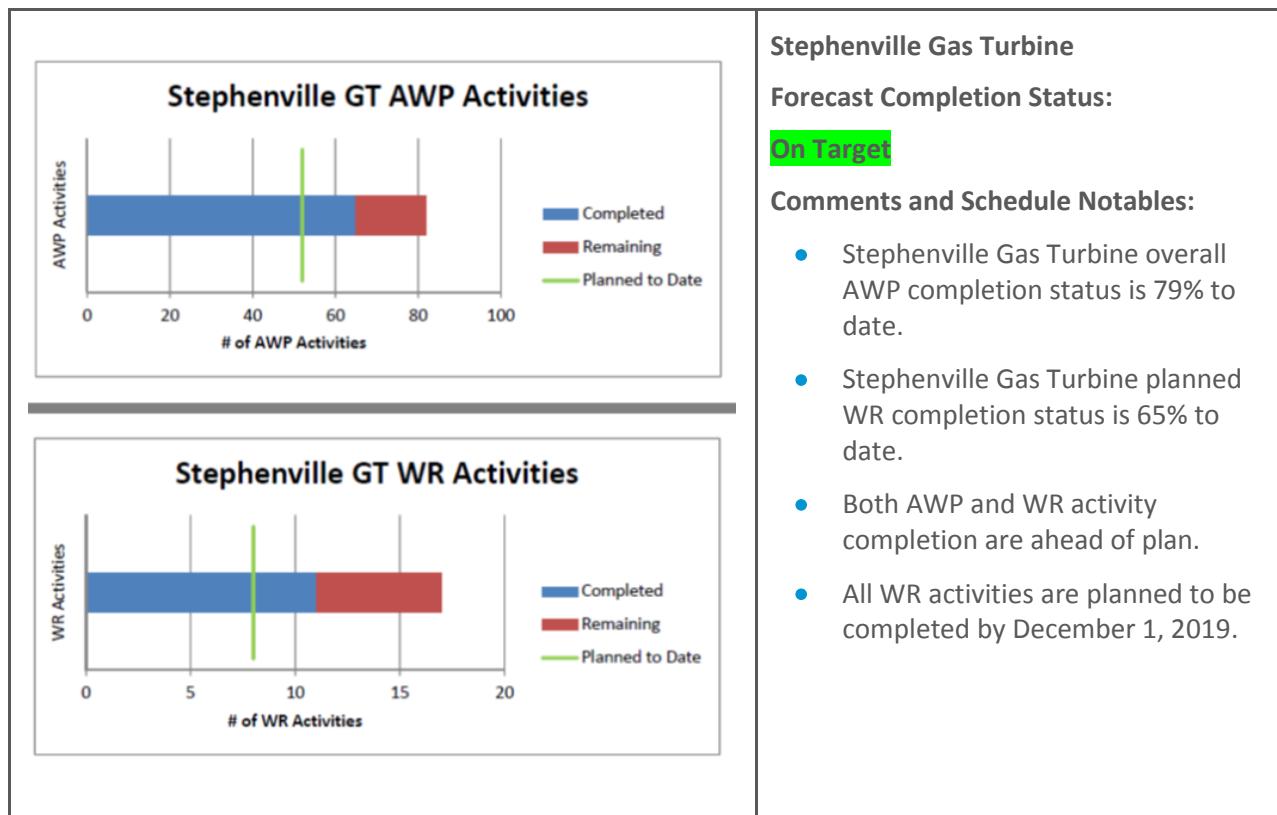

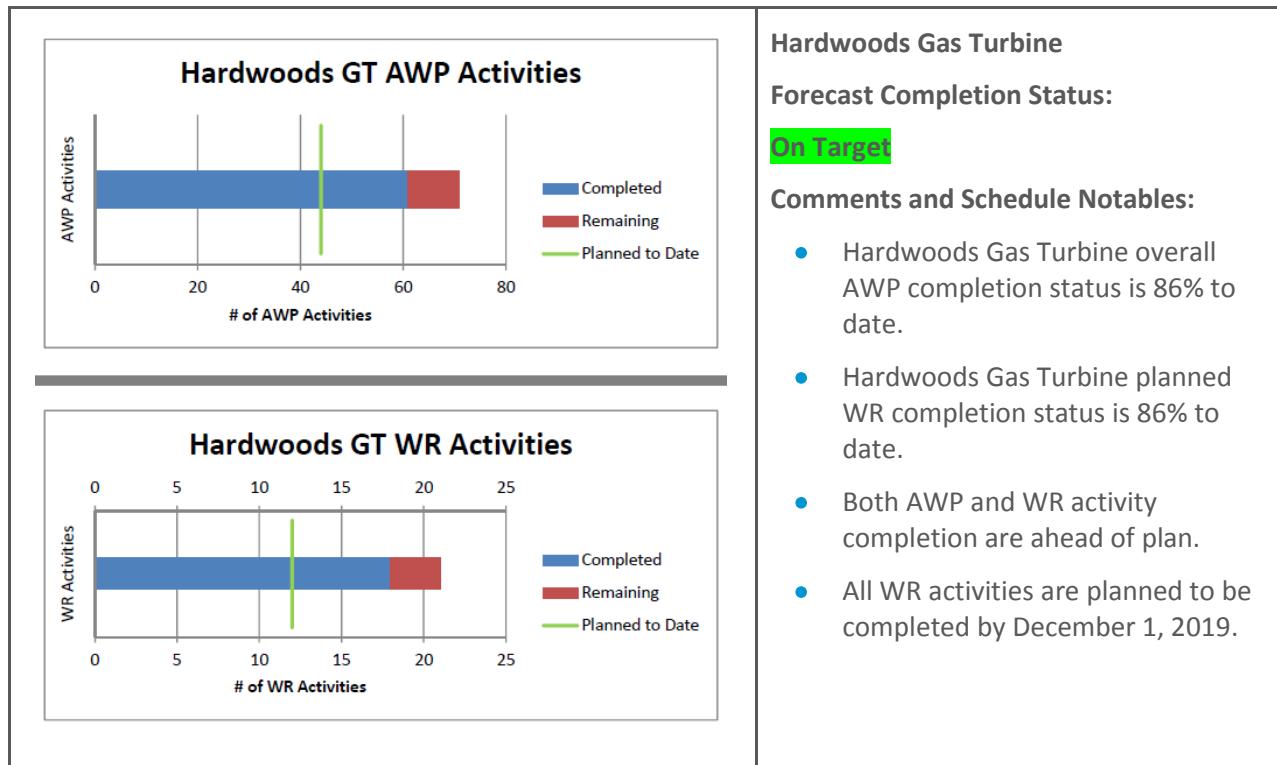

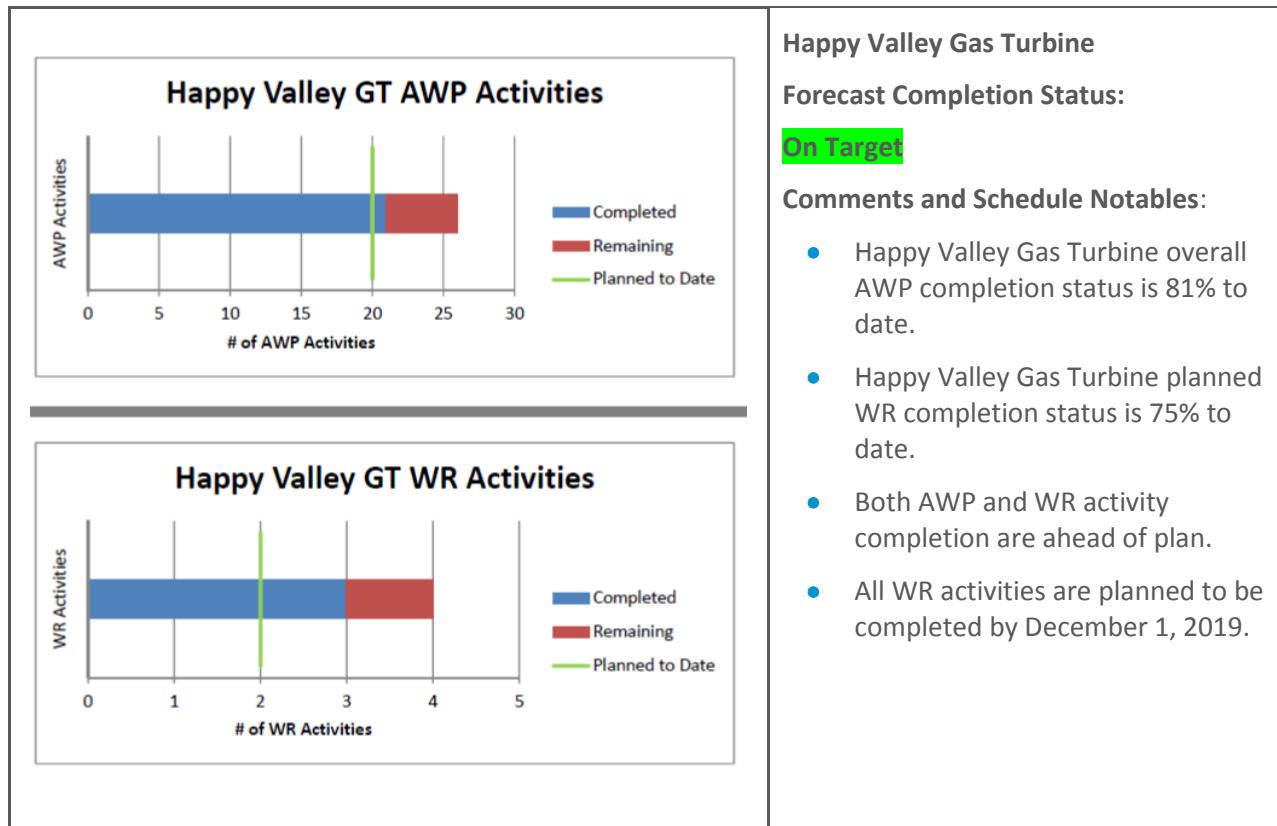

2.2 Gas Turbine Generation

The current status of AWP and WR execution at the Holyrood, Hardwoods, Stephenville, and Happy Valley Gas Turbines are summarized in the following charts. Planned WR work for all gas turbines is on target for completion by December 1, 2019.

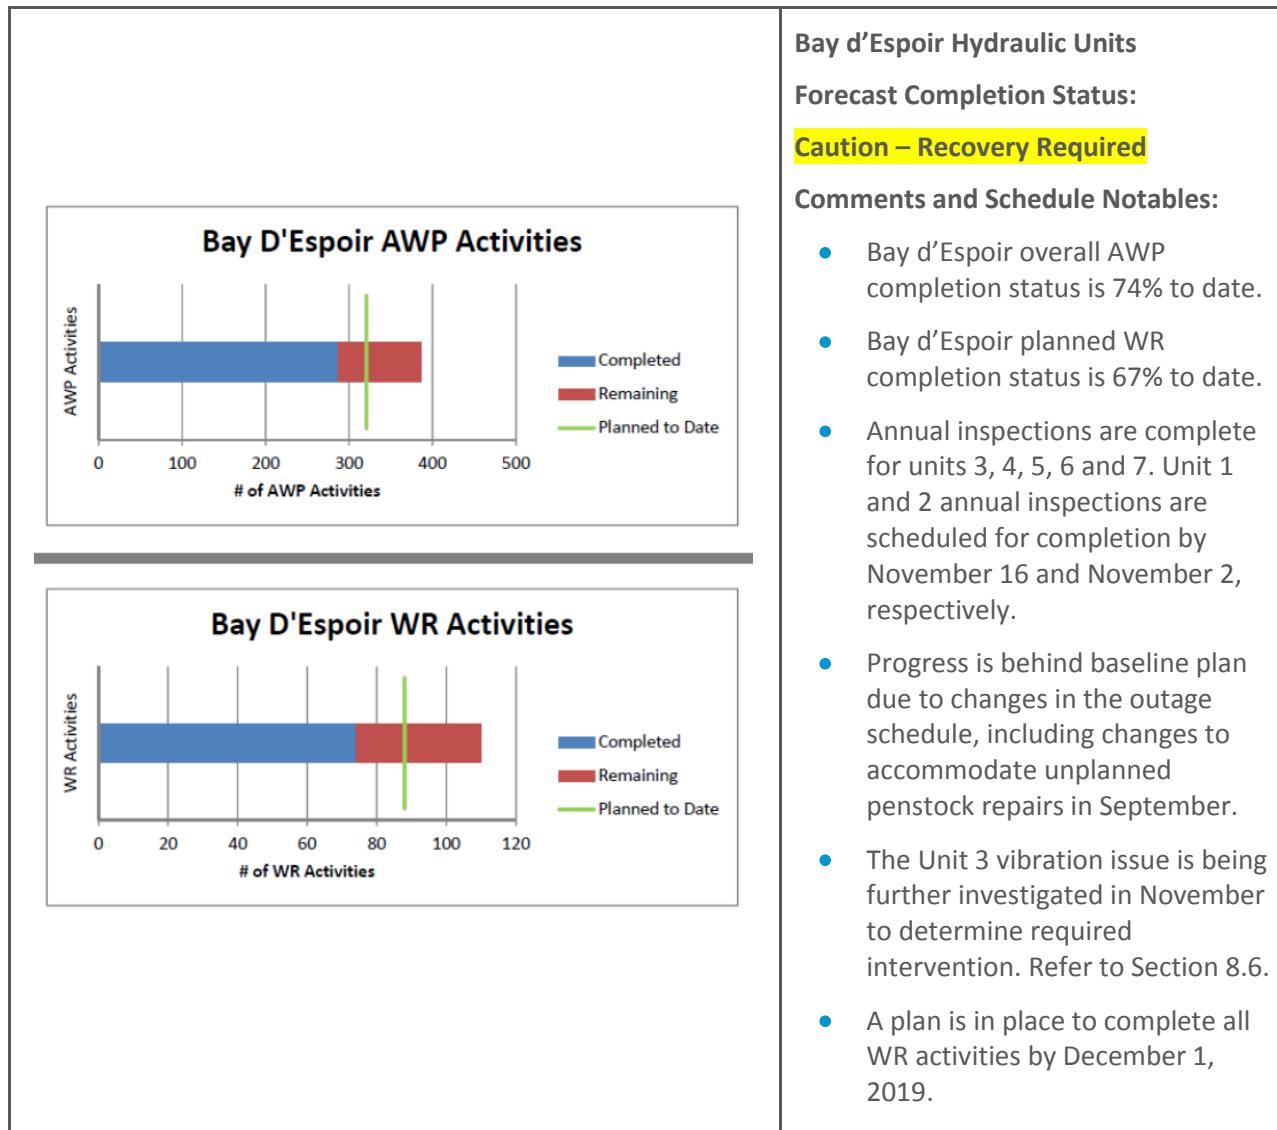

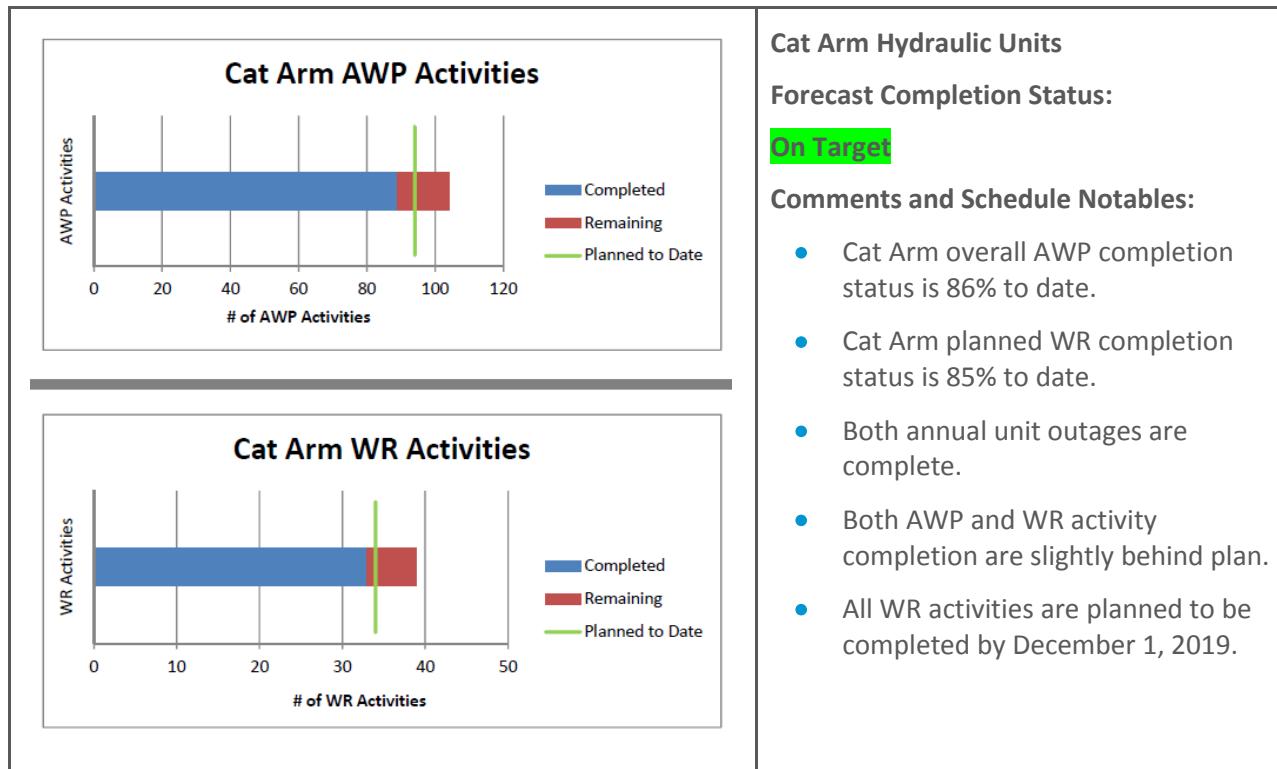

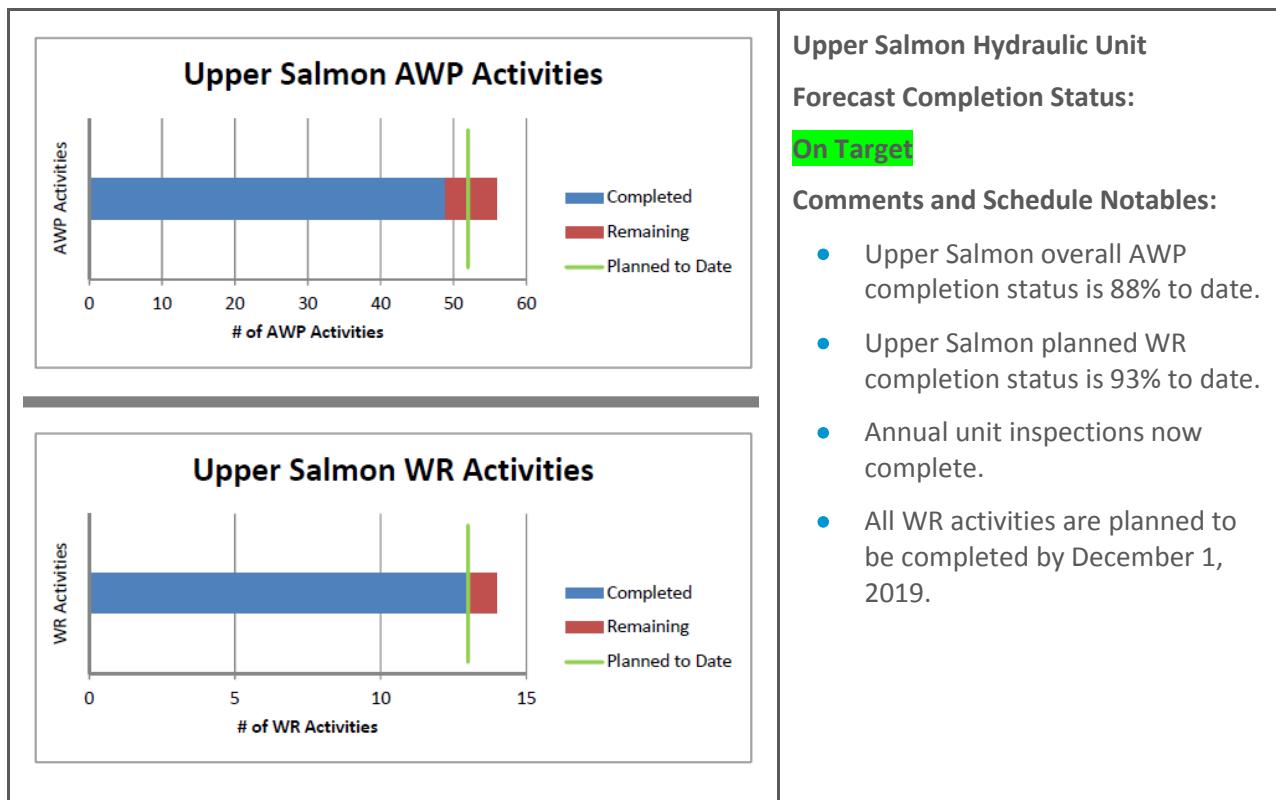

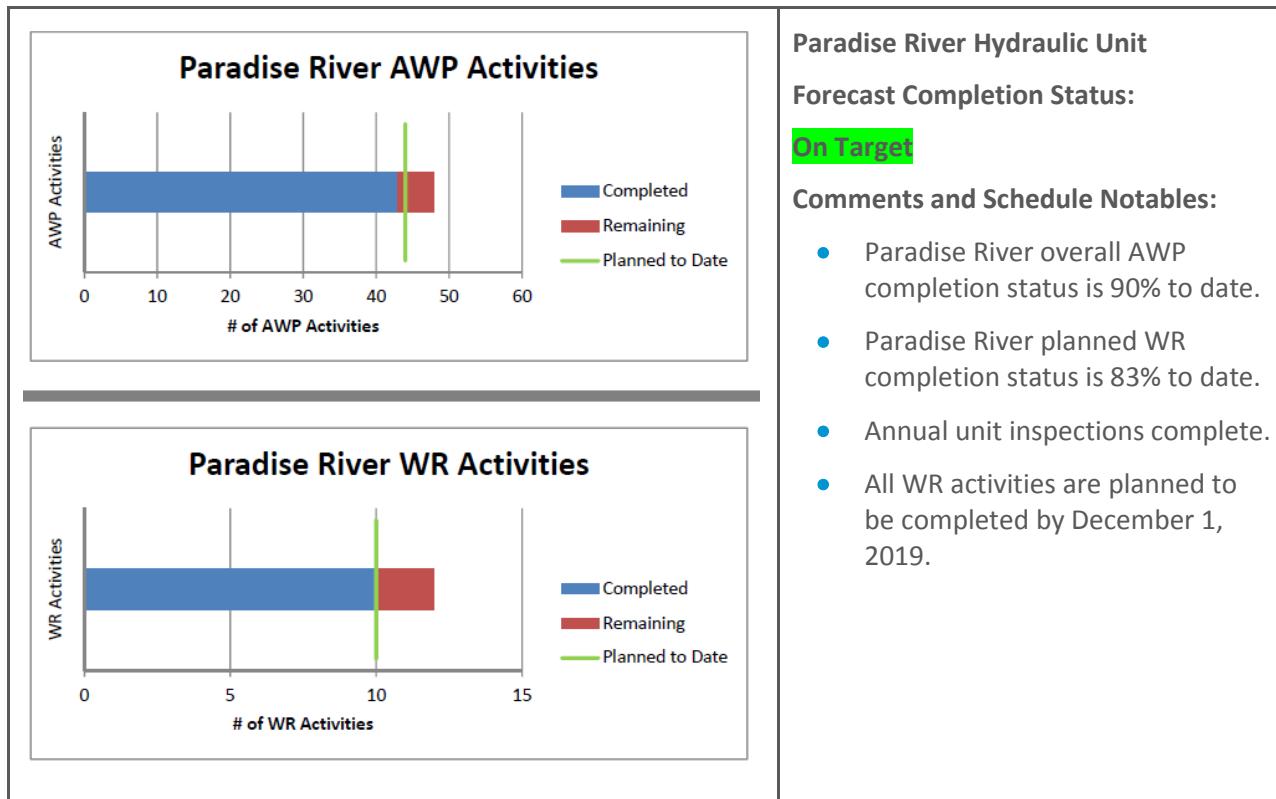

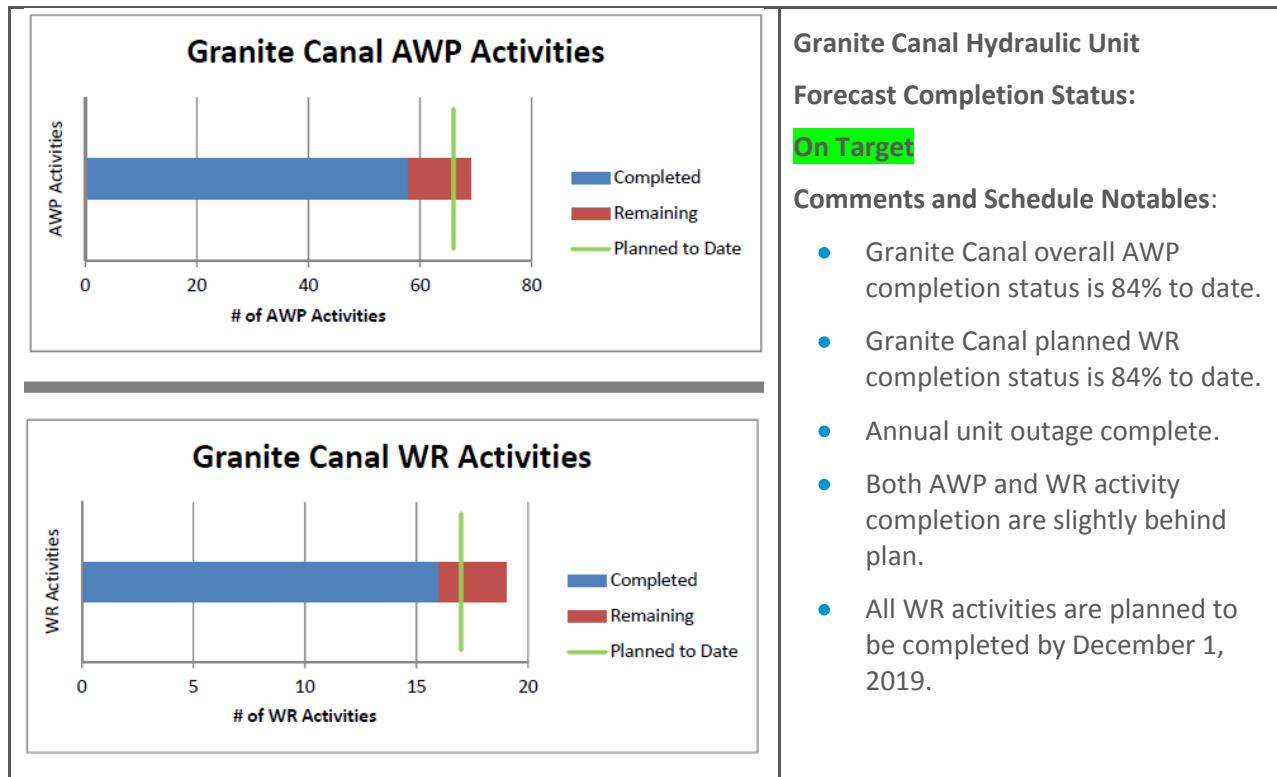

1 2.3 Hydraulic Generation

- 2 The current status of AWP and WR execution at Bay d'Espoir and other hydraulic generation facilities is
3 summarized in the charts below. Hydro expects that all planned WR activities will be completed by
4 December 1, 2019.

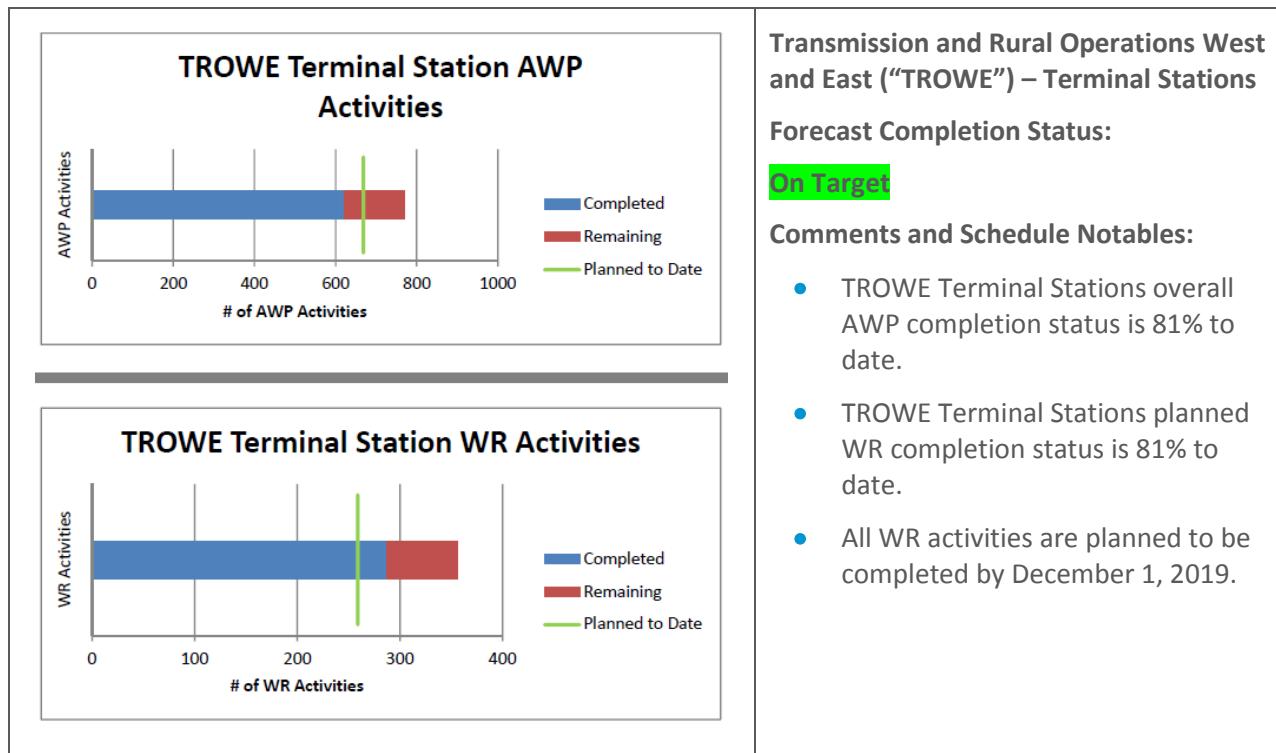

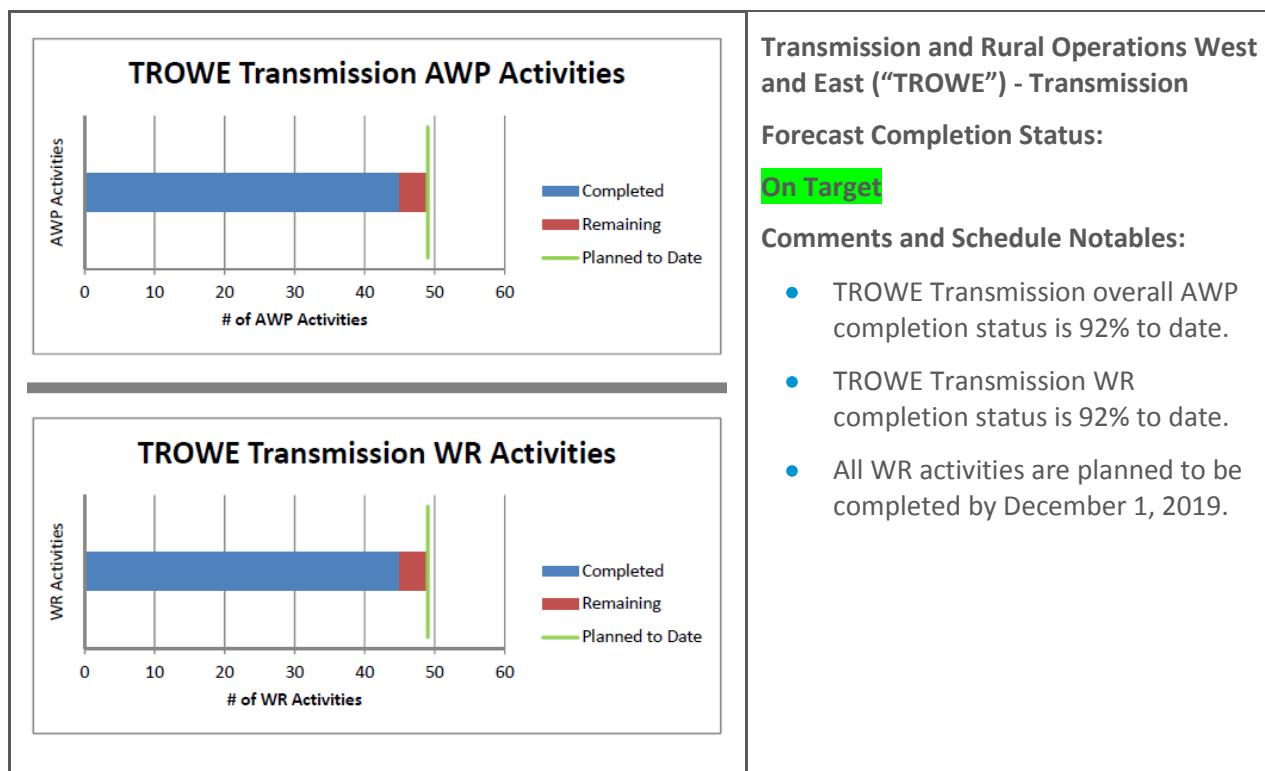

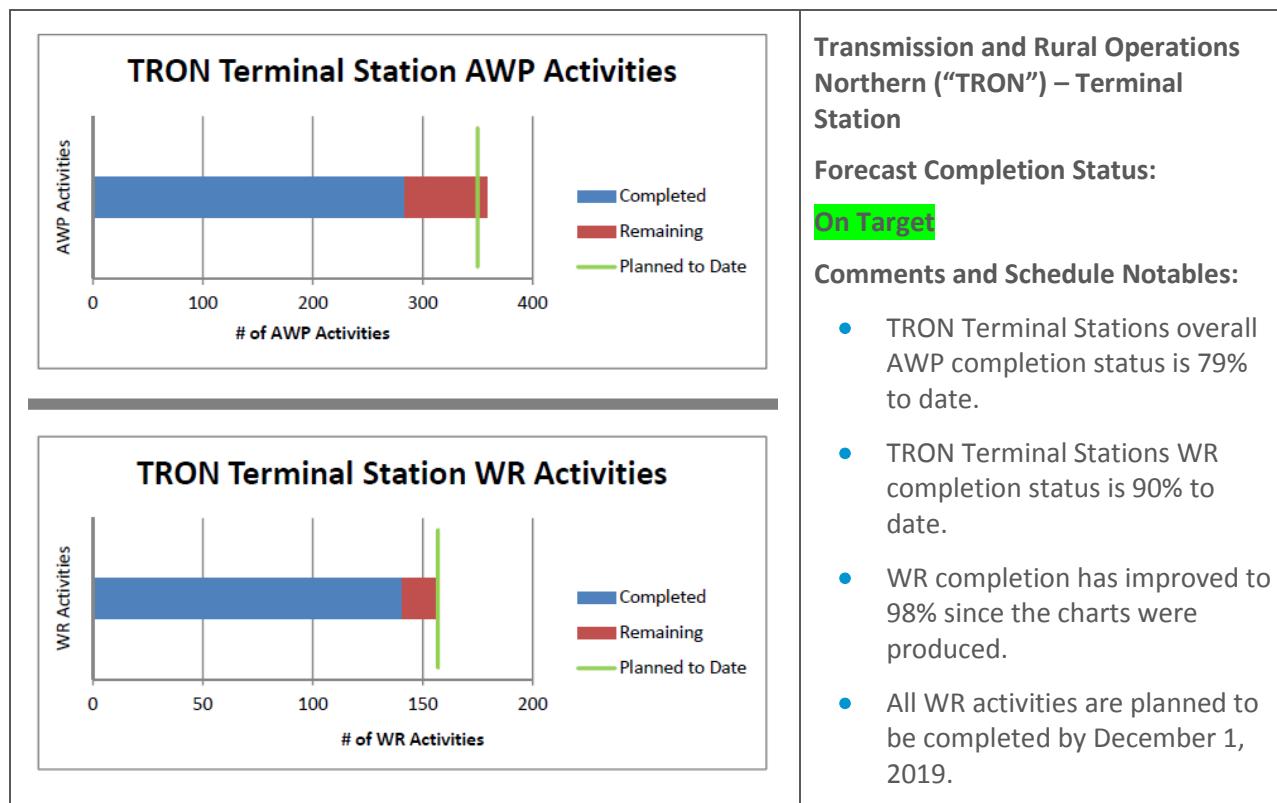

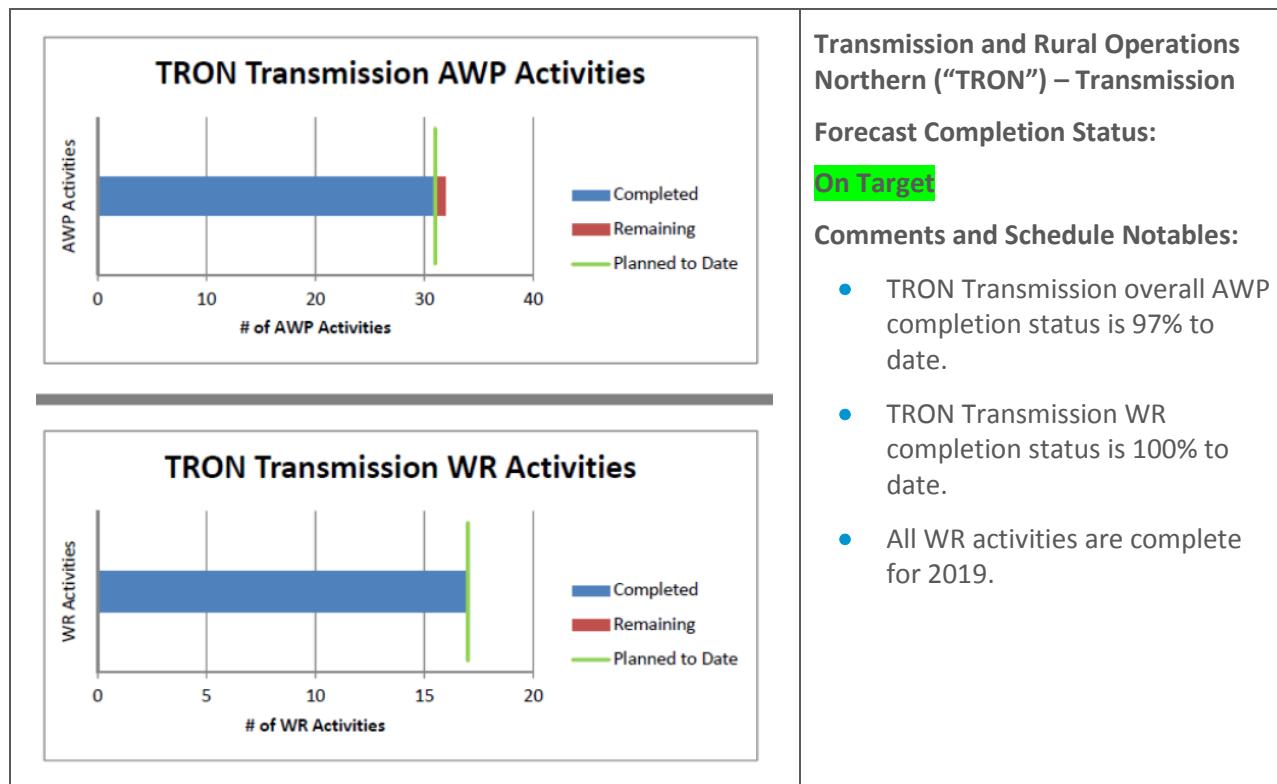

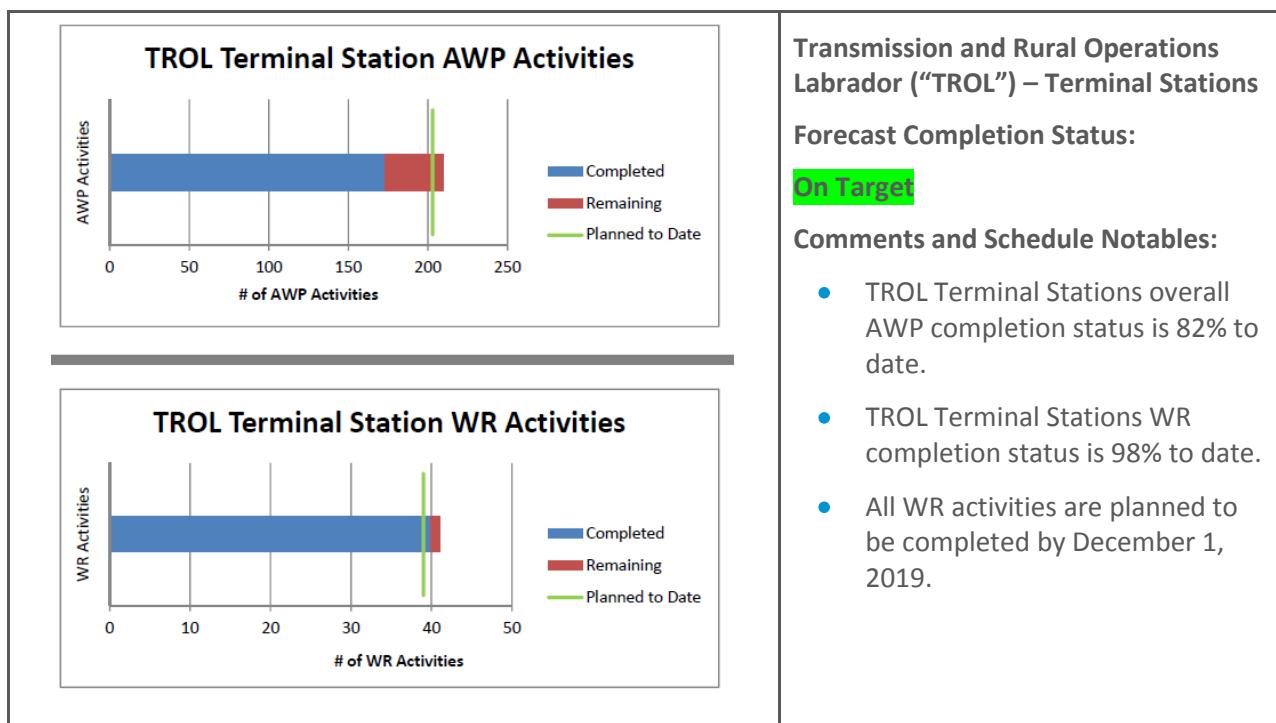

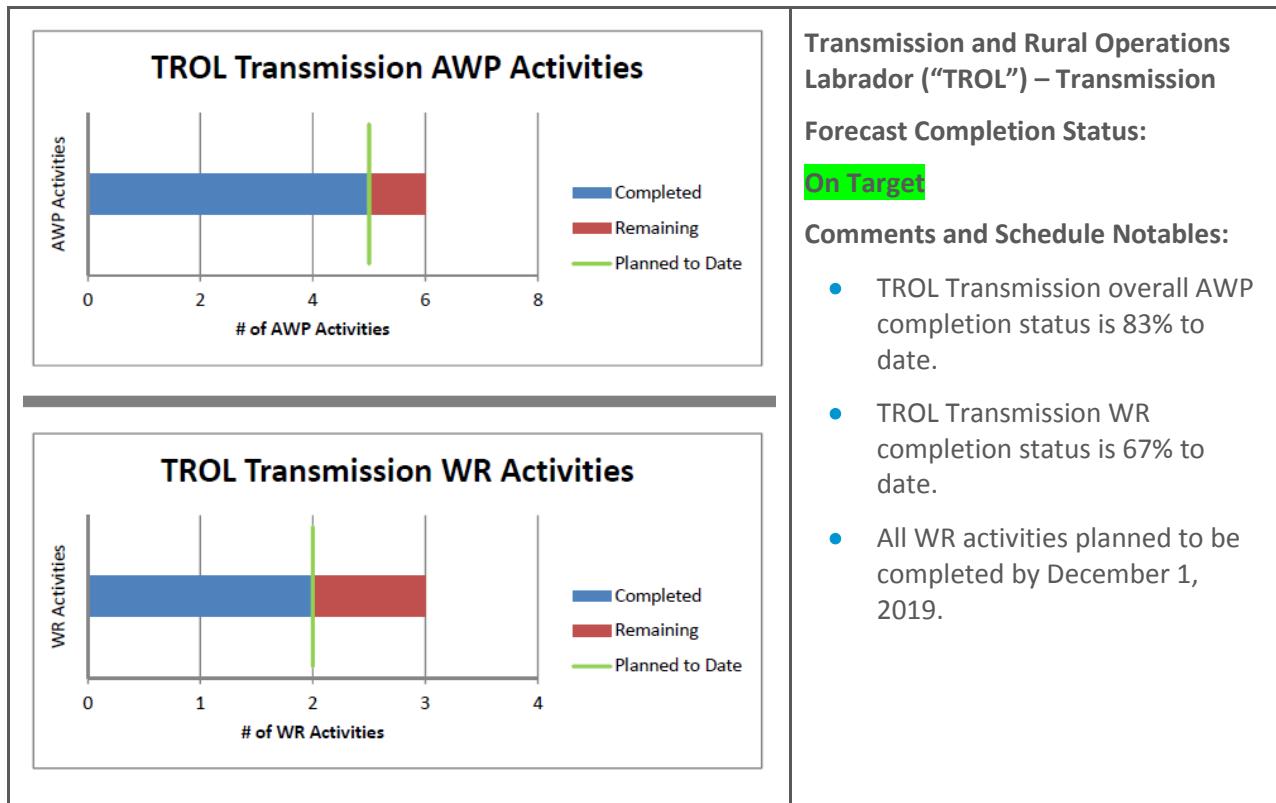

1 2.4 Transmission and Terminal Stations

2 The current status of AWP and WR execution for both transmission line and terminal station facilities on
3 both the Island Interconnected System and the Labrador Interconnected System are summarized in the
4 charts below. As noted, Hydro expects that all planned WR activities will be completed by December 1,
5 2019.

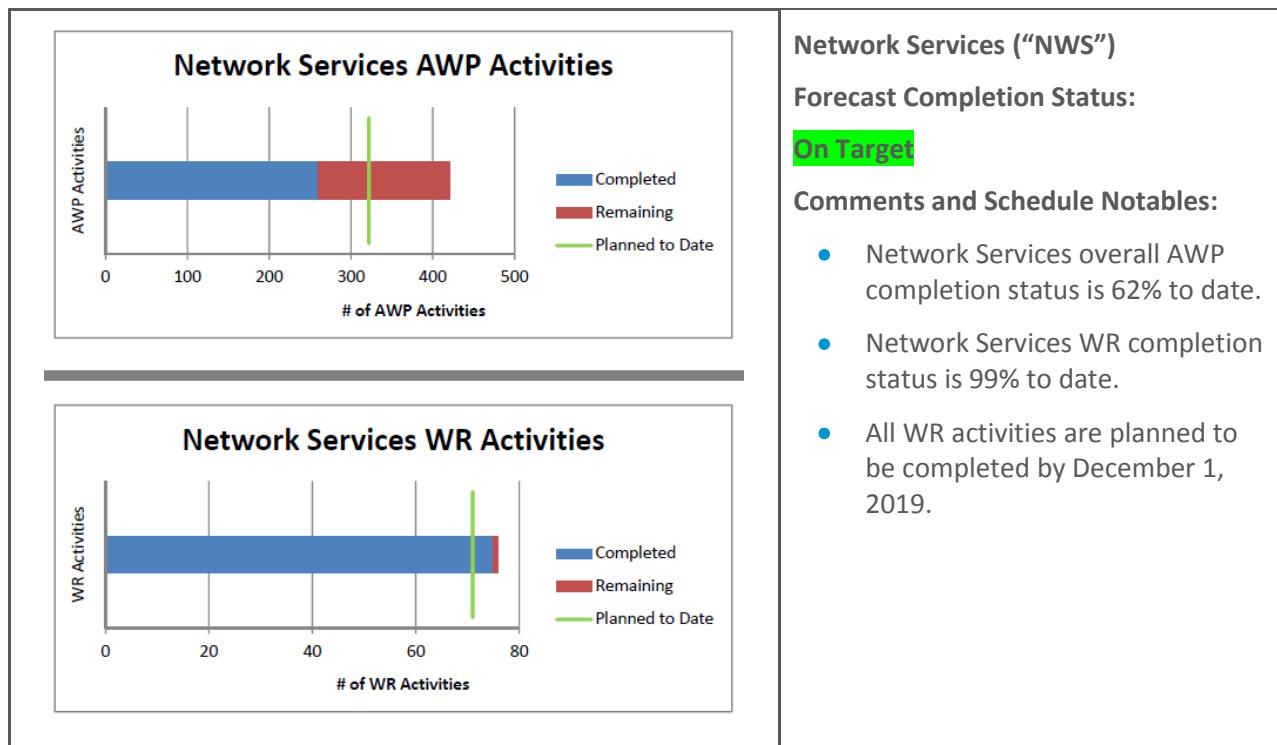

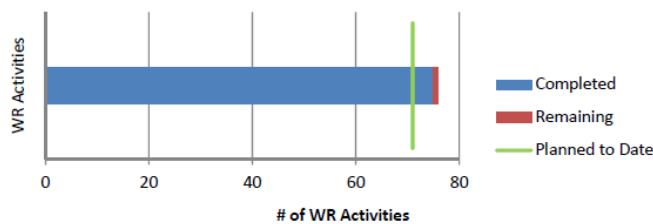

1 2.5 Network Services

2 The current status of AWP and WR execution for Network Services is summarized in the charts below. As
3 noted, Hydro expects that all planned WR activities will be completed by December 1, 2019.

Network Services WR Activities

4 3.0 Status of Winter Readiness for Capital Projects

5 Appendix A of this report provides the status of 2019 planned capital projects that include scope related
6 to 2019-2020 WR for the Island Interconnected System and the Labrador Interconnected System. Table
7 1 summarizes the status of the WR scope of these projects by asset category.

Table 1: Status of Capital Projects with WR Scope

Asset Category	Complete as of October 30, 2019	Incomplete, Expected Completion by December 1, 2019	Incomplete, Expected Completion after December 1, 2019	Total
Hydraulic Generation	2	1	1	4
Thermal Generation	1	0	0	1
Gas Turbine Generation	0	3	0	3
Terminal Stations	4	3	0	7
Transmission	1	0	0	1
Total	8	7	1	16

- 1 As of October 31, 2019, the WR scope for eight of the sixteen capital projects is complete. The WR scope
2 for seven projects is partially complete, with full completion expected by December 1, 2019. The PM9
3 inspection for Unit 1 at Bay d’Espoir will be completed after December 1, 2019 and is further discussed
4 in Section 8.
- 5
- 6 The project to Replace Main Fuel Valves at the Hardwoods Gas Turbine was previously reported in this
7 section but is not required for WR. The valves currently installed at Hardwoods are functioning normally
8 and there are three spare valves available.
- 9
- 10 There are no significant risks to completing the remaining planned WR scopes of work.

4.0 Plant and Equipment Testing

- 11 To ensure WR, Hydro follows a structured checklist for planning and documenting its testing and
12 inspection of plant and equipment in its thermal and hydroelectric generation facilities, as provided in
13 Appendix B and C, respectively.
- 14
- 15 In its transmission, terminal station, network services, and gas turbine operations, Hydro relies on its
16 AWP process to plan and track its WR testing and inspection of these assets. The AWPs in these areas
17 include planned PM activities and CM items; both of which involve inspection and testing. Planned PMs
18 and CMs, and any other activities pertaining to WR, are flagged inside the respective AWPs and may be
19 tracked separately from other AWP items that are not WR related.
- 20

4.1 Thermal Generation

- 21 WR testing of generating equipment in Thermal Generation is focused primarily around annual unit
22 maintenance outages. Following these annual outages, units are run up and synchronized and all
23 systems are verified before the unit’s operating status is determined and preparedness is confirmed.
24 Unit load tests are performed at this time as well. It can take a period of time for system conditions to
25 allow for all required load testing. The WR testing protocol includes the testing of appropriate Balance of
26 Plant components, including the black start diesel generators².

² The black start diesel generators are run up to speed and synchronized on a weekly basis to confirm their availability. The function of all associated breakers were also tested and confirmed.

1 The current status of equipment/plant testing for Thermal Generation is indicated in Appendix B of this
2 report. Consistent with the generation outage schedule shown in Appendix D, all units have been
3 returned to service and it is expected that all WR testing will be completed by December 1, 2019. Units 1
4 and 2 have not yet been tested to full load due to system restrictions (system load too low) that
5 prevented the units from being operated to full load. Unit 1 has been operated to 155 MW and Unit 2 to
6 165 MW. Unit performance at these loads indicates that there are no risks in achieving full load
7 capability on both units. Full load testing will be completed when system demands allow. Unit 3 has
8 been operated at 150 MW, which is the maximum capability for this unit.

9 **4.2 Gas Turbine Generation**

10 Examples of WR activities that are included in the AWP work scopes and maintenance plans for the
11 Holyrood, Hardwoods, Stephenville, and Happy Valley Gas Turbines include the following:

- 12 a. PMs and CMs for major components and auxiliary systems;
13 b. Black start testing;
14 c. Monthly operational testing; and
15 d. Execution of capital upgrades and refurbishment.

16
17 AWP charts, which include WR activities, are shown in Section 2.2 of this report. Black start testing has
18 been completed at the Happy Valley and Holyrood Gas Turbines. Black start testing of the Hardwoods
19 and Stephenville Gas Turbines require additional engineering as equipment replacement and system
20 modifications at these gas turbines, and the adjacent switch yards, require modification of the black
21 start test procedures. The remaining black start tests are planned for completion during the month of
22 November 2019. It is expected that all work related to WR testing will be completed by December 1,
23 2019.

24
25 Operational testing of all gas turbines has been carried out throughout the year as planned.

26 **4.3 Hydraulic Generation**

27 WR testing of generating equipment in Hydraulic Generation is focused primarily around annual unit
28 maintenance outages. Following these annual outages, units are run up and synchronized and all
29 systems are verified before the unit's operating status is determined and preparedness is confirmed.

1 Unit load tests are also performed at this time. The WR testing protocol includes the testing of
2 appropriate Balance of Plant components.
3
4 The majority of inspection and testing of the hydraulic generation facilities has been completed.
5 Outages have been scheduled to complete all remaining WR items and, to date, work is being completed
6 as scheduled. Some work has been shifted due to changes in the outage schedules, but all outstanding
7 inspections and testing are planned for completion by November 29, 2019. At this time, there are no
8 constraints that will impact the inspection or testing of the remaining facilities.

9 **4.4 Transmission and Terminal Stations**

10 **4.4.1 Transmission**

11 The summary of maintenance, refurbishment, and replacement criteria that Hydro uses for its
12 transmission lines was included in the “Transmission and Terminal Station Asset Management Execution
13 Report”, submitted to the Board on April 11, 2019. The report includes criteria for Wood Pole and Steel
14 Structure Line Management Programs, helicopter patrols, ground patrols, infrared inspections, wood
15 pole treatment, and right-of-way maintenance.

16 **4.4.2 Terminal Stations**

17 The “Terminal Station Asset Management Overview” document includes the maintenance,
18 refurbishment, and replacement criteria used by Hydro for Terminal Station assets. Version 4 of this
19 document was included in the “Terminal Station Refurbishment and Modernization” project report in
20 Hydro’s 2020 Capital Budget Application.

21 **4.4.3 Transmission and Terminal Station Testing**

22 The AWPs for both Transmission and Terminal Stations are predominantly comprised of PMs and CMs,
23 which inherently involve inspection and testing. Examples of WR activities that are included in the AWP
24 work scopes include the following:

- 25 a. Transformer PMs and CMs;
- 26 b. Annual exercises on all high voltage circuit breakers;
- 27 c. Exercise of 230 kV circuit breakers from protection during PM inspections;
- 28 d. Infrared scans at all terminal stations;

- 1 e. Annual ultrasonic leak testing on all terminal station air systems; and
- 2 f. Annual helicopter patrol of transmission lines prior to the winter season.
- 3
- 4 AWP charts, which include WR activities, are shown in section 2.4 of this report, and Hydro expects that
- 5 all WR activities will be completed by December 1, 2019.

6 **4.5 Network Services**

7 The AWP for Network Services is comprised of PMs and CMs, which inherently involve inspection and
8 testing of various assets and systems. AWP charts, which include WR activities, are shown in Section 2.5
9 of this report, and it is expected that all WR activities will be completed by December 1, 2019.

10 **5.0 Generation Outage Schedule**

11 Hydro's 2019 Master Generation Outage Schedule for the period September 1 to December 31, 2019 is
12 attached to this report as Appendix D. This schedule currently does not contemplate any planned
13 generation outages for Hydro assets beyond November 30, 2019; Hydro expects that all generation
14 assets will be fully available as of December 1, 2019.

15 **6.0 Critical Spares**

16 **6.1 Overview**

17 In 2014, Hydro completed extensive reviews of its critical spares requirements in all three areas of its
18 generation operations: hydraulic generation; thermal generation (Holyrood TGS); and the gas turbines in
19 Hardwoods and Stephenville. These reviews included a detailed analysis of asset criticality and spare
20 parts in reference to several factors, including impact on generation reliability and replacement part
21 availability. A second phase of spares analysis was completed in 2017 for Hydro's hydraulic generation
22 facilities and 569 additional items were added to the critical spares list.

23

24 Hydro's evaluation of critical spares is an ongoing process with consideration given to asset condition,
25 level of criticality, parts availability/order lead time, and cost. In some cases, a balanced consideration of
26 these factors may result in a decision to not procure into inventory where the risk to reliability is judged
27 to be low and/or other measures are available to mitigate against generation unavailability.

1 Included in this report is a full update on the status of Hydro's critical spares, as of October 31, 2019, for
2 the 2019-2020 winter season. This update includes a detailed listing of critical spares requirements for
3 each area of generation operations and the in stock or on order status of each item.

4 **6.2 2019-2020 Winter Season**

5 Hydro's critical spares status leading into the 2019-2020 winter season is robust. For Thermal
6 Generation (Appendix E), Gas Turbines (Appendix F), and Hydro Generation (Appendix G), a total of
7 2,515 critical spares have been identified by Hydro's three generation operations areas. Of this total,
8 2,362 items are in stock (94%), 48 items are on order (2%) and the remaining 105 items (4%) are in
9 various stages of the procurement process (e.g., engineering specification preparation to determine
10 proper replacement parts for items that can no longer be readily purchased or purchase orders drafted
11 to enable item ordering).

12 **6.2.1 Thermal Generation**

13 As summarized in Table 2, there are twelve critical spare stock items currently not in stock. Eleven of
14 these items are on order through Hydro's Supply Chain Department. For one item, "Primary Contact for
15 Generator P.T." an order has not been placed because the OEM for this part is no longer in business. The
16 Plant Electrical Engineer is working with another supplier to source this part. Of the eleven parts on
17 order, five are from Hitachi for the Unit 3 turbine. Requests to expedite these parts have been made but
18 have been put in a queue by Hitachi while they are filling critical orders from other customers. Should
19 there be a failure of one of these components, Hitachi will give these orders guaranteed priority. The
20 remaining six parts are expected to be on site by the end of 2019. An update on the status of all the
21 remaining outstanding items will be provided for the December 10, 2019 WR Report.

22

23 The complete list of critical spares for Holyrood TGS is provided in Appendix E. Note that this list
24 contains three Inventory Status descriptions; "In Stock", "Non Stock", and "On Order." "In-Stock" means
25 that the part is in inventory; "Non-Stock" means that the part is critical but it is not necessary to keep it
26 in stock, for example because the part is readily available locally; and "On Order" means that the part is
27 required to be in stock but is not. For the "Non Stock" parts, an explanation of the reason why it is "Non-
28 Stock" is provided in the "Notes" column in the Appendix E table.

Table 2: Critical Spares – Thermal Generation

Total Identified Critical Spare Items	756
Number of Critical Spare Items In Stock	744
Number of Items On Order	11
Number of Items not yet On Order	1

1 **6.2.2 Gas Turbines**

- 2 Table 3 summarizes the status of spare parts for the Hardwoods, Stephenville and Holyrood Gas
3 Turbines and Appendix F contains detailed list for each gas turbine.

Table 3: Critical Spares – Gas Turbine Generation

	Hardwoods/Stephenville	Holyrood	Total
Total Identified Critical Spare Items	93	463	556
Number of Items In Stock	76	339	415 (74.6%)
Number of Items On Order	1	36	37 (6.7%)
Number of Items not yet On Order	16	88	104 (18.7%)

- 4 The spares list for the Hardwoods and Stephenville Gas Turbines is detailed in Appendix F and contains
5 the critical spares identified for these units. This list contains 93 critical and operational spare items.
6 Approximately 82% (76) of these spares are in stock. Of the remainder, one is on order, nine are in the
7 procurement process and seven require additional engineering prior to procurement.
8
9 The spares list for the Holyrood Gas Turbine is also detailed in Appendix F and includes both operational
10 and critical spares for this unit. This list contains 463 critical and operational spare items. Greater than
11 73% (339) of these spares are in stock, including all high priority items. Of the remainder, 36 are on
12 order, 40 are in the procurement process, and 48 require additional engineering prior to procurement.
13
14 Of the 37 items on order, one is a capital spare which is expected to be on site by December 1, 2019.
15 Items that are not yet ordered require further engineering and original equipment manufacturer input
16 due to changes in the technical specifications or changes in part numbers related to these components.
17 These items are being ordered as the specification and part numbers for these parts are determined.
18 These items include lower priority critical spares as well as non-critical spare items and pose a very low
19 risk to operation if not on hand by December 1, 2019.

1 Hydro has utilized a number of its spare parts to address deficiencies found during the 2019
2 maintenance season. This has resulted in a reduction of the in-stock items. These items have been
3 identified and are currently on order or in the procurement process. Maintenance outages are currently
4 planned for the Holyrood and Stephenville Gas Turbine sites in November 2019, which may result in the
5 requirement to replenish additional spare components.

6 **6.2.3 Hydraulic Generation**

7 Table 4 provides an overview of the critical spares program for Hydro Generation and Appendix G
8 contains detailed spares lists for the various facilities.

Table 4: Critical Spares – Hydraulic Generation

Total Identified Critical Spare Items	1203
Number of Critical Spare Items In Stock	1203
Number of Items On Order	0
Number of Items not yet On Order	0

9 As noted in the previous report, the remaining item to be delivered for 2019 was the Hinds Lake Station
10 Service Transformer. The transformer was delivered on October 15, 2019; however, the grounding
11 resistor was found to be damaged and was returned to the manufacturer for repair and testing. The
12 repaired component is expected to be delivered before November 30, 2019.

13 **7.0 Near-Term Reliability and Resource Adequacy**

14 This section discusses the near-term reliability and resource adequacy of the Newfoundland and
15 Labrador Interconnected System for the upcoming winter period. The reliability indices in this near-term
16 report include both annual and monthly Loss of Load Hours (“LOLH”), Expected Unserved Energy
17 (“EUE”), and Normalized EUE³ for the period of October 1, 2019 to December 31, 2020. The analysis
18 considers the different types of generating units (i.e., thermal, hydro, and wind) in Hydro’s fleet,
19 contractual sales, transmission constraints, peak load, load forecast uncertainty, and capacity assistance
20 programs. Similar to previous analyses, a range of projected availabilities was considered for the
21 Holyrood TGS.

³ Normalized EUE provides a measure relative to the size of the assessment area. It is defined as: [(Expected Unserved Energy)/(Net Energy for Load)] x 1,000,000 with the measure of per unit parts per million.

1 The analysis in this section of the report has been completed using Hydro's reliability model.⁴ This is the
2 same model that was used in the “Reliability and Resource Adequacy Study” (“RRA”), filed in November
3 2018, and the “Near-Term Generation Adequacy Report,” filed in May 2019 (“May Report”), with
4 updates to reflect current system assumptions. A detailed discussion of the modelling approach used
5 can be found in Volumes I and II of the RRA. The items discussed in this section are focused on the
6 changes from the May Report and incorporate requests made by the Board in its correspondence to
7 Hydro dated August 28, 2019. Specifically, the Board requested that Hydro update the reliability metrics
8 for Scenario 5 of the May Report to incorporate any changes that may have occurred since that time and
9 should incorporate the following:

- 10 ● Labrador-Island Link (“LIL”) unavailability until June 1, 2020;
11 ● Expected capacity assistance available;
12 ● Expected available import power over the Maritime Link; and
13 ● Holyrood thermal Derated Adjusted Forced Outage Rates (“DAFOR”) of 15%, 18%, and 20%.

14
15 Hydro intends to file a complete update of its assessment of near-term reliability and resource adequacy
16 through 2024 as part of its annual update of the RRA, to be filed with the Board on November 15, 2019.

17 **7.1 Assumptions**

18 **7.1.1 Asset Performance**

19 Hydro updates its assumptions for forced outage rates for all generation assets on an annual basis.⁵
20 For Hydro-owned generating units, reliability metrics are compiled and used on an annual basis. These
21 metrics were updated in early 2019 to include 2018 data and were used to support Hydro’s analysis in
22 the May Report. Consistent with the Board’s request to update reliability metrics, Hydro recalculated
23 the DAFOR for near-term analysis with data for 2019 year-to-date included. Inclusion of the year-to-date
24 data in the weighted three-year average results in a lower DAFOR for hydraulic units (2.5% vs the 2.8%
25 used in Hydro’s May Report). This would result in lower calculated values for Hydro’s reliability metrics
26 (LOLH, EUE, and normalized EUE). Given the conservative intent of Hydro’s near-term analysis, and that
27 inclusion of data for 2019 year to date does not represent a full calendar year, Hydro has continued to

⁴ Additional information on operational reserve by week at time of peak is available in Appendix D.

⁵ Forced outage rates are updated consistent with the Forced Outage Rates Methodology presented in Hydro’s RRA, filed with the Board on November 16, 2018.

- 1 use the reliability metrics for 2019 presented in the May report in this analysis. Forced outage rates used
2 in this analysis are presented in Table 5.

Table 5: Forced Outage Rates - Hydro-owned Assets

Asset	Reliability Metric
Hydraulic Units	DAFOR = 2.8%
Holyrood Thermal Units	DAFOR = 15%, 18%, 20%
Holyrood Gas Turbine	DAUFOP = 1.7%
Happy-Valley Gas Turbine	DAUFOP = 9.8%
Stephenville Gas Turbine	DAUFOP = 30%
Hardwoods Gas Turbine	DAUFOP = 30%
Diesels	DAUFOP = 6.2%

- 3 For units not owned by Hydro, the forced outage rates used in Hydro's modelling are determined using
4 industry averages. Updated forced outage rates used for assets owned by a third party in this analysis
5 are presented in Table 6.

Table 6: Forced Outage Rates - Third-party Owned Assets

Asset	Reliability Metric
Hydraulic Units	DAFOR = 5.7%
Gas Turbines	DAUFOP = 13.6%
Corner Brook Cogen	DAUFOP = 15.8%

6 **7.1.2 Labrador-Island Link Assumptions**

- 7 In correspondence to the Board dated August 8, 2019, Hydro provided an update regarding the progress
8 of the commissioning activities associated with the LIL. In this correspondence, Hydro indicated that the
9 LIL would be undergoing dynamic commissioning from mid-October 2019 to mid-February 2020 and
10 would be out of service for an additional period from mid-April to mid-May 2020. This would result in
11 the LIL being unavailable for the majority of the winter period.

12

- 13 Based on this update, in correspondence dated August 28, 2019, the Board requested that Hydro
14 incorporate a LIL outage until June 1, 2020 into its base assumptions. Hydro has performed its analysis
15 assuming that the LIL is unavailable until June 1, 2020 in all cases.

16 **7.1.3 Availability of Capacity Assistance Agreements**

- 17 Capacity assistance refers to curtailable load and customer generation available to the utility under
18 contracts to provide capacity on an as needed basis. Hydro currently has a capacity assistance contract
19 with Corner Brook Pulp and Paper for up to 105 MW, as approved by the Board in Board Order No. P.U.

1 40(2018). In this analysis, Hydro modelled this capability at the 2018 tested value of 100.4 MW. Hydro is
2 in discussion with Vale Newfoundland and Labrador Limited (“Vale”) to renew its capacity assistance
3 agreement for assistance to be provided from its on-site diesel generators. This would make an
4 additional 7.6 MW available to the Island Interconnected System for the coming winter operating
5 season. Hydro is working towards having this agreement in place prior to December 1, 2019. As such,
6 both agreements have been included in Hydro’s modelling.

7 **7.1.4 Availability of Maritime Link Imports**

8 The Maritime Link is expected to be available to import energy during the 2019-2020 winter operating
9 season. Hydro successfully imported energy over the Maritime Link through the 2018-2019 winter
10 operating season. To date, Hydro has been focused on purchasing energy to offset higher cost thermal
11 energy on both a short term and longer term basis.

12
13 While all of Hydro’s market purchases have been made on an economic basis, Hydro has been also been
14 successful in making market purchases that have had system reliability benefits. As an example, Hydro
15 experienced high customer demand during the period from February 19-26, 2019, with a system record
16 peak of 1,784 MW on February 20, 2019. During that period, Hydro chose to seek imports on an
17 economic basis, but also to increase system reliability. Power was imported for 94% of hours during that
18 week, with purchases fulfilled as requested in all but four hours; during two of those hours a transaction
19 was not achieved, during the other two hours a deal was achieved for a portion of the volume
20 requested. Figure 1 shows imported quantities over the Maritime Link during that time period. In Figure
21 1 it can be observed that Hydro was successful in importing in excess of 125 MW for prolonged periods
22 of time, with a maximum import of 185 MW for four hours.

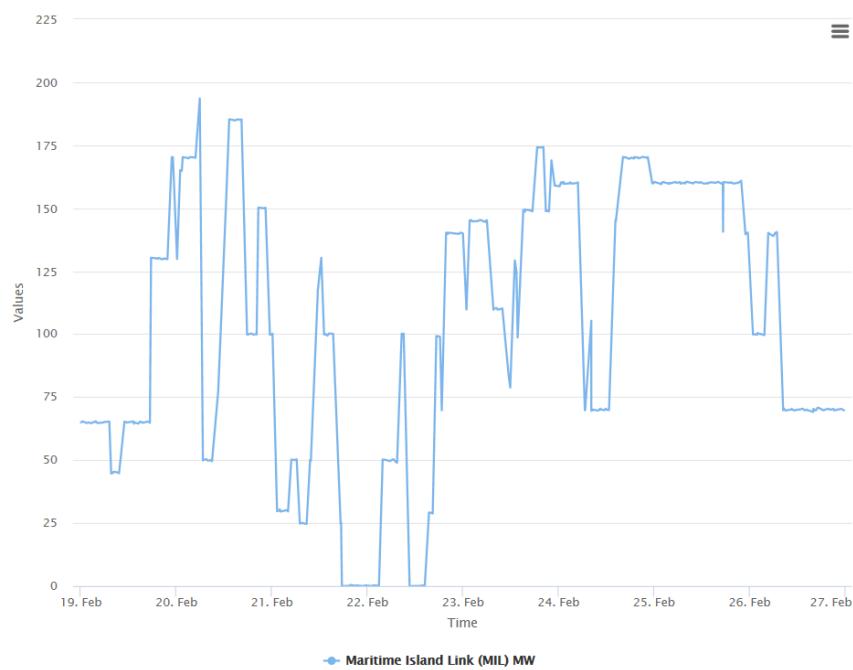

Figure 1: Imports over Maritime Link between February 19 and 26, 2019

- 1 Hydro can also purchase energy and capacity for economic reasons by doing short-term transactions or
2 by making larger, longer term commitments. In March 2019, Nalcor Energy Marketing (“NEM”) entered
3 into a contract on Hydro’s behalf for unit-firm capacity from a third party for 100 MW on-peak and 50
4 MW off-peak. Based on the analysis of the data from March, the contracted amount was supplied in all
5 hours. Similarly, NEM entered into a deal for 24.5 GWh of energy in October, which combined with real-
6 time opportunistic purchases resulted in total imports of 53.3 GWh in October. NEM has also
7 successfully entered into an agreement on Hydro’s behalf for November 2019 for the purchase of 60
8 GWh of energy, with a delivery profile of 100 MW per hour on-peak and 50 MW per hour off-peak.
9
- 10 Based on Hydro’s experience with securing market purchases to date, import scenarios are
11 contemplated as sensitivities to the expected case in this report; that is firm imports of 50 MW and 100
12 MW from December 2019 to March 2020 with an associated forced outage rate intended to serve as
13 proxy for anticipated potential interruptions to the import. Since the availability of these contracts
14 depends on the availability of capacity from a third-party to provide firm capacity, there is no guarantee
15 that these contracts would be available. The analysis demonstrates the effect on the system if the
16 capacity was available in the requested amounts.

7.2 System Energy Capability

In August 2019, Hydro revised its minimum storage limits for the remainder of the year in consideration of continued delays in the availability of the LIL to deliver energy to the Island Interconnected System. System energy analysis was conducted assuming no energy deliveries to the Island Interconnected System via the LIL through winter 2019-2020. The results of this analysis indicated that Hydro needs to produce and/or procure additional energy to help ensure its ability to reliably supply customers through the winter in the event of the critical dry sequence. The change in storage limits was first communicated to the Board in Hydro's Monthly Energy Supply Report for August 2019. An update on energy in storage with respect to minimum storage limits was subsequently communicated in Hydro's Monthly Energy Supply Report for September 2019, and will continue to be shared with the Board in Hydro's Monthly Energy Supply Reports.

Following the revision of its minimum storage limits, Hydro engaged NEM to import energy on its behalf when available and economic. To the end of October 2019, NEM had imported 75.8 GWh. In addition to real-time and day ahead efforts, NEM has secured an import deal of 60 GWh for the month of November. Hydro also entered into a power purchase agreement with Corner Brook Pulp and Paper for the purchase of approximately 13.5 GWh, as approved in Board Order P.U. 35 (2019). Further mitigation efforts include the early return to service and maximization of generation at the Holyrood TGS Units for fall 2019. Units 1, 2 and 3 at Holyrood TGS are required to generate during the fall 2019 and winter 2019-2020 to provide capacity and the balance of energy to meet Hydro's customer and system reliability requirements. At this point, Hydro expects thermal production above minimum to continue to be required through fall 2019 and foreseeably winter 2019-2020 at varying levels to support current reservoir levels.

As of October 31, 2019, Hydro's total system energy in storage was 1,186 GWh; 231 GWh below the revised minimum storage limit of 1,417 GWh for October 2019. Figure 2 plots the 2018 and 2019 storage levels, minimum storage limits, maximum operating level storage, and 20-year average aggregate storage for comparison.

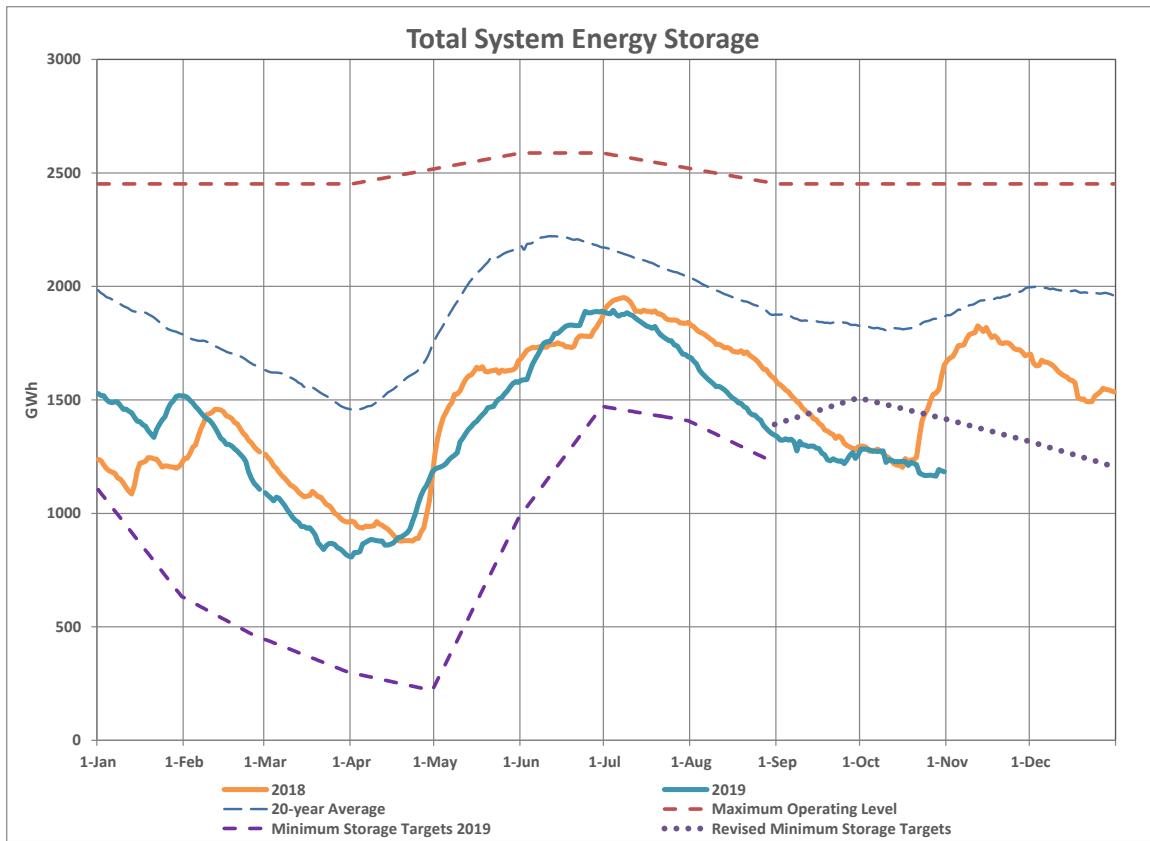

Figure 2: Total System Energy Storage for October 31, 2019

1 Storage in the reservoir systems is being monitored to minimize the risk posed to Hydro's ability to
2 reliably supply customers. Imports on the Maritime Link and thermal generation above minimum are
3 expected to continue throughout the winter 2019-2020 operating season. Imports will be used to
4 supplement generation from Holyrood TGS if energy in storage remains low, otherwise imports will be
5 used to offset thermal generation to the extent that it is economically and technically feasible. At this
6 point, Hydro does not foresee using production from standby generation to support reservoir levels.

7.3 Load Forecast

8 Customer load requirements have been assessed since the completion of the May Report. The Island
9 Interconnected System utility and industrial load requirements, as well as the Labrador Interconnected
10 System utility requirements, remain unchanged for the 2019-2020 winter operating season. The overall
11 Labrador Interconnected System forecast demand requirements have increased by 4% following
12 consultation with Hydro's Labrador Interconnected System Industrial customers. Details of Hydro's
13 current forecasts for the 2019-2020 winter operating season are provided in Tables 7 through 9.

- 1 A complete update to Hydro's five-year load forecast will be provided in Hydro's November filing of the
- 2 RRA.

Table 7: 2019-2020 Island Interconnected System Load Forecast

	MW
Utility Requirements ⁶	1,481
Industrial Customers	178
Island Interconnected System Customer Coincident Demand	1,659
Island Interconnected System Transmission Losses and Station Service Requirements	77
Total Island Interconnected System Requirements (P50)	1,736
P90 Demand Adjustment	60
Total Island Interconnected System Requirements (P90)	1,796

Table 8: 2019-2020 Labrador Interconnected System Load Forecast

	MW
Utility Requirements	149
Industrial Customers	301
Labrador Interconnected System Customer Coincident Demand	450
Labrador Interconnected System Transmission Losses and Station Service Requirements	47
Total Labrador Interconnected System Requirements	497

Table 9: 2019-2020 Newfoundland and Labrador Interconnected System (“NLIS”) Load Forecast

	MW
NLIS Customer Coincident Demand	2,075
NLIS Transmission Losses and Station Service Requirements	122
Total NLIS Requirements	2,197
Island Interconnected System P90 Demand Adjustment	60
Total NLIS Requirements (P90)	2,257

3 **7.4 Scenarios Considered and Results**

- 4 The following subsections provide a description of the seven scenarios considered, and the anticipated
- 5 system reliability in each case (i.e., LOLH, EU, and normalized EU results).

6 **7.4.1 Scenarios**

- 7 Seven scenarios were analyzed to assess system reliability under a range of potential system conditions.

⁶ Reflects combined requirements of Newfoundland Power and Hydro Rural Retail.

- 1 **Scenario 1:** The expected scenario, which includes no availability of the LIL prior to June 1, 2020. This
2 scenario assumes a DAFOR of 15% for Holyrood TGS, and the continuation of the Vale and Corner Brook
3 Pulp and Paper Limited capacity assistance contracts.
- 4 **Scenario 2:** Varies from Scenario 1 by increasing the Holyrood TGS DAFOR to 18%.
- 5 **Scenario 3:** Varies from Scenario 1 by increasing the Holyrood TGS DAFOR to 20%.
- 6 **Scenario 4:** Varies from Scenario 1 by considering imports of 50 MW over the Maritime Link from
7 December 1, 2019 to March 31, 2020.
- 8 **Scenario 5:** Varies from Scenario 1 by considering imports of 100 MW over the Maritime Link from
9 December 1, 2019 to March 31, 2020.
- 10 **Scenario 6:** Varies from Scenario 4 by considering imports of 50 MW over the Maritime Link from
11 December 1, 2019 to March 31, 2020 with a Holyrood TGS DAFOR of 20%.
- 12 **Scenario 7:** Varies from Scenario 5 by considering imports of 100 MW over the Maritime Link from
13 December 1, 2019 to March 31, 2020 with a Holyrood TGS DAFOR of 20%.

14 **7.4.2 Expected Unserved Energy and Loss of Load Hours Analysis**

15 **Annual Assessment Results**

16 Table 10 provides the annual LOLH, EU and normalized EU results. Note that the basis for comparison
17 of results is Hydro's existing LOLH criteria of not more than 2.8 hours per year. Hydro intends to migrate
18 to its proposed criteria of 0.1 LOLE when the Muskrat Falls project has been fully commissioned and
19 thermal generation at Holyrood TGS, Hardwoods, and Stephenville have been retired.

20
21 The results for 2020 are similar to the results reported for 2019 in Hydro's November 2018 RRA filing.
22 This is consistent with expectations, given the similarity between the current assumptions and analysis
23 conducted at that time (i.e. LIL unavailable, modelled Holyrood TGS unavailability of 15%, 18%, and 20%,
24 continued capacity assistance). Slight changes in the LOLH and EU values for 2020 in this report as
25 compared to those reported for 2019 in the 2018 RRA can be attributed to the changes in load forecast,
26 changes in forced outage rates, and updated loss equations.

27
28 The results indicate that the reliability of the system in the expected case, Scenario 1, is within Hydro's
29 current planning criteria. There is increased exposure through the 2019-2020 winter operating season as

1 Holyrood TGS unavailability increases beyond 15%, as shown in the results of Scenarios 2 and 3. As seen
2 in Scenarios 4 through 7, the import of firm energy over the Maritime Link produces a significant
3 improvement in system reliability. Scenarios 4 and 5 demonstrate that firm imports could be used to
4 increase the reliability of the current system. Scenarios 6 and 7 demonstrate that imports can be used to
5 mitigate the increased risk of resource shortfalls to current planned reliability levels if Holyrood TGS or
6 other generating assets were to perform more poorly than expected. Hydro also modelled the import
7 scenarios as 50 MW and 100 MW on peak only, rather than all hours, and confirms that there is no
8 statistically significant variation between the results from a reliability perspective. This is consistent with
9 expectations, as in both cases, the imported quantities are available during the time of the daily peak
10 when additional capacity is required to improve the overall reliability of the system. Given current
11 energy in storage, it is likely that Hydro would prefer to purchase in all hours, rather than on peak only.
12 As such, results are presented for cases with imports in all hours.

Table 10: Annual LOLH, EUA, and Normalized EUA Results

Reliability Metric		Oct – Dec 2019⁷	Jan – May 2020
LOLH (hours)			
S1: Expected Case; LIL outage to June 1, 2020, no imports, Holyrood TGS DAFOR = 15%		0.65	2.33
S2: Expected Case, Holyrood TGS DAFOR = 18%		1.00	3.55
S3: Expected Case, Holyrood TGS DAFOR = 20%		1.24	4.55
S4: Expected Case, Holyrood TGS DAFOR = 15%, Imports of 50 MW		0.36	1.15
S5: Expected Case, Holyrood TGS DAFOR = 15%, Imports of 100 MW		0.22	0.51
S6: Expected Case, Holyrood TGS DAFOR = 20%, Imports of 50 MW on peak		0.70	2.30
S7: Expected Case, Holyrood TGS DAFOR = 20%, Imports of 100 MW on peak		0.46	1.13
EUA (MWh)		Oct – Dec 2019	Jan – May 2020
S1: Expected Case; LIL outage to June 1, 2020, no imports, Holyrood TGS DAFOR = 15%		34	121
S2: Expected Case, Holyrood TGS DAFOR = 18%		55	189
S3: Expected Case, Holyrood TGS DAFOR = 20%		71	244
S4: Expected Case, Holyrood TGS DAFOR = 15%, Imports of 50 MW		18	54
S5: Expected Case, Holyrood TGS DAFOR = 15%, Imports of 100 MW		9	21
S6: Expected Case, Holyrood TGS DAFOR = 20%, Imports of 50 MW on peak		37	112
S7: Expected Case, Holyrood TGS DAFOR = 20%, Imports of 100 MW on peak		22	52
Normalized EUA (ppm)⁸		2019	2020
S1: Expected Case; LIL outage to June 1, 2020, no imports, Holyrood TGS DAFOR = 15%		3.2	11.0
S2: Expected Case, Holyrood TGS DAFOR = 18%		5.1	17.2
S3: Expected Case, Holyrood TGS DAFOR = 20%		6.5	22.2
S4: Expected Case, Holyrood TGS DAFOR = 15%, Imports of 50 MW		1.7	5.0
S5: Expected Case, Holyrood TGS DAFOR = 15%, Imports of 100 MW		0.9	2.0
S6: Expected Case, Holyrood TGS DAFOR = 20%, Imports of 50 MW on peak		3.4	10.2
S7: Expected Case, Holyrood TGS DAFOR = 20%, Imports of 100 MW on peak		2.0	4.7

1 Monthly Assessment Results

- 2 Table 11 provides monthly analyses of LOLH and EUA, by year. Examination of the 2019 results indicates
 3 low exposure to lost load and unserved energy through November, with exposure increasing in
 4 December. Examining results for 2019 and 2020, it can be seen that exposure is highest for the period

⁷ 2019 results from October 1, 2019 to December 31, 2019 only.

⁸ Normalized EUA is calculated on a full calendar year basis.

- 1 from December through February. Exposure is seen to reduce in March, following which there is
- 2 negligible exposure to resource shortfalls for the remainder of the period.

Table 11: Monthly LOLH and EUE for 2019-2020

LOLH (hours)	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May
S1: Expected Case; LIL outage to June 1, 2020, no imports, Holyrood TGS DAFOR = 15%	0.01	0.07	0.57	1.15	0.69	0.48	0.00	0.01
S2: Expected Case, Holyrood TGS DAFOR = 18%	0.01	0.11	0.88	1.74	1.07	0.72	0.01	0.01
S3: Expected Case, Holyrood TGS DAFOR = 20%	0.02	0.14	1.08	2.18	1.40	0.94	0.01	0.02
S4: Expected Case, Holyrood TGS DAFOR = 15%, Imports of 50 MW	0.01	0.06	0.29	0.57	0.33	0.24	0.00	0.01
S5: Expected Case, Holyrood TGS DAFOR = 15%, Imports of 100 MW	0.01	0.06	0.13	0.25	0.14	0.11	0.00	0.01
S6: Expected Case, Holyrood TGS DAFOR = 20%, Imports of 50 MW on peak	0.02	0.13	0.55	1.12	0.68	0.47	0.01	0.02
S7: Expected Case, Holyrood TGS DAFOR = 20%, Imports of 100 MW on peak	0.02	0.15	0.29	0.54	0.33	0.24	0.01	0.01
EUE (MWh)	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May
S1: Expected Case; LIL outage to June 1, 2020, no imports, Holyrood TGS DAFOR = 15%	0	2	32	60	36	25	0	0
S2: Expected Case, Holyrood TGS DAFOR = 18%	1	4	50	94	56	39	0	0
S3: Expected Case, Holyrood TGS DAFOR = 20%	1	6	64	118	74	51	0	1

S7: Expected Case, Holyrood TGS DAFOR = 20%, Imports of 100 MW on peak	1	6	15	25	15	11	0	1

3 8.0 Risk and Risk Mitigation

- 4 Hydro's readiness planning for the 2019-2020 winter season is on target and positions the company to
- 5 be ready in terms of generation and transmission availability by December 1, 2019. Potential risks and
- 6 associated mitigation are described in the following sections, with updates to be provided in subsequent
- 7 reporting.

1 **8.1 Bay d'Espoir Penstocks**

2 In 2018, Hydro conducted condition assessments of Bay d'Espoir Penstocks 1, 2, and 3, which included
3 the completion of three reports prepared by a third party consultant. These reports have been
4 completed, reviewed, and the final report was filed with the Board in July 2019. On September 22, 2019,
5 Hydro experienced a failure of Penstock 1 which resulted in a forced outage to Bay d'Espoir Hydraulic
6 Generating Units 1 and 2.

7
8 In response to previous penstock failures, as part of ongoing effort to monitor the performance of the
9 Penstocks and ensure reliability in the short-term, Hydro implemented an annual internal inspection
10 program for Penstocks 1-3 in Bay d'Espoir. The 2019 annual inspections of Penstocks 2 and 3 were
11 completed in the spring and summer months, prior to the Penstock 1 leak, and did not identify any
12 major defects or areas of concern. The inspection of Penstock 1 had been scheduled for October 2019.
13 This inspection was advanced and completed while Penstock 1 was undergoing repairs following the
14 most recent failure. The results of the 2019 inspection revealed no major defects or areas of concern
15 outside of the ruptured zone. Although the inspection did not reveal any immediate concerns, penstock
16 1 is nearing the end of life and the recent leak is important evidence for consideration on the final
17 decision regarding long term reliability options currently being considered for the Bay d'Espoir
18 penstocks.

19
20 To mitigate potential impacts should another penstock leak occur, Hydro has taken proactive measures
21 to ensure reduced downtime. Hydro has stocked pre-rolled steel plate to complete a repair. Hydro is
22 also investigating the availability of welders with the appropriate certification who could be on site
23 within 48 hours⁹, and identifying the equipment that should be continuously available on site. Hydro
24 plans to have these details confirmed by December 1, 2019 and will provide an update in the December
25 10, 2019 WR Planning report. The long terms plans for these penstocks are subject to other information
26 filings with the Board and are continuing with new information through Q1 2020.

27 **8.2 Cat Arm CD-8**

28 Hydro is executing an un-planned refurbishment scope of work for the upstream slope of the CD-8 dam.
29 The work is being completed under Hydro's Hydraulic In-Services Failures 2019 capital project.

⁹ Upon recognition of a failure, the generating units are removed from service, the penstock is drained, the failure is uncovered from the exterior, and access to the interior is gained. This activity can take two days to complete.

1 The CD-8 dam is located in the main reservoir near the tunnel that conveys water to the forebay
2 reservoir. Erosion damage to the protective riprap¹⁰ layer in sections of the CD-8 dam was observed
3 during annual inspection; the refurbishment is required to restore the dam to original design. Hydro has
4 tendered and awarded the construction contract. The work has progressed well and completion is
5 expected by November 15, 2019.

6 **8.3 Reservoir Levels**

7 Hydro continually monitors energy levels in its reservoirs, the inflows in comparison to historic dry
8 periods, and results from Vista DSS modelling to ensure it is able to reliably supply its customers. The
9 analysis focuses on ensuring there is sufficient energy available for customers using a mix of hydraulic,
10 thermal, and purchased energy. During the 2018-2019 winter operating season, Hydro utilized the
11 Maritime Link and Holyrood TGS off-minimum generation to support water levels in the reservoirs.
12 Generation above minimum at Holyrood TGS is otherwise required throughout the course of a typical
13 winter to meet operating reserve requirements. The ability to use the Maritime Link when economic to
14 offset Holyrood TGS production is beneficial to customers.

15
16 In August 2019 Hydro revised its minimum storage limits for the remainder of the year in consideration
17 of the evolving schedule for the availability of the LIL to deliver energy to the Island Interconnected
18 System. System energy analysis was conducted assuming no energy deliveries to the Island
19 Interconnected System from the LIL throughout the winter of 2019-2020. The results of this analysis
20 indicated that Hydro needs to produce and/or procure additional energy to secure its energy in storage
21 in advance of the winter operating season.

22
23 Given that energy in storage is below the revised minimum storage targets, Hydro has taken several
24 initiatives:

- 25 a. An early return to service and maximization of generation at the Holyrood TGS;¹¹
26 b. Energy imports over the Maritime Link when available and economic, which has the effect of
27 supporting water levels; and

¹⁰ Riprap is placed rock that provides a protective layer on the face of the embankment dam structure.

¹¹ To the extent possible in consideration of system reliability requirements.

- c. Secured a Firm Energy Power Purchase Agreement¹² with Corner Brook Pulp and Paper Limited for November and December 2019.

These activities have helped to secure the system energy and will continue until system energy levels improve and Hydro has determined they are no longer required.

It should be noted that stand-by units have not been used for water management purposes and Hydro does not currently foresee using production from standby generation to support reservoir levels.

8.4 Gas Turbine Spare Engine

Since 2016, Hydro has instituted a practice of having a spare engine or engines available to replace the engines at Hardwoods and Stephenville should an in-service failure occur, particularly during the winter operating season. Hydro has continued this practice in 2019 with a plan to carry one spare for the 2019-2020 winter operating season.

On November 22, 2018, a planned borescope inspection of Hardwoods End B, engine s/n 202204, revealed a broken High Pressure (“HP”) turbine blade which required the engine to be removed from service and returned for refurbishment. The detailed inspection of engine s/n 202204 determined that the complete set of HP turbine blades required replacement. The work was approved by the Board (P.U. 33(2019)) and is currently underway at the overhaul facility. The completion of the work was ahead of schedule; however, during engine performance testing an issue was found with the number 7 bearing housing, requiring the engine to be returned to the shop. The unit has been disassembled and is in the process of being rebuilt. Once the rebuild is complete the unit will undergo additional performance testing and will then be returned to Hydro provided it exhibits acceptable performance. Hydro is tracking the schedule for this work closely, and while it is expected the unit will be returned to Hydro by December 1, there is some risk that the unit return may be further delayed.

8.5 Muskrat Falls to Happy Valley Interconnection Project

The focus of the 2019 work for this project is to complete the interconnection and establish power flow between Muskrat Falls Terminal Station 2 (“MFTS2”) and the Happy Valley Terminal Station, which generally includes completion of the Muskrat Falls Terminal Station expansion, construction of a new 6

¹² The purchase of energy was approved by the Board on November 1, 2019 (P.U.35(2019)).

1 km segment of 138kV wood pole transmission line, and completion of line protection upgrades required
2 in the Happy Valley Terminal Station. This work had a planned in-service date of December 15, 2019.
3 Except for the final tie-ins, the transmission line work has been completed. There were delays in the
4 mobilization of the electrical and civil contractor at the MFTS2 site. However, steps were taken to
5 mitigate some of the delays by pre-casting many of the foundations and adjusting work plans to parallel
6 as many activities as practicable. The mitigation efforts have had a positive impact on schedule. The
7 work continues to be closely monitored to evaluate if the mitigation steps taken will be sufficient to
8 maintain the December 2019 construction completion date.

9

10 In the fall of 2019 large voltage swings were experienced at the Muskrat Falls construction site as a
11 result of the switching of 315 kV system elements, the same system that will supply the customers in
12 Happy Valley once construction of the new line and terminal station is complete. Due to the power
13 quality concerns, Hydro initiated an analysis of steady state and transient voltage conditions during such
14 events. Based on the analysis, Hydro has determined that the Muskrat Falls to Happy Valley
15 interconnection cannot be established until the first generating unit at Muskrat Falls is released for
16 service. The addition of this unit will reinforce the transmission system to mitigate the voltage deviation
17 issues to help ensure compliance with Hydro's Transmission Planning Criteria.

18

19 Muskrat Falls Unit 1 was scheduled to be released for service on December 19, 2019; however, the
20 current schedule has moved this date into January 2020. As a result, the Project interconnection will be
21 completed after the commissioning of Muskrat Falls Unit 1.

22

23 Hydro is taking steps to continue to provide reliable service to Labrador East until the interconnection is
24 put into service. This includes continuation of an inspection of L1301/L1302 every six weeks and
25 establishing an interruptible service contract with Labrador Lynx Limited to help manage system load.
26 The proposed contract with Labrador Lynx Limited is similar to the contract put in place last winter.
27 Hydro's actions are expected to provide reliable service through system peak loads for all remaining
28 customers.

29

30 Hydro will continue to keep the Board informed of changes to the status of the interconnection. An
31 update will be provided in the next "Winter Readiness Planning Report" on December 10, 2019.

8.6 Bay d'Espoir Unit 3 Vibration

In early October, Bay d'Espoir Unit 3 began experiencing higher than normal vibration levels when generating above 90% rated capacity. In an effort to mitigate potential for damage to the Unit, on October 4, 2019, Hydro derated the Unit to 70MW¹³ until the condition can be addressed. In response to this de-rating Hydro has implemented an investigation to determine the root cause of the vibration which has consisted of online operational testing as well as engagement of third parties to gather professional opinion. The analysis to date indicates that a bearing on the unit may be in the early stages of failure and may need to be replaced. Two outages have been planned for November 2019 to further investigate the issue; the first outage will facilitate testing and inspection and a second to replace the bearing, if that is deemed the appropriate course of action. Spare bearing parts are available on-site. Note that the planned WR load test for Unit 3, as reflected in Appendix C, was completed prior to discovery of the vibration issue.

8.7 Bay d'Espoir Unit 1 PM9 Deferral

The project to complete the PM9 inspection of Bay d'Espoir Unit 1 has been deferred to 2020. A PM9 is completed every six years and takes approximately five weeks to execute. Considering the overall health of Unit 1, the constraint of the available 3 week outage schedule, and other ongoing and planned work to be executed in 2019, Hydro has decided to defer the PM9 project for Unit 1 to 2020. Rather than executing the PM9 project in 2019, Hydro is completing a PM6 annual inspection as well as any CM activities required to ensure the reliability of Unit 1 for the coming winter. Hydro considers the deferral of the PM9 project to 2020 as low risk.

9.0 Conclusion

The results of Hydro's review of the year-to-date completion status of its AWP for the Island Interconnect System and Labrador Interconnected System assets indicate that its WR milestone will be achieved by December 1, 2019, with the exception of completion of the PM9 project for Bay d'Espoir Unit 1. Hydro will continue to track all required WR activities, manage identified risks, and keep the Board informed of current risks and any additional risks that may arise that may impact the WR date. Hydro is confident in its ability to reliably serve customers in the 2019-2020 winter season.

¹³ The capacity for Unit 3 is 76.5 MW.

Appendix A

Status of Capital Projects Related to Winter Readiness

**Status of Winter Readiness Scope in 2019 Capital Projects
 on the Island and Labrador Interconnected Systems**

Asset Category	Project Title	Expected Completion of 2019 Winter Readiness Scope (October 31 Update)
Hydraulic Generation	Granite Canal: Overhaul Turbine/Generator	Complete
Hydraulic Generation	Bay d'Espoir: Refurbish Turbine, Unit 7	Complete
Hydraulic Generation	Bay d'Espoir: Overhaul Unit 1	2020 TBD (See Note 1)
Hydraulic Generation	Hinds Lake: Refurbish Generator Rotor	22-Nov-2019
Thermal Generation	Holyrood: Replace Battery Banks and Chargers	Complete
Gas Turbine Generation	Hardwoods: Upgrade Human Machine Interface and Automatic Voltage Regulator	08-Nov-2019
Gas Turbine Generation	Hardwoods Gas Turbine Equipment Refurbishment and Replacement	08-Nov-2019
Gas Turbine Generation	Stephenville: Overhaul Gas Generator	16-Nov-2019
Terminal Stations	Various Locations: Replace Surge Arresters	Complete
Terminal Stations	Various Locations: Replace Instrument Transformers	Complete
Terminal Stations	Holyrood: Replace 66 kV Station Service Feed	Complete
Terminal Stations	Various Locations: Upgrade Power Transformers (2019-2020)	Complete
Terminal Stations	Wabush: Additions for Load	22-Nov-2019
Terminal Stations	Various Locations: Replace Battery Banks and Chargers	22-Nov-2019
Terminal Stations	Various Locations: Upgrade Power Transformers (2018-2019)	18-Nov-2019
Transmission	Various Transmission Lines: Perform Wood Pole Line Management	Complete

Notes

1. The project to complete the PM9 inspection of Bay d'Espoir Unit 1 has been deferred to 2020. A PM9 is completed every six years and takes approximately five weeks to execute. Considering the overall health of Unit 1, the constraint of the available 3 week outage schedule, and other ongoing and planned work to be executed in 2019, Hydro has decided to defer the PM9 project for Unit 1 to 2020. Rather than executing the PM9 project in 2019, Hydro is completing a PM6 annual inspection as well as any corrective maintenance activities required to ensure the reliability of Unit 1 for the coming winter. Hydro considers the deferral of the PM9 project to 2020 as low risk.

Appendix D

Master Generation Outage Schedule

Notes:

1. Holyrood Unit 1 previously available at 150 MW pending the completion of the safety valves testing. The unit returned to full capacity on October 31 after completion of the safety valves testing.
2. Holyrood Unit 3 previously available at 140 MW pending the completion of the safety valves testing. The unit returned to full capacity on October 01 after completion of the safety valves testing.
3. Bay d'Espoir Units 1 and 2 previously unavailable due to a penstock leak. The units returned to service on October 04.
4. Bay d'Espoir Unit 3 is available at 70 MW due to a vibration issue. Expected to return to full capacity on November 27.
5. Stephenville Gas Turbine available at 25 MW due to the removal of End B engine for an overhaul. The Gas Turbine expected to be available at full capacity (50 MW) by November 18 following the installation of the overhauled engine.
6. 24.7 MW include Hawke's Bay (5 MW), St. Anthony (9.7 MW), and Holyrood Diesels (10 MW).
7. St. Anthony Diesel Plant available at 8.85 MW due to automation upgrades on units 2003 and 229 (G7 and G8 respectively, 850 kW each). Expected to return to full capacity on November 22.
8. November's and December's Total Reserves reflect the planned agreements for CBPP Capacity Assistance (net 92 MW) and System Voltage Reduction (up to 20 MW).
9. December's Total Reserves reflect the planned agreements for CBPP Capacity Assistance (net 92 MW), System Voltage Reduction (up to 20 MW), and Vale Diesels (7.6 MW).

* Preventive/Corrective Maintenance items that require short duration outages are not reflected in this chart. They are planned in conjunction with system operation for an appropriate time.

Legend	
Unit Available	White
Unit Unavailable	Dark Blue
Unit Derated	Light Blue
Unplanned / Extension	Gray

Unit Board UB3 (UT3)				CEN3		Shares spare with Feeder to transformer SAT34 - breaker SAT34, 5HK-VR-250-1200A	In Stock
Unit Board UB3 (UT3)				CES3		Shares spare with Feeder to transformer SAT34 - breaker SAT34, 5HK-VR-250-1200A	In Stock
Unit Board UB3 (UT3)				CWE3		Shares spare with Feeder to transformer SAT34 - breaker SAT34, 5HK-VR-250-1200A	In Stock
Unit Board UB3 (UT3)				CWW3		Shares spare with Feeder to transformer SAT34 - breaker SAT34, 5HK-VR-250-1200A	In Stock
Unit Board UB3 (UT3)				UT3 relays		Shares spare with other Westinghouse relays - replaced by ABB SPAU121C	In Stock
Unit Board UB3 (UT3)				Aux Board UAB3 (UAB3)	Relays	Shares spare with other Westinghouse relays - replaced by ABB SPAU121C	In Stock
Station Board SB12 (SSB1)		Unit Aux Transformer (UAT3)		SSB-3 Relay		Replaced by SEL-551C	RELAY,OVERCURRENT SEL551C
Station Board SB12 (SSB1)		Aux Transformer ATC - SSB3		Relays		Replaced by SEL701	RELAY,PROTECTION SEL701
Station Board SB12 (SSB1)		Aux Transformer ATC - SSB3				Direct replacement breaker - 5HK-VR-250-2000A	BREAKER,EATON 4160V 2000A
Station Board SB12 (SSB1)				SSB-1 Relay		Replaced by ABB SYN5201-0271	SYNCHROTACT,SYN5201 In Stock
Station Board SB12 (SSB1)				SSB-1 Relay		Replaced by ABB SPAU121C	RELAY,VOLTAGE ABB SPAU121C
Station Board SB12 (SSB1)				SSB-1 Relay		Replaced by ABB RXMA/RXMH	RELAY,AUXILIARY RXMA/ RXMH 2
Station Board SB12 (SSB1)				SSB-1 Relay		Replaced by ABB RXMA/RXMH	RELAY,AUXILIARY RXMA/ RXMH 1
Station Board SB12 (SSB1)				SSB-1 Relay		Replaced by ABB RXMA/RXMH	RELAY,AUXILIARY RXMS- 1
Station Board SB12 (SSB1)				breaker PSM3 relay	n/a	Replaced by ABB RXMA/RXMH	RELAY,AUXILIARY RXMH 2
Station Board SB34 (ST34)						n/a	RELAY,PROTECTION SEL701
Unit Board UB1 (UB1-2)				UB1-5 relay		n/a	RELAY,PROTECTION SEL701
Unit Board UB1 (UB1-2)				UB1-6 relay		n/a	RELAY,PROTECTION SEL701
Unit Board UB1 (UB1-2)				UB1-7 relay		n/a	RELAY,PROTECTION SEL701
Unit Board UB1 (UB1-2)				UB1-8 relay		n/a	RELAY,PROTECTION SEL701

					Inventory Description
Unit Board UB1 (UB1-2)			UB1-10 relay	n/a	RELAY,PROTECTION SEL701
Unit Board UB2 (UB2-1)			UB2-5 relay	Replaced by SEL701	RELAY,PROTECTION SEL701
Unit Board UB2 (UB2-1)			UB2-6 relay	n/a	RELAY,PROTECTION SEL701
Unit Board UB2 (UB2-1)			UB2-7 relay	n/a	RELAY,PROTECTION SEL701
Unit Board UB2 (UB2-1)			UB2-8 relay	Replaced by SEL701	RELAY,PROTECTION SEL701
Unit Board UB3 (UT3)			BFE3 relay	n/a	RELAY,PROTECTION SEL701
Unit Board UB3 (UT3)			BFW3 relay	n/a	RELAY,PROTECTION SEL701
Unit Board UB3 (UT3)			FDE3 relay	n/a	RELAY,PROTECTION SEL701
Unit Board UB3 (UT3)			FDW3 relay	n/a	RELAY,PROTECTION SEL701
Unit Board UB3 (UT3)			CEN3 relay	n/a	RELAY,PROTECTION SEL701
Unit Board UB3 (UT3)			CES3 relay	n/a	RELAY,PROTECTION SEL701
Unit Board UB3 (UT3)			CWE3 relay	n/a	RELAY,PROTECTION SEL701
Unit Board UB3 (UT3)			CWW3 relay	n/a	RELAY,PROTECTION SEL701
Unit Board UB3 (UT3)	Unit Aux Transformer (UAT3)	Aux Board UAB3 (UAB3)	Relays	n/a	RELAY,PROTECTION SEL701
Station Board SB12 (SSB1)	Aux Transformer ATC - SSB3	Power Center C SAB12 (C1) (Alternate Feed Tie Breaker to Transfer Bus C15)	Feeder to Power Centre - breaker C1	Purchasing re-build kit/critical spares kit for AK-1-50 frame breaker	BREAKER,EATON 600V In Stock
Station Board SB12 (SSB1)	Aux Transformer ATC - SSB3	Power Center C SAB12 (C1)	Feeder to MCC C1 - breaker C2	Purchasing re-build kit/critical spares kit for AK-2-25 frame breaker	BREAKER,EATON 600V In Stock
Station Board SB34 (ST34)	Station Aux Transformer (SAT34)	Station Aux Board (SAB34)	Feeder to transformer SAT34 - breaker SAT34 & relays	Direct replacement breaker 5HK-VR-250-1200A	BREAKER,EATON 4160V 1200A In Stock
Station Board SB34 (ST34)	Station Aux Transformer (SAT34)	Station Aux Board (SAB34)	Feeder to Station Board - breaker SAB34	Purchasing re-build kit/critical spares kit for 65H frame breaker	BREAKER,SCHNEIDER 600V In Stock
Station Board SB34 (ST34)	Station Aux Transformer (SAT34)	Station Aux Board (SAB34)	Feeder to Station Board - breaker ATB12	Purchasing re-build kit/critical spares kit for 50H-2 frame breaker	BREAKER,SCHNEIDER 600V In Stock
Station Board SB34 (ST34)	Station Aux Transformer (SAT34)	Station Aux Board (SAB34)	WAM34	Purchasing re-build kit/critical spares kit for 50H-3 frame breaker	BREAKER,SCHNEIDER 600V In Stock
Unit Board UB1 (UB1-2)	UB13 (Aux Transformer ATA)	Power Center A UAB1 (A1) (Alternate Feed Transfer Bus A9)	Relays	Shares spare with all other P&B Golds devices.	RELAY,RETRO. PBS13E5N11 In Stock
Unit Board UB1 (UB1-2)	UB13 (Aux Transformer ATA)	Power Center A UAB1 (A1) (Alternate Feed Transfer Bus A9)	Relays	Shares spare with CGE IAC51 and ICA53 devices - replaced by SEL-551C	RELAY,OVERTCURRENT SEL 551C In Stock

Appendix F: Critical Spares Status Listing - Gas Turbine Generation
Page 1 of 15

Recommended Component	Stock Status as of October 31, 2019	Risk Score	Expected Delivery	Comments
High Energy Ignition Unit, Gas Generator, Prime Mover Systems	In Stock	High	N/A	
Bearing (494047), Power Turbine Model CT2, Prime Mover Systems	In Stock	Medium	N/A	
Bearing (494056), Power Turbine Model CT2, Prime Mover Systems	In Stock	Medium	N/A	
Vibration Transducer, Gas Generator, Prime Mover Systems	In Stock	Medium	N/A	
Jacking Oil Pump, Main Lube Oil System, Auxiliary Systems	In Stock	High	N/A	
Fuel Filter, Gas Generator, Prime Mover Systems	In Stock	Medium	N/A	
Oil Filter Unit - Complete (B.108506), Gas Generator, Prime Mover Systems	In Stock	Medium	N/A	
Filter (494064), Power Turbine Model CT2, Prime Mover Systems	In Stock	Medium	N/A	
Proximity Switch, Clutch, Prime Mover Systems	In Stock	Medium	N/A	
Altair Quick Shutoff Valve (AV-LF-1), Liquid Fuel System, Auxiliary Systems	In Stock	High	N/A	
Fuel Valve (FC-LF-1), Liquid Fuel System, Auxiliary Systems	In Stock	High	N/A	
Fuel Recirculation Solenoid Valve (LF-7), Liquid Fuel System, Auxiliary Systems	In Stock	Medium	N/A	
Fuel Regulator (LF-4), Liquid Fuel System, Auxiliary Systems	In Stock	Medium	N/A	
Jacking Oil Permissive Pressure Switch, Main Lube Oil System, Auxiliary Systems	In Stock	High	N/A	
Valve (181536), Power Turbine Model CT2, Prime Mover Systems	In Stock	Low	N/A	
Primary Ratchet Ring, Clutch, Prime Mover Systems; A side	In Stock	High	N/A	
Primary Ratchet Ring, Clutch, Prime Mover Systems; B side	In Stock	High	N/A	
Secondary Ratchet Ring, Clutch, Prime Mover Systems; A side	In Stock	High	N/A	
Secondary Ratchet Ring, Clutch, Prime Mover Systems; B side	In Stock	High	N/A	
Ring that the Primary Pawl and spring are installed	In Stock	Medium	N/A	
Primary Pawl Spring, Clutch, Prime Mover Systems	In Stock	High	N/A	
Secondary Pawl, Clutch, Prime Mover Systems	In Stock	Medium	N/A	
Limit Switch, Snow Door Assembly, Exhaust, Prime Mover Systems, SVL GT	In Stock	Medium	N/A	
Thermocouple (181398N1), Power Turbine Model CT2, Prime Mover Systems	In Stock	Medium	N/A	
Speed Pickup (181487), Power Turbine Model CT2, Prime Mover Systems	In Stock	High	N/A	
Thermocouple (181397), Power Turbine Model CT2, Prime Mover Systems	In Stock	Medium	N/A	
Thermocouple (181398N2), Power Turbine Model CT2, Prime Mover Systems	In Stock	Medium	N/A	
Probe (181414N1), Power Turbine Model CT2, Prime Mover Systems	In Stock	Medium	N/A	

Critical Spares Stock Status as of October 31, 2019
Hardwoods and Stephenville - Gas Turbines

Hardwoods and Stephenville - Gas Turbines				
Probe (181414N2), Power Turbine Model CT2, Prime Mover Systems	In Stock	Medium	N/A	N/A
Thermocouple (184847), Power Turbine Model CT2, Prime Mover Systems	In Stock	High	N/A	N/A
Motor Operated Tank Shutoff Valve (LF-38), Liquid Fuel System, Auxiliary Systems, HWD GT	In Stock	High	N/A	N/A
Final Fuel Filter (F-LF-1), Liquid Fuel System, Auxiliary Systems	In Stock	Medium	N/A	N/A
Heater Filter Coalescer, Liquid Fuel System, Auxiliary Systems	In Stock	Medium	N/A	N/A
Prefilter, Liquid Fuel System, Auxiliary Systems	In Stock	Medium	N/A	N/A
High Efficiency Farr HP-100 Filter (2'x2'x2'), Filter Box - Curtiss Wright, Prime Mover Systems	In Stock	Medium	N/A	N/A
Filter (F-GGLO-1), Gas Generator Lube Oil System, Auxiliary Systems	In Stock	High	N/A	N/A
Unloading Filter, Liquid Fuel System, Auxiliary Systems, SVL GT	In Stock	Medium	N/A	N/A
Duplex 25u Filter (F-LO-1), Main Lube Oil System, Auxiliary Systems	In Stock	Medium	N/A	N/A
Filter/Coalescer Heater (HTR-LF-1), Liquid Fuel System, Auxiliary Systems, HWD GT	In Stock		N/A	N/A
P3 Pressure Transducer (PT-P3-1), Liquid Fuel System, Auxiliary Systems	In Stock	High	N/A	N/A
Fuel Supply Thermocouple (TC-LF-1), Liquid Fuel System, Auxiliary Systems, SVL GT	In Stock	Medium	N/A	N/A
Alternator Cooling Air Temperature Thermocouple (TC-A-1), Alternator Cooling System, Auxiliary Systems, SVL GT	In Stock	Medium	N/A	N/A
Common Drain Clutch B Thermocouple (TC-LO-11), Main Lube Oil System, Auxiliary Systems, SVL GT	In Stock	Medium	N/A	N/A
Compressor Start-Stop Pressure Switch (PS-CA-1), Gas Generator Air Starter System, Auxiliary Systems	In Stock	High	N/A	N/A
Compressor Start-Stop Pressure Switch (PS-CA-2), Gas Generator Air Starter System, Auxiliary Systems	In Stock	High	N/A	N/A
Anti-Icing Hot Air Valve - Complete (810-501-0747), Gas Generator, Prime Mover Systems	In Stock	Low	N/A	N/A
Gas Generator Permissive Start Pressure Switch, Gas Generator Air Starter System, Auxiliary Systems	In Stock	High	N/A	N/A
Starter Overpressure Pressure Switch (PS-CA-3), Gas Generator Air Starter System, Auxiliary Systems	In Stock	High	N/A	N/A
Pressure Regulating Valve (LO-8), Main Lube Oil System, Auxiliary Systems	In Stock	Medium	N/A	N/A
Inlet Temperature Thermocouple, Gas Generator Enclosure with Septum Doors, Prime Mover Systems	In Stock	Medium	N/A	N/A
Resistance Temperature Detector Probe, Gas Generator Enclosure with Septum Doors, Prime Mover Systems	In Stock	Medium	N/A	N/A

Critical Spares Stock Status as of October 31, 2019
Hardwoods and Stephenville - Gas Turbines

NC Solenoid Valve (SV-CA-3), Gas Generator Air Starter System, Auxiliary Systems	In stock	High	N/A
Combustion Chamber, Gas Generator, Prime Mover Systems	In Stock	Medium	N/A
Lower Fuel Pump Assembly, Gas Generator, Prime Mover Systems	In Stock	Medium	N/A
Outer Fuel Pump Drive Assembly (BDA.7591), Gas Generator, Prime Mover Systems	In Stock	Medium	N/A
Upper Fuel Pump Assembly, Gas Generator, Prime Mover Systems	In Stock	Medium	N/A
Exciter Bearing, 63MVA 50MW Generator, Power Generation Systems	In Stock	High	N/A
Rotor Bearing, 63MVA 50MW Generator, Power Generation Systems	In Stock	High	N/A
Pressure Switch, Main Lube Oil System, Auxiliary Systems, SVL GT	In Stock	Medium	N/A
Oil to Clutch A Pressure Transducer (PT-LO-1), Main Lube Oil System, Auxiliary Systems, SVL GT	In Stock	High	N/A
Fuel Pressure Transducer (PT-LF-1), Liquid Fuel System, Auxiliary Systems	In Stock	Medium	N/A
Oil Pump - Complete, Gas Generator, Prime Mover Systems	In Stock	Medium	N/A
Outer Oil Pump Drive Assembly (47-1-1-006409), Gas Generator, Prime Mover Systems	In Stock	Medium	N/A
Outer Starter Drive Assembly (BDA.1153), Gas Generator, Prime Mover Systems	In Stock	Medium	N/A
Scavenge Pump Assembly (47-1-1-006418), Gas Generator, Prime Mover Systems	In Stock	Medium	N/A
HP Compressor Magnetic Pickup, Gas Generator, Prime Mover Systems	In Stock	Low	N/A
LP Compressor Magnetic Pickup, Gas Generator, Prime Mover Systems	In Stock	Low	N/A
Low Liquid Level Alarm Switch (LL-GL-1), MLO/Glycol Cooling System, Auxiliary Systems	In Stock	Medium	N/A
Heater Control Temperature Switch (TS-GGLO-1), Gas Generator Lube Oil System, Auxiliary Systems	In Stock	Medium	N/A
Heater Control Temperature Switch (TS-LO-1), Main Lube Oil System, Auxiliary Systems	In Stock	Medium	N/A
Final Fuel Filter Differential Pressure Switch (PSD-LF-1), Liquid Fuel System, Auxiliary Systems	In Stock	Medium	N/A
Inlet Pressure Transducer, Gas Generator Enclosure with Septum Doors, Prime Mover Systems	In Stock	Medium	N/A
Clutch Control Solenoid Valve (LO-6), Main Lube Oil System, Auxiliary Systems, SVL GT	In stock	Medium	N/A
Proximity Switch, Snow Door Assembly, Exhaust, Prime Mover Systems, HWD GT	In Stock	Low	N/A

Critical Spares Stock Status as of October 31, 2019
Hardwoods and Stephenville - Gas Turbines

Recommended Component	Stock Status as of October 2019	Expected Delivery	Comments
Liquid Fuel Burner - Complete (BDC.3026), Gas Generator, Prime Mover Systems	On Order	Early Dec 2019	

Critical Spares Stock Status as of October 31, 2019
Hardwoods and Stephenville - Gas Turbines

2019-2020 Winter Readiness Planning Report
Appendix F: Critical Spares Status Listing - Gas Turbine Generation
Page 5 of 15

Recommended Component	Stock Status as of October 2019	Expected Delivery	Comments
Fire Fuel Shutoff Valve (LF-8), Liquid Fuel System, Auxiliary Systems	In Procurement Process	TBD	
NC Solenoid Valve (SV-CA-2), Gas Generator Air Starter System, Auxiliary Systems	In Procurement Process	TBD	
NO Solenoid Valve (SV-CA-1), Gas Generator Air Starter System, Auxiliary Systems	In Procurement Process	TBD	
Starter Control Valve (CA-17), Gas Generator Air Starter System, Auxiliary Systems	In Procurement Process	Mid-Jan 2020	
Fuel Pump Servo Valve (SV-LF-1), Liquid Fuel System, Auxiliary Systems	In Procurement Process	TBD	
Pressure Switch, Main Lube Oil System, Auxiliary Systems	In Procurement Process	TBD	
Pressure Switch, Liquid Fuel System, Auxiliary Systems, HWDGT	In Procurement Process	TBD	
Pressure Switch, Gas Generator Lube Oil System, Auxiliary System, HWDGT	In Procurement Process	TBD	
Level Switch (LS-GGLO-1), Gas Generator Lube Oil System, Auxiliary Systems	In Procurement Process	TBD

Hardwoods and Stephenville - Gas Turbines

2019-2020 Winter Readiness Planning Report
Appendix F: Critical Spares Status Listing - Gas Turbine Generation
Page 6 of 15

Recommended Component	Stock Status As of October 2019	Expected Delivery	Comments
3-Way Thermostatic Valve (GL-2), MLO/Glycol Cooling System, Auxiliary Systems	Engineering Required	TBD	Existing spare being installed during next maintenance outage
Alternator Bearing Drain Oil Thermocouple (TC-LO-3), Main Lube Oil System, Auxiliary Systems, HWD GT	Engineering Required	TBD	
Oil Drain Alternator Bearing Thermocouple, Main Lube Oil System, Auxiliary Systems, SVL GT	Engineering Required	TBD	
Oil Drain Clutch Bearing Thermocouple, Main Lube Oil System, Auxiliary Systems, SVL GT	Engineering Required	TBD	
Oil Drain Thermocouple (TC-LO-2), Main Lube Oil System, Auxiliary Systems, HWD GT	Engineering Required	TBD	
Oil Supply Thermocouple (TC-LO-1), Main Lube Oil System, Auxiliary Systems	Engineering Required	TBD	
Fuel Temperature Sensor (TS-LF-1), Liquid Fuel System, Auxiliary Systems	Engineering Required	TBD	New switch installed in 2019

Critical Spares Stock Status as of October 31, 2019
Hardwoods and Stephenville - Gas Turbines

Recommended Component	Stock Status as of October 2019	Expected Delivery	Comments
Double-Acting Pneumatic Cylinder, Snow Door Assembly, Exhaust, Prime Mover Systems, SVL GT	Not in stock	N/A	Not required - Does not limit operation
Pneumatic Cylinder, Snow Door Assembly, Exhaust, Prime Mover Systems, HWD GT	Not in stock	N/A	Not required - Does not limit operation
Battery, 125 VDC Battery Bank, D.C. Electrical System, Power Generation Systems, HWD GT	Not in stock	N/A	Not required - limited shelf life of spare
Battery, 250 VDC Battery Bank, D.C. Electrical System, Power Generation Systems, SVL GT	Not in stock	N/A	Not required - limited shelf life of spare
Oil to Glycol Heat Exchanger (CLR-LO-1), MLO/Glycol Cooling System, Auxiliary Systems	Not in stock	N/A	Recently inspected - in good condition
Actuator - Hydraulic & DC Motor (A-LF-1), Liquid Fuel System, Auxiliary Systems	Not in stock	N/A	New system installed
Forwarding DC Emergency Pump No 2, Liquid Fuel System, Auxiliary Systems, SVL GT	Not in stock	N/A	Not required due to redundancy
Expansion Tank Low Level Alarm (LL-GA-1), Alternator Cooling System, Auxiliary Systems, SVL GT	Not in stock	N/A	New system installed
Hydraulic Actuator Supply Filter (F-HO-1), Liquid Fuel System, Auxiliary Systems	Not in stock	N/A	New system installed
Supplemental Fuel AC Pump (P&MLF-5), Liquid Fuel System, Auxiliary Systems	In stock	N/A	Not required - fuel system redesigned
Supplemental Fuel Filter (F-LF-5), Liquid Fuel System, Auxiliary Systems	Not in stock	N/A	System Removed
Bearing (181413 or 181332), Power Turbine Model CT2, Prime Mover Systems	Not in stock	N/A	OEM Supplied within two weeks
Inertial Filter Element, Filter Box - Curtiss Wright, Prime Mover Systems	Not in stock	N/A	Not a wear component

INSTRUMENT AIR COMPRESSOR LOW - OIL LEVEL INDICATOR, INGERSOLL RAND:22102388
 GENERATOR MAIN JACKING OIL PUMP - PRESSURE SWITCH, BARKSDALE:BT-H04
 GENERATOR TURBINE END BEARING - JACKING OIL FLOW SWITCH, MEISTER:DKM/A-1/10
 HYD FLUID AIR BLEED VALVE, HYDAC:AEV6/5_00230023
 HYD FLUID PUMP #1 DISCHARGE - PRESSURE SWITCH, REKROTH:HED 3 OAEX/63/12
 HYD FLUID RESERVOIR - LEVEL TRANSMITTER, GEMS:XT-800
 HYD FLUID RESERVOIR LEVEL INDICATOR, REKROTH:CS3615/244910
 HYD FLUID HEADER SUPPLY - PRESSURE TRANSMITTER, ROSEMOUNT: 3051TG4A2A21AM15Q4
 HYD FLUID COOLER FAN MOTOR - TEMPERATURE SWITCH (OFF), UNITED ELECTRIC CONTROLS: C402-120-1070-M202 135/120F
 HYD FLUID COOLER FAN MOTOR - TEMPERATURE SWITCH (ON), UNITED ELECTRIC CONTROLS: C402-120-1070-M202 135/120F
 HYD FLUID RESERVOIR HEATER - TEMPERATURE SWITCH, UNITED ELECTRIC CONTROLS: C402-120-1070-1070
 HYD FLUID SUPPLY FILTER - DIFFERENTIAL PRESSURE SWITCH, PALL:RC0113CZ097H
 HYD FLUID RESERVOIR THERMOUCOUPLE, OMEGA:N81-CASS-14U-12" DUAL
 CHLORINE INJECTION FLOW SWITCH, DWYER INSTRUMENTS:FS2
 DOUBLE ACTING PNEUMATIC ACTUATOR, KEYSTONE MORIN, TYCO:MRP 004
 0-500 PRESSURE TRANSMITTER - RO SKID, AUTOMATION DIRECT: PTD25-20-0500H
 PRESSURE TRANSMITTER, AUTOMATION DIRECT:PTD25-20-0100H, 0-100 PSI - VARIOUS SKIDS
 ANALOG INPUT CARD FOR PLC, VARIOUS SKIDS, AUTOMATION DIRECT:F0-04AS1
 1.5", STAINLESS STEEL, MCMASTER CARR: 45995K84
 PRESSURE SWITCH, BARKSDALE:EX-4100-25
 PRESSURE SWITCH, DRUCKSCHAFFTER: D1 TM80 SS
 LEVEL SWITCH MODULES, SURESITE: 57480
 ELECTRICAL PACKAGE LOUVER ACTUATOR, MIL4115B1008
 MECHANICAL PACKAGE - VENTILATION THERMOSTAT, T631C1012
 E-CELL STACK FITTINGS KIT, GENERAL ELECTRIC:3019638
 SINGLE POLE RELAYS - VARIOUS SKIDS, AUTOMATION DIRECT:781-1C-120A
 (GV) ACT HYD FLUID FILTER - DIFF. PRESS HIGH SWITCH, MOOG:G4444-2
 MULTIFUNCTION MONITOR - ORP OR PH, AUTOMATION DIRECT:RYAN HERCO:5924-562
 24VDC POWER SUPPLY, AUTOMATION DIRECT:PSB24-060D
 ORP SENSOR, RYAN HERCO:5909-751, RAW WATER PUMP - VARIOUS SKIDS
 CONDUCTIVITY SENSOR - RO, RYAN HERCO:5926-200
 ROSEMOUNT 0305RC22B11
 ATOMIZING AIR HEADER PRESSURE GAUGE, PRESSURE TRANSMITTER,
 BLUE MOISTURE INDICATOR, INGERSOLL RAND 705001-SP
 SIEMENS:WQ 0333 2XPT100, INSTALLATION LENGTH 250MM, HAN 8D
 Siemens:MQ 0206-PVDF8 3XCK(1), INSTALLATION LENGTH 375MM, HAN 8D
 FUEL OIL UNLOADING FLOW/LIQUID TURBINE FLOWMETER, HOFFER FLOW CONTROLS: HO SERIES/6X6-75-1250-CB-1M/XE2-F1CS-EXP
 HYDRAULIC FLUID PUMP #1 - DISCHARGE PRESSURE INDICATOR, REXROTH:2-1/2-1500PUA31-10A-4 JIC
 HYDRAULIC FLUID CONDITIONING LOOP - FILTER DIFFERENTIAL PRESSURE SWITCH, PALL:RC0113CZ090H
 RAW WATER FLOW MAGNETIC FLOWMETER, ROSEMOUNT:8705TSA060C1W0N0G1
 RAW WATER STORAGE TANK LEVEL RADAR LEVEL TRANSMITTER,
 RAW WATER PUMP 1 & 2, DISCHARGE GAUGE, PRESSURE TRANSMITTER, ROSEMOUNT:
 STAGE 2 TEMPERATURE CONTROL VALVE - AIR SIGNAL PRESSURE REGULATOR, FISHER:67CF-1663-38656
 LP COMPRESSOR BLEED VALVE SOLENOID, ASCO:JKC8316GG34V
 STARTING PACKAGE TORQUE CONVERTER PRESSURE GAUGE, KOENIG:BAC-160-25
 CAPSUHELIIC GAUGE 0-6" W.C. PNEUMAFL:551646-B1
 INTAKE AIR STATIC FINAL FILTER - DIFFERENTIAL PRESSURE INDICATOR, DWYER INSTRUMENTS:4006
 CAPSUHELIIC GAUGE 0-2" W.C. PNEUMAFL:551646-B6
 PRESSURE TRANSMITTER 0-300 PSI 4-20MA, ROSEMOUNT:3051TA3A2B21AES
 PRESSURE REGULATOR - AIR SUPPLY FROM INST AIR COMPRESSOR, FISHER:FS64-29
 INSTR. AIR COMPRESSOR PRESSURE GAUGE, AIR CENTERS OF FLORIDA:52P/6
 PRESSURE GAUGE - FOR INST AIR COMPRESSOR, ASHCROFT:45-13772/200b, RANGE:0-200 PSI
 PRESSURE GAUGE 0-160PSI, LIQUID FILLED BACK MOUNT, STAINLESS STEEL, AUTOMATION DIRECT:G25-
 PRESSURE GAUGE 0-100PSI, LIQUID FILLED LOWER MOUNTED, STAINLESS STEEL, AUTOMATION
 PRESSURE GAUGE 0-100PSI, LIQUID FILLED BACK MOUNTED, STAINLESS STEEL, AUTOMATION
 PRESSURE GAUGE 0-500PSI, LIQUID FILLED BACK MOUNTED, STAINLESS STEEL, DWYER
 PRESSURE GAUGE 0-500 PSI, LIQUID FILLED LOWER MOUNTED, STAINLESS STEEL, DWYER
 INSTRUMENTS:SGY-D11122N-GF
 FLOW DIVIDER, JAHNS HYDRAULIK:MTO-2-5-G
 -40F AND -100F, INGERSOLL RAND P/N 23182603
 TRUCK UPLOADING GROUND VERIFICATION MONITOR, 8030-120 GROUND VERIFICATION MONITOR,
 JOHNSON CONTROLS, JCI M9132-GGA-1
 1 SET = 2 PIECES, ABB: GF0X052143P0098
 GENERATOR JACKING OIL - SOLENOID VALVE, SUN HYDRAULICS:DLLDA-MCN
 KOENIG: DG6711A
