Attention: Ms. Cheryl Blundon
Director of Corporate Services & Board Secretary

Dear Ms. Blundon:

Re: *Reliability and Resource Adequacy Study Review – 2021–2022 Winter Readiness Planning Report*

Further to correspondence received from the Board of Commissioners of Public Utilities ("Board") on October 13, 2016 and March 5, 2020 requesting additional detail, please find enclosed Newfoundland and Labrador Hydro's 2021–2022 Winter Readiness Planning Report.

Should you have any questions, please contact the undersigned.

Yours truly,

NEWFOUNDLAND AND LABRADOR HYDRO

1.0 Background and Introduction

The Board of Commissioners of Public Utilities (“Board”), in correspondence dated October 13, 2016,¹ directed Newfoundland and Labrador Hydro (“Hydro”) to provide an annual report detailing its winter readiness (“WR”) planning. This report, for the 2021–2022 winter season, addresses the following items as requested by the Board:

- The status of annual work plan^[2] items, in the format previously provided to the Board, for Hydro’s generating plant and transmission and terminal stations, including the completion to date, outstanding items to complete and any risks to completion or as a result of failure to complete.
- A description and schedule for all outstanding [2021] capital projects for Hydro’s generating plant and transmission and terminal stations, including progress on completion status to date and expected completion date.
- Identification of all equipment and plant testing to be carried out in advance of the winter period (generation plant, emergency diesels, black start generators, fire systems, transmission system equipment), including progress on completion status to date.
- The planned generation outage schedule^[3] for the period September 1 to December 31, [2021], including an explanation for any planned outages extending beyond December 1, [2021].
- An update of critical spares assessment and procurement.
- The forecast loads and expected generation capacity and reserves (setting out the basis for calculation) for the upcoming winter, as of December 1, [2021], and including capacity assistance agreements in place or planned.
- Identification of any risks that could impact the winter readiness of assets as of December 1, [2021] and associated contingency plans.⁴

Except where otherwise noted, information presented in this report covers both the Island Interconnected System and the Labrador Interconnected System for the period ending September 30, 2021.⁵

¹ “Investigation and Hearing into Supply Issues and Power Outages on the Island Interconnected System – Directions further to the Board’s Phase One Report,” Board of Commissioners of Public Utilities, October 13, 2016, at p. 2, item iii).

² Annual Work Plan (“AWP”).

³ Will be provided with the November 10, 2021 Winter Readiness Planning Report. See Section 5.0 for more information.

⁴ “Request to Hydro to file Winter Readiness Planning 2016-2017,” Board of Commissioners of Public Utilities, September 13, 2016.

⁵ The data used to generate the status charts in Section 2.0 reflect a data cutoff date of September 17, 2021.

2.0 Annual Work Plan and Winter Readiness Status

Hydro's AWP integrates all planned activities for the year (i.e., corrective maintenance ("CM"), preventive maintenance ("PM"), and capital project support) that are critical to safe and reliable production and transmission of electricity. Hydro regularly measures the progress of its AWP execution, in comparison with the plan, and is able to track the AWP status down to the level of individual work plan items. The individual AWPs for various assets are incorporated into an integrated AWP. While some AWP activities are planned for completion through December 2021, those tagged as WR activities are planned for completion by December 1, 2021.

This report provides a consolidated summary of operation and maintenance progress, both for the entire AWP (i.e., first chart in each set) and the WR tasks (i.e., second chart in each set), as of September 17, 2021, for each of the following areas of operations:

- Holyrood Thermal Generating Station ("Holyrood TGS"):
 - Units 1, 2, and 3; and
 - Balance of Plant, including black start diesels;
- Gas Turbines:
 - Holyrood;
 - Hardwoods;
 - Stephenville; and
 - Happy Valley;
- Hydraulic Generation:
 - Bay d'Espoir Hydroelectric Generating Facility ("Bay d'Espoir");
 - Cat Arm Hydroelectric Generating Station ("Cat Arm");
 - Hinds Lake Hydroelectric Generating Station ("Hinds Lake");
 - Paradise River Hydroelectric Generating Station ("Paradise River");
 - Upper Salmon Hydroelectric Generating Station ("Upper Salmon"); and
 - Granite Canal Hydroelectric Generating Station ("Granite Canal");

- 1 ● Transmission and Rural Operations for the Island Interconnected System and Labrador
2 Interconnected System:
3 ○ Transmission; and
4 ○ Terminal stations; and
5 ● Network Services.
- 6 Each chart in Section 2.0 includes the completed and remaining operations and maintenance AWP and
7 WR tasks, as well as an indication of the planned task completion target to date. A text box adjacent to
8 each chart set indicates Hydro's forecasted completion status as of September 17, 2021 in relation to
9 AWP and WR activities (i.e., Green: On Target, Yellow: Caution – Recovery Required, Red: Target Will
10 Not be Fully Met). Relevant highlights are also provided.

11 Refer to Section 3.0 and Appendix A for the status of capital projects that include additional WR tasks.
12 Hydro's WR plan reflects the status of Hydro's assets and does not include the Muskrat Falls Project
13 assets. Hydro's WR preparations have focused on completing the necessary operations and
14 maintenance work to ensure system readiness and availability without any additional capacity from the
15 Muskrat Falls Project assets. Hydro anticipates that, at a minimum, the Labrador-Island Link is expected
16 to be largely available for capacity up to 312 MW during the winter season. Hydro is closely monitoring
17 the status of the Muskrat Falls Project commissioning and the associated schedule.

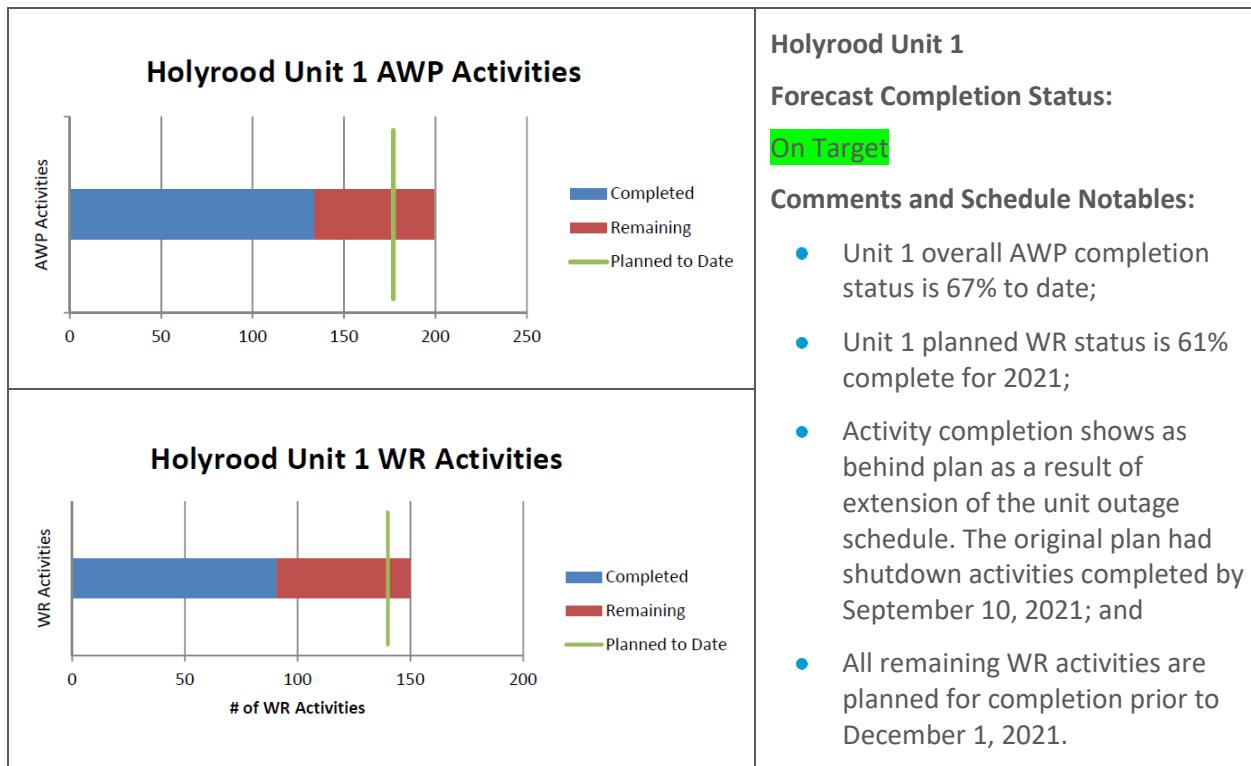

18 **2.1 COVID-19**

19 The 2021 AWP was established with consideration to the ongoing COVID-19 pandemic and lessons
20 learned from 2020. Business Continuity Plans remain in place to ensure that work activities continue
21 safely. Hydro is closely monitoring the COVID-19 pandemic situation, particularly the recent increase in
22 cases in central Newfoundland. Hydro's Upper Salmon and Bay d'Espoir sites have been impacted by the
23 emergence of cases in the central region and some WR work has been adjusted as a result. Hydro
24 continues to monitor the situation and its impact on resource availability and execution for other
25 hydraulic generation work.

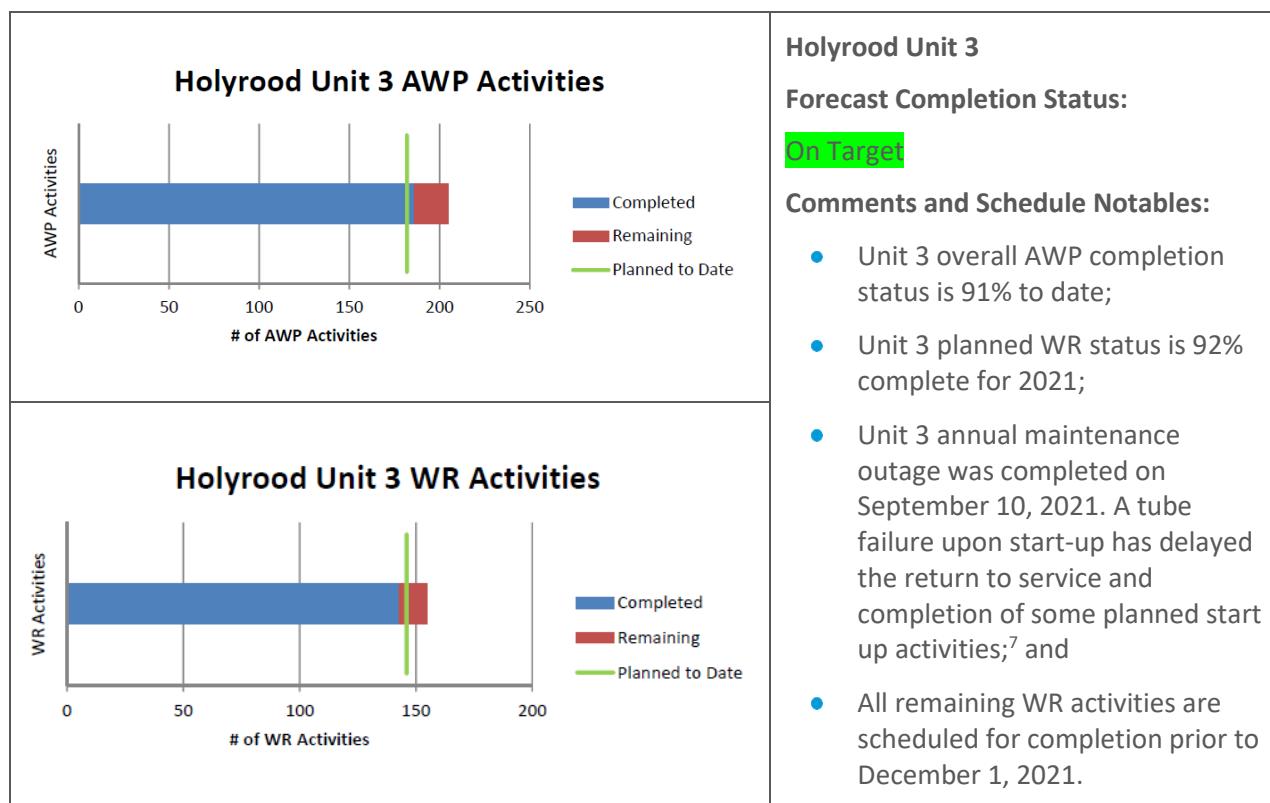

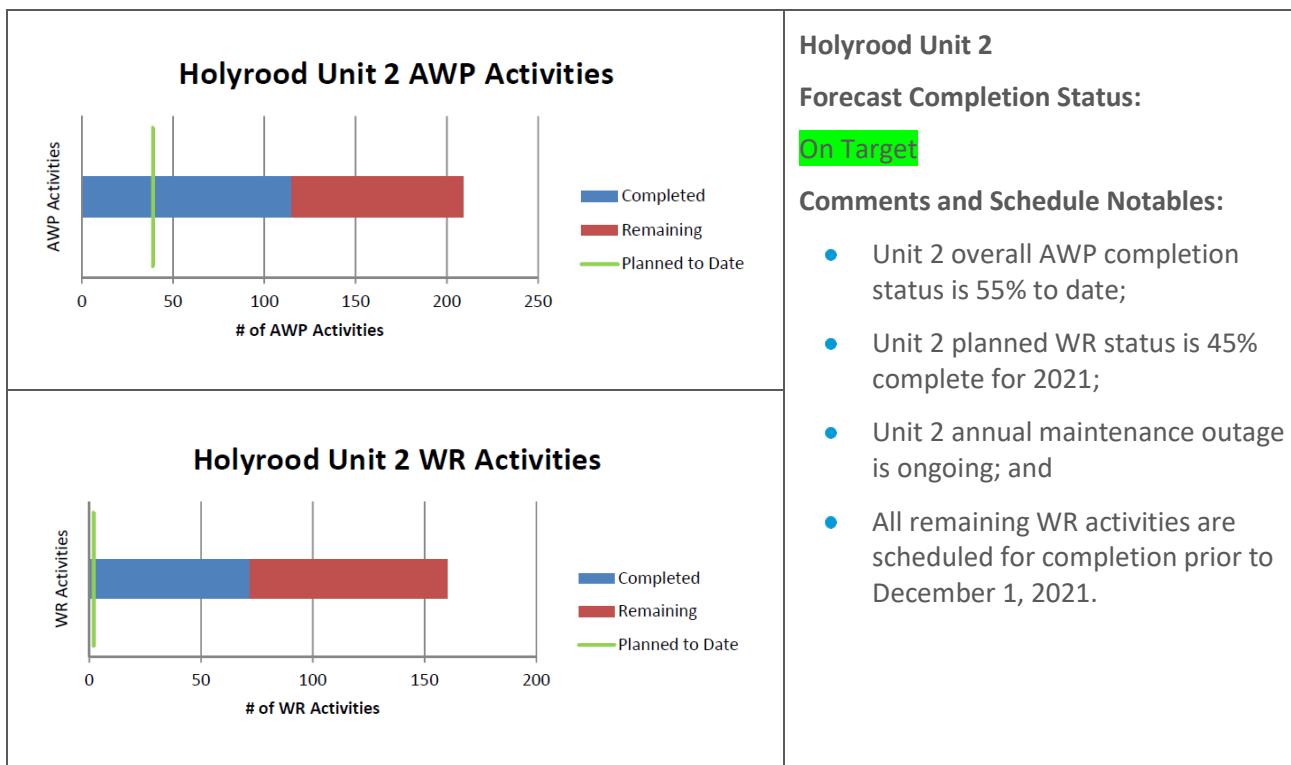

26 Hydro has continued to complete critical work in a planned and measured way in adherence with Public
27 Health orders and advice to ensure the safety of its staff and contractors and to minimize disruption to
28 work progress.

2.2 Thermal Generation

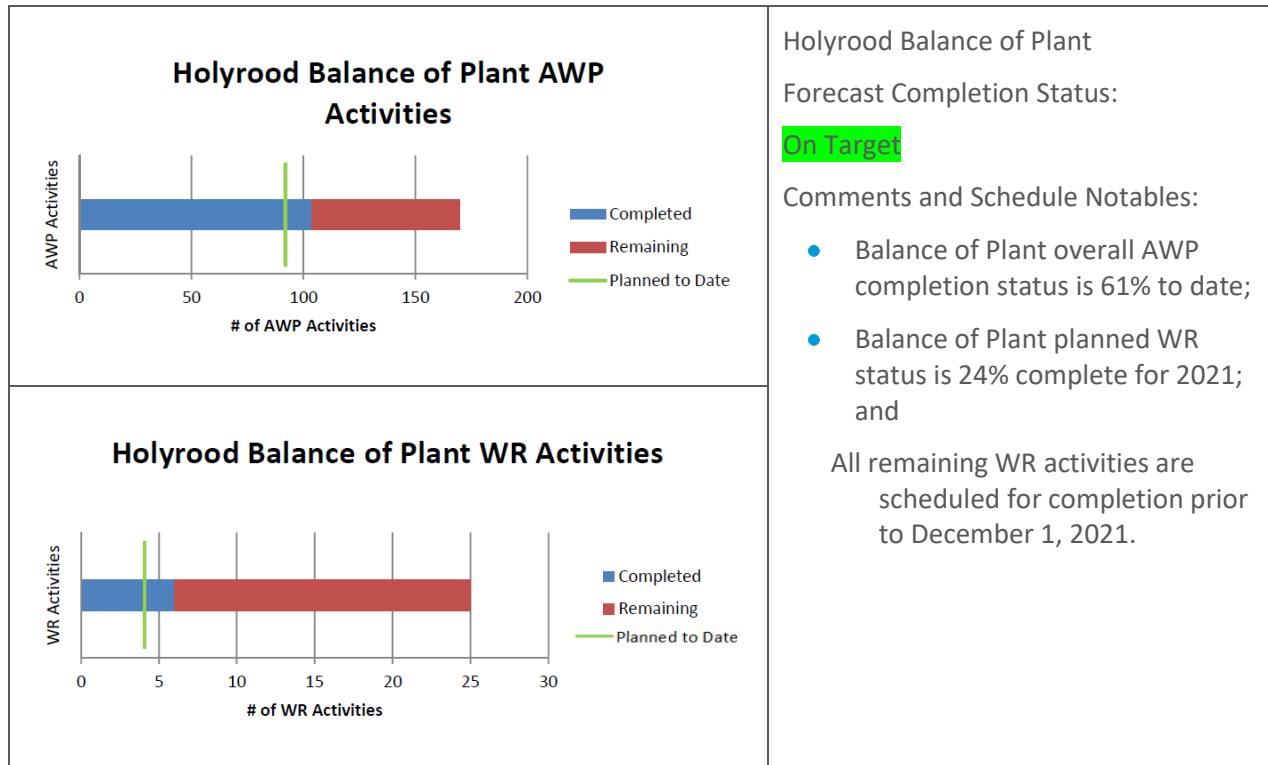

The status of AWP and WR execution at the Holyrood TGS is summarized in the charts below. A tube failure on Unit 3 has delayed its return to service;⁶ however, all planned 2021 WR work is on target for completion by December 1, 2021.

⁶ See Section 8.0 for further information.

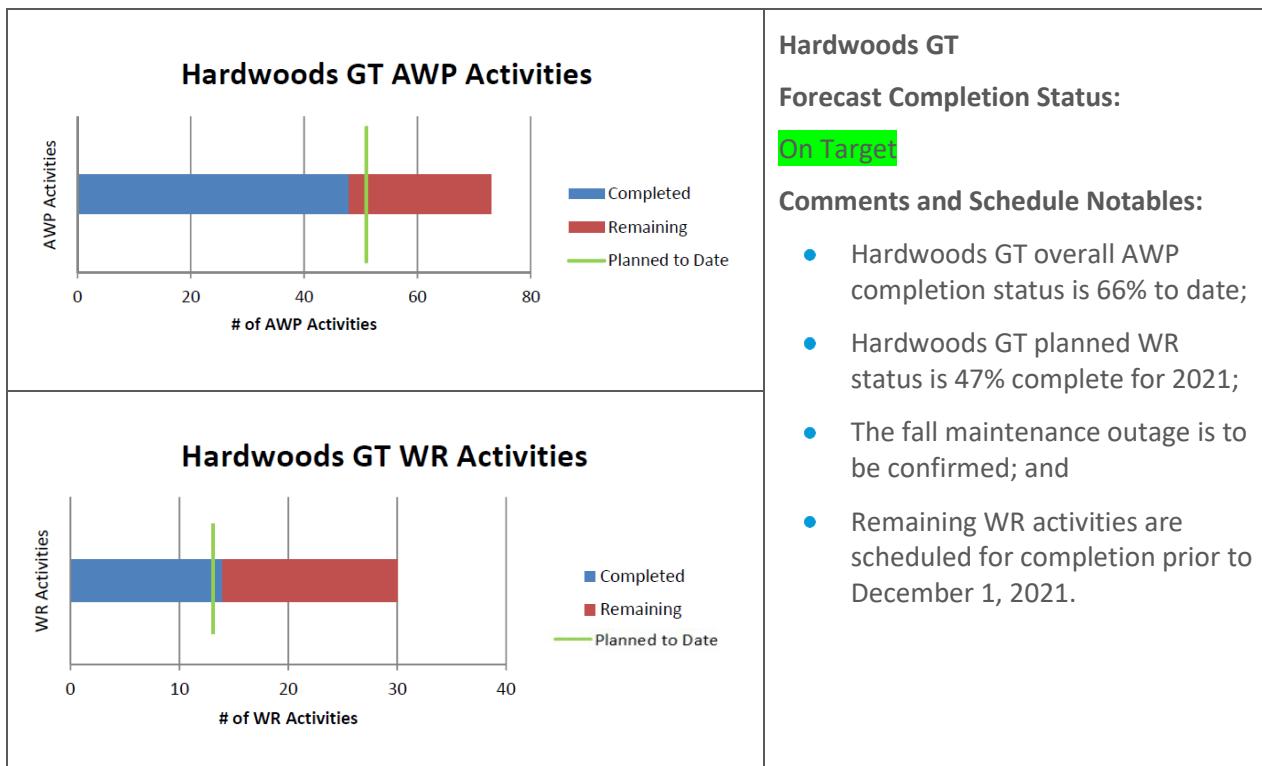

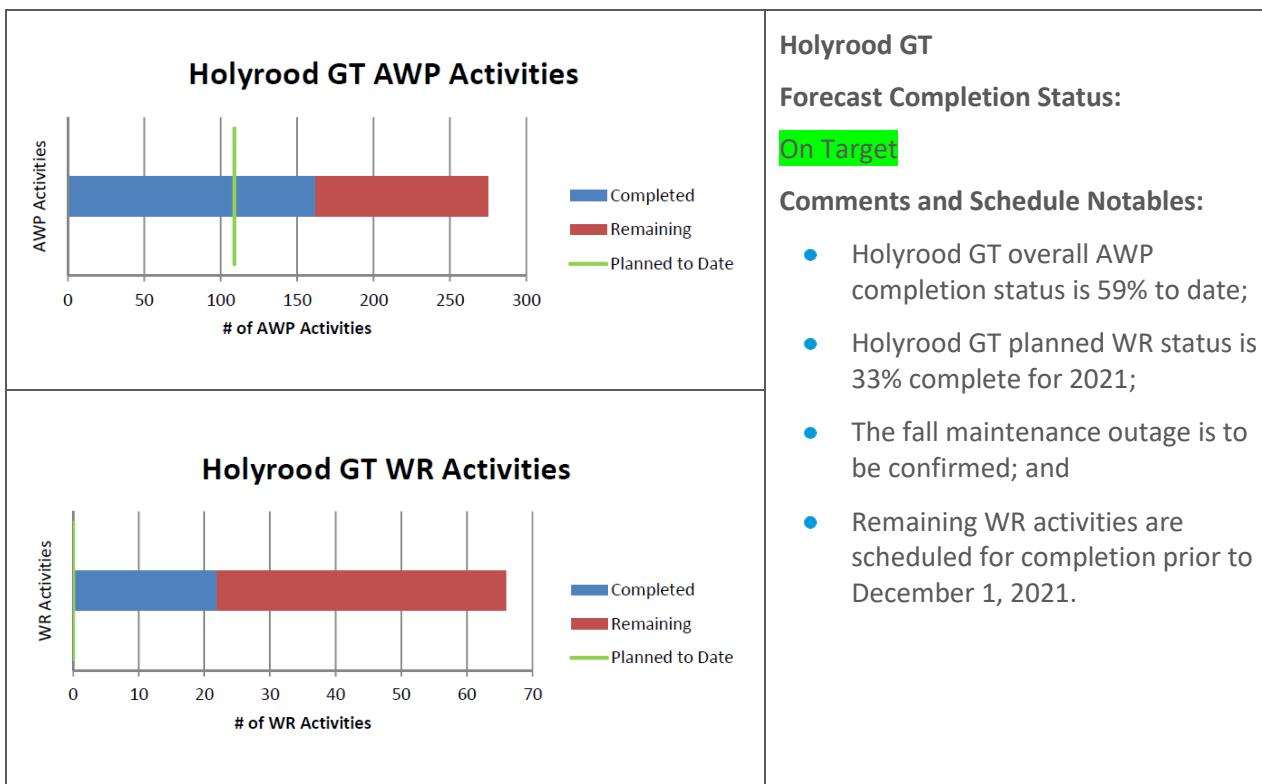

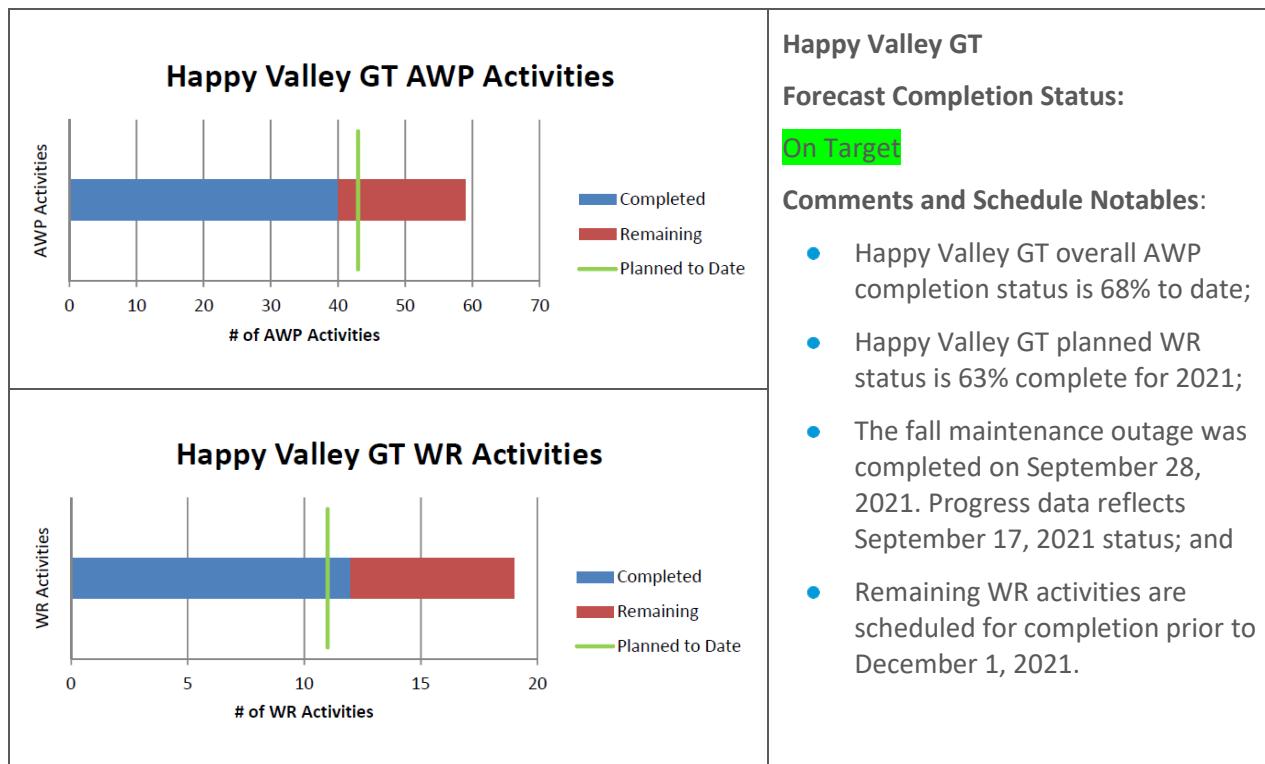

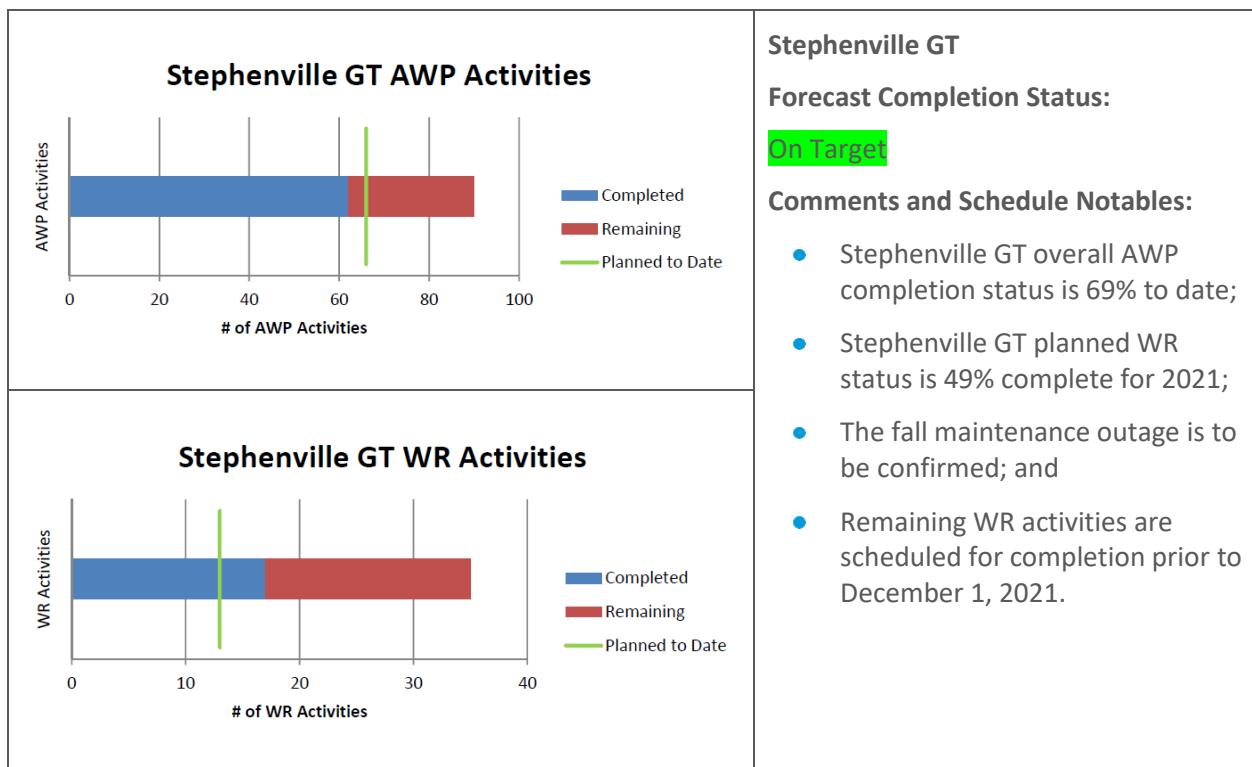

⁷ See Section 8.0 for further information.

2.3 Gas Turbine Generation

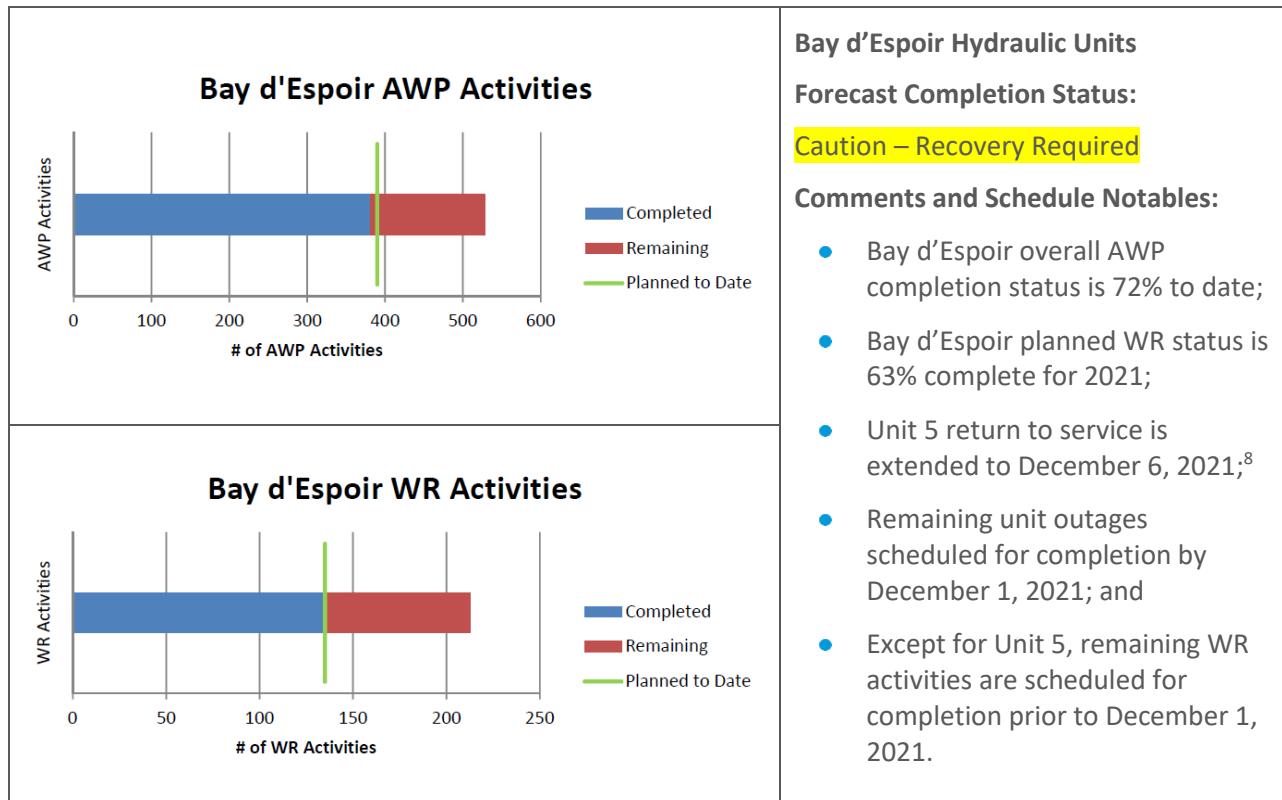

The current status of AWP and WR execution at the Holyrood Gas Turbine (“Holyrood GT”), Hardwoods Gas Turbine (“Hardwoods GT”), Stephenville Gas Turbine (“Stephenville GT”), and Happy Valley Gas Turbine (“Happy Valley GT”) is summarized in the following charts. Planned work for all gas turbines is on target for completion by December 1, 2021; however, unplanned work required elsewhere on the Island Interconnected System could change the planned fall outage schedule for the gas turbines on the Island. Should the outage schedule change for one or more gas turbines, Hydro will review and adjust its work plan as required.

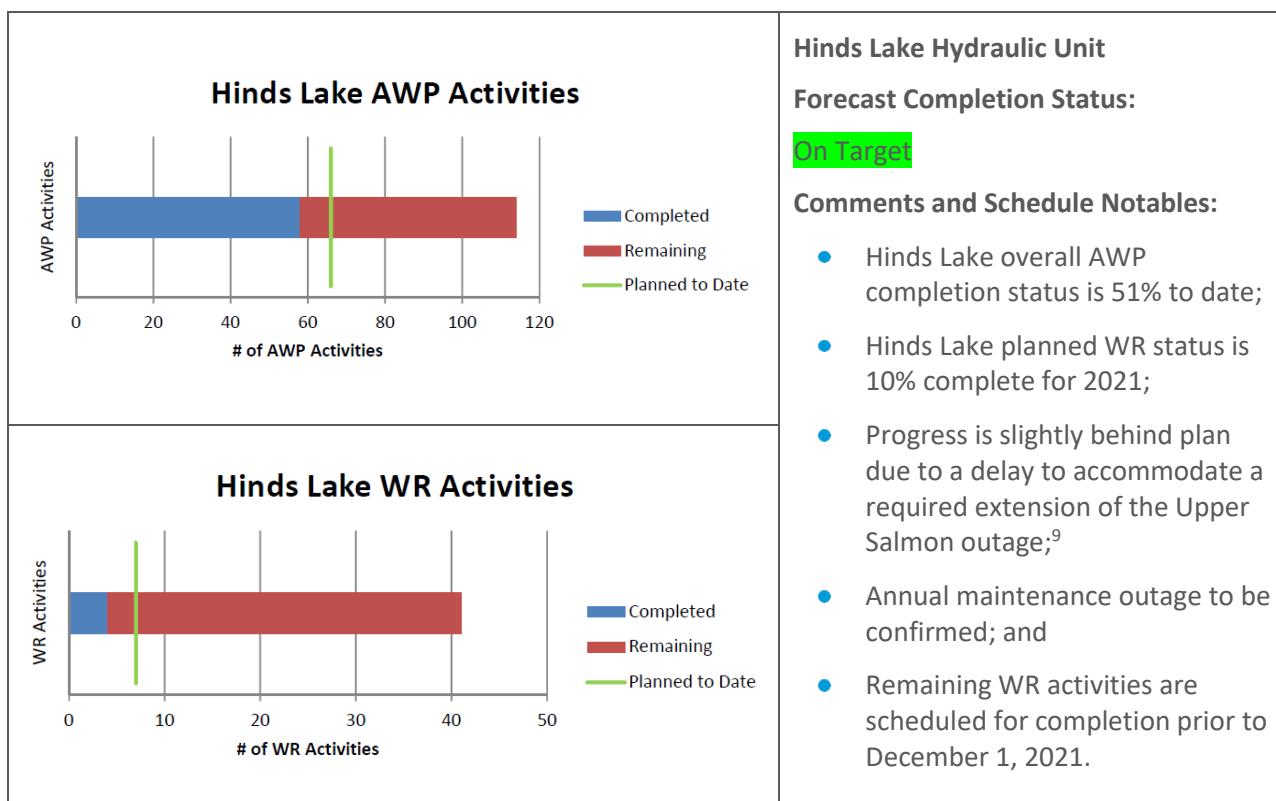

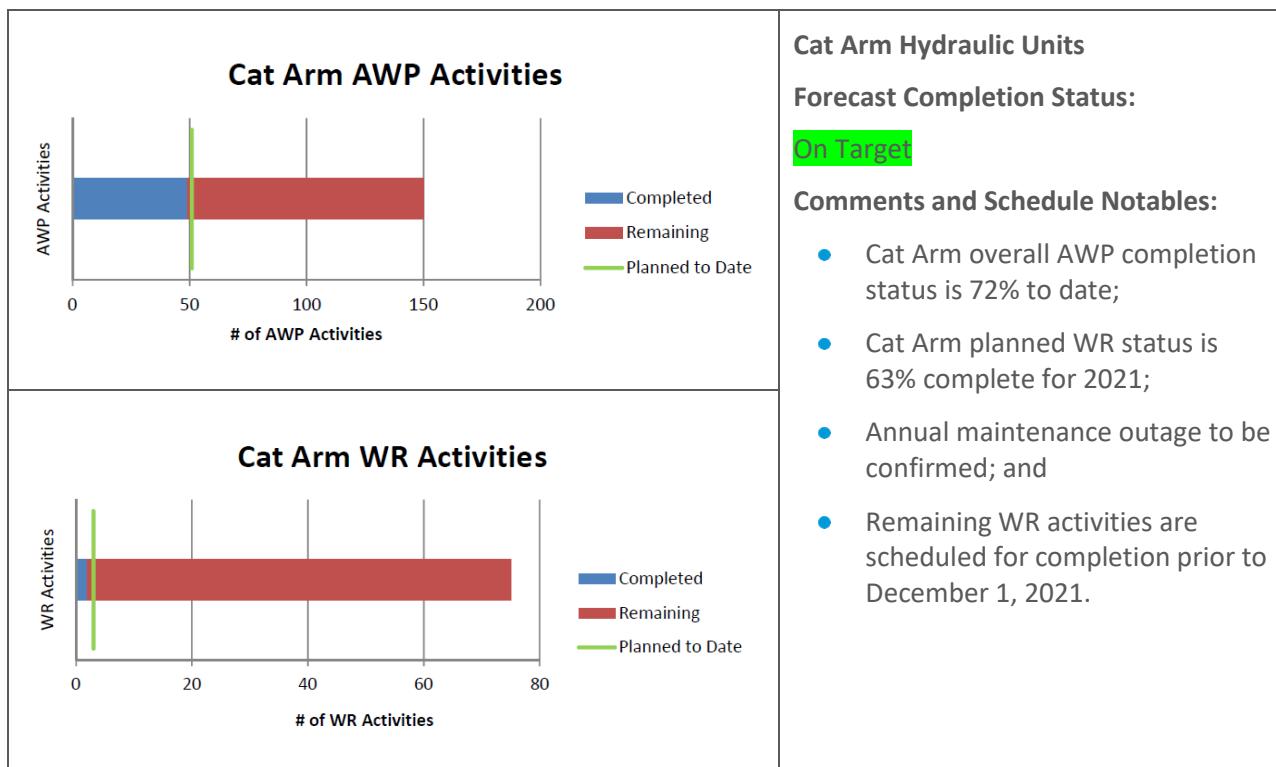

2.4 Hydraulic Generation

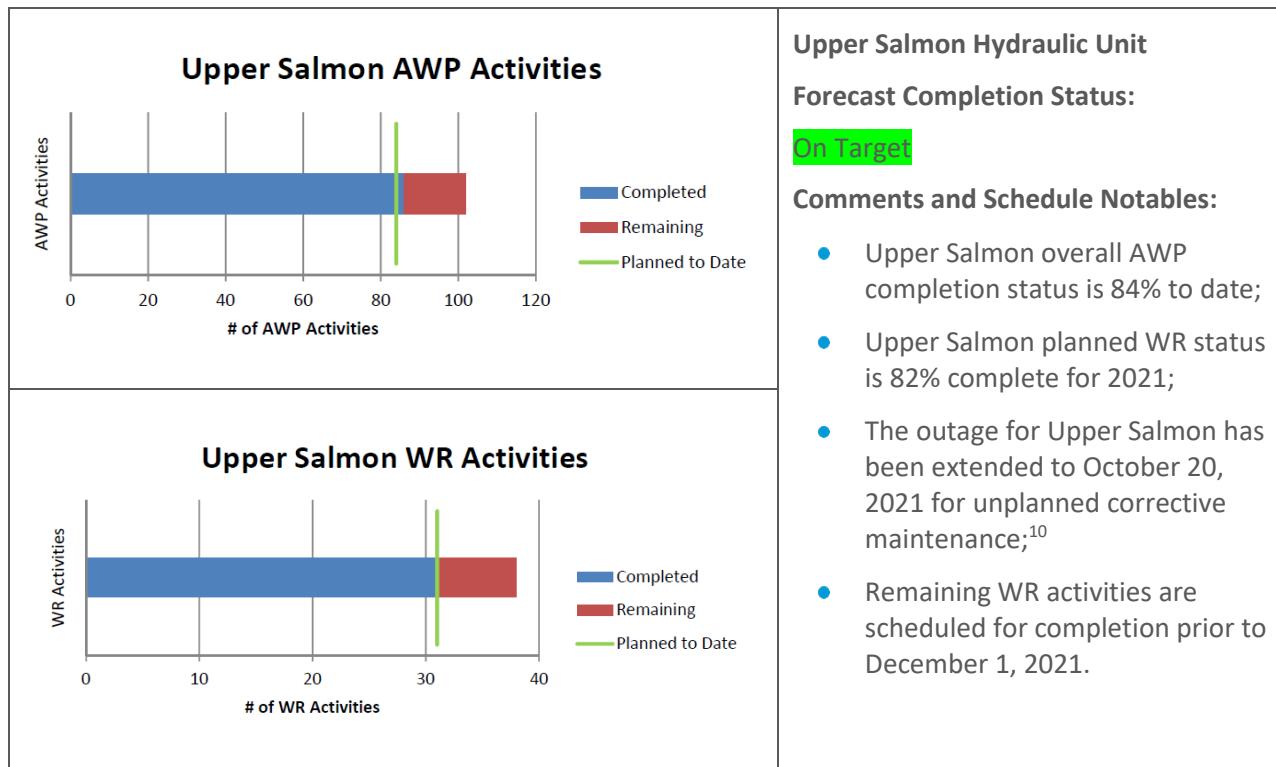

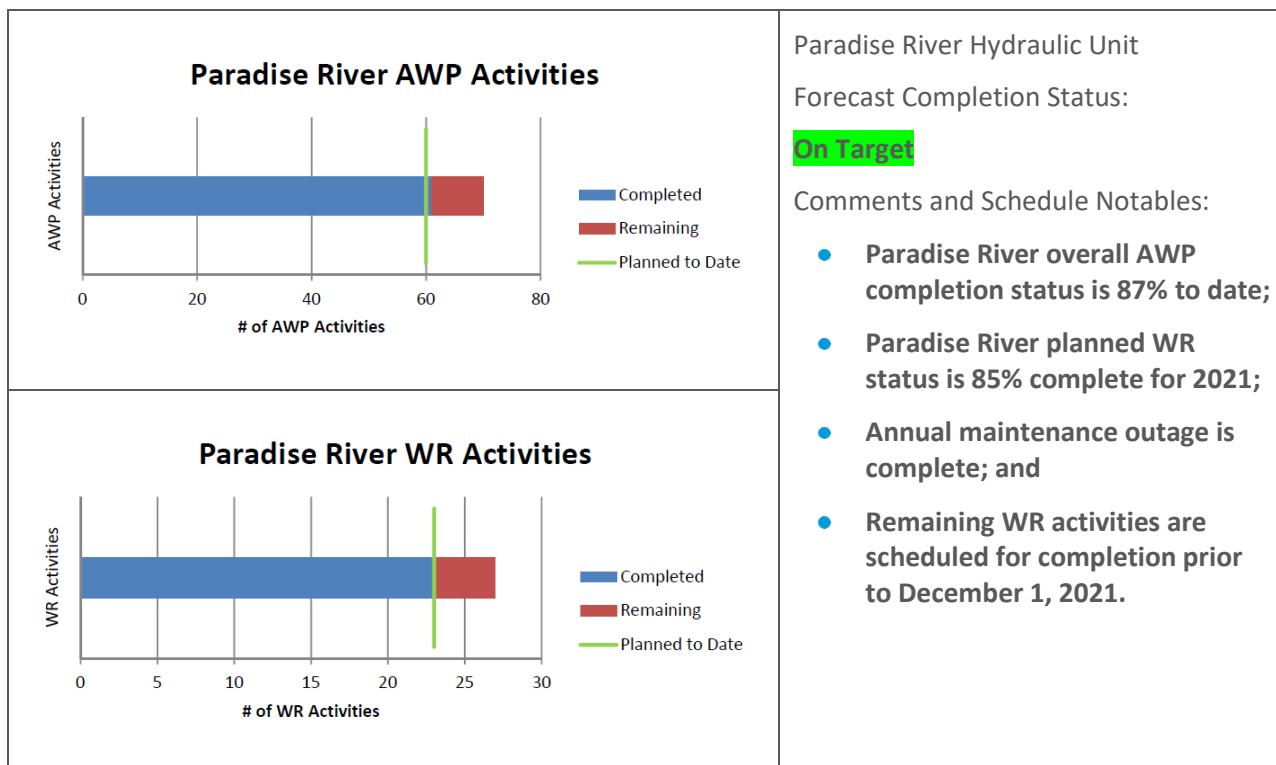

The current status of AWP and WR execution at Bay d'Espoir and other hydraulic generation facilities is summarized in the charts below. With the exception of Bay d'Espoir Unit 5, WR work for hydraulic generation facilities is on target for completion by December 1, 2021. See Section 8.0 for more information on Bay d'Espoir operation's risks and mitigation.

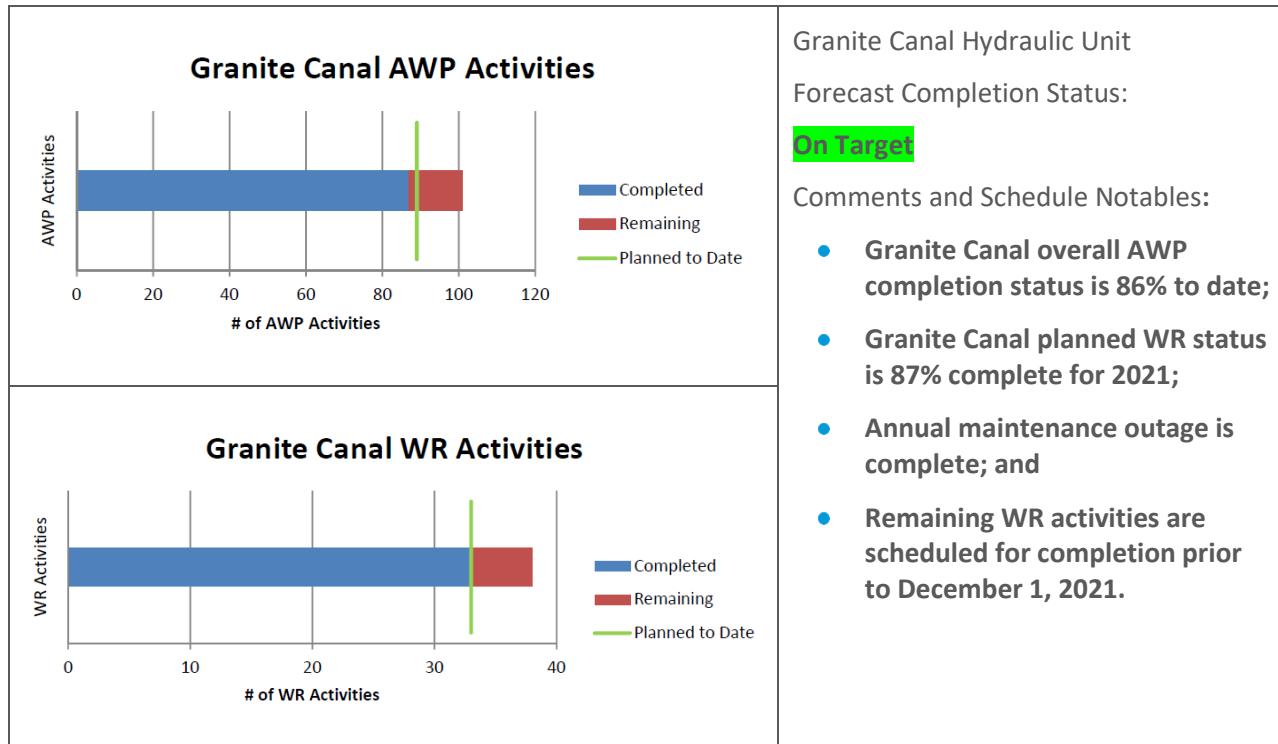

⁸ See Section 8.0 for further information.

⁹ See Section 8.0 for further information.

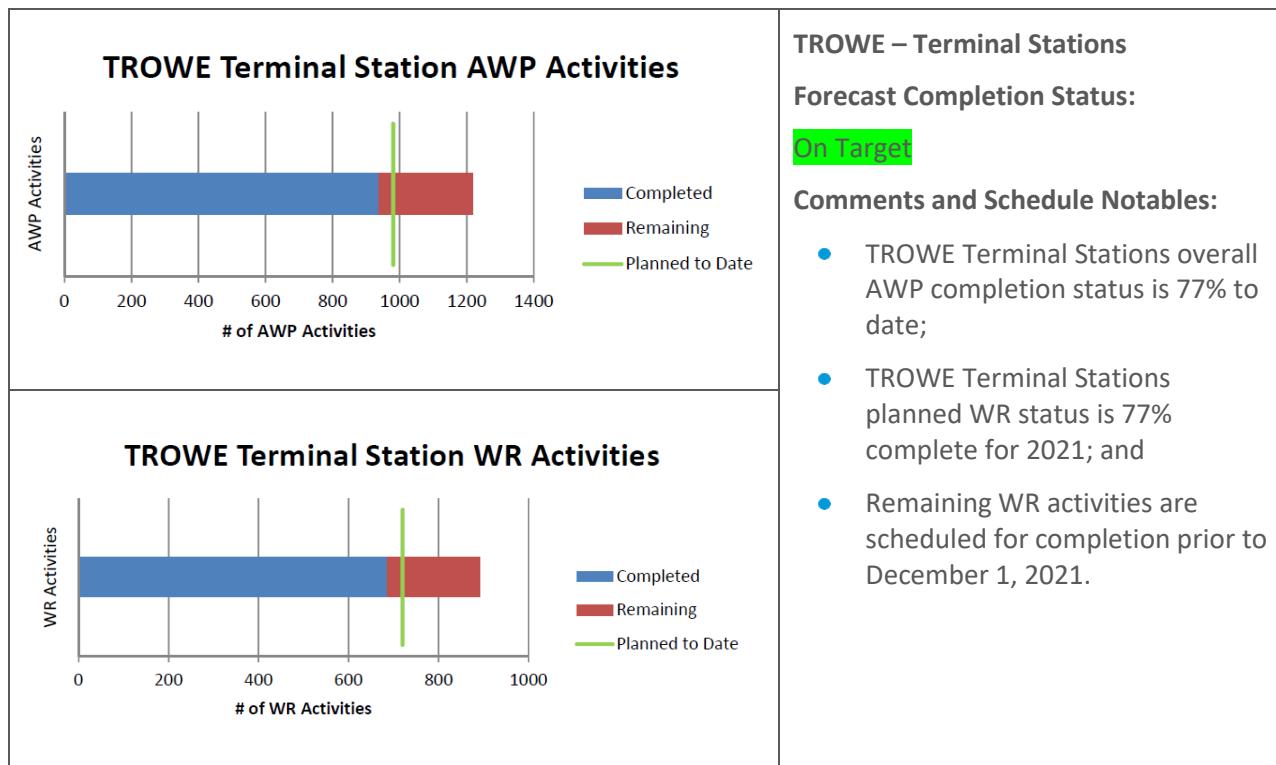

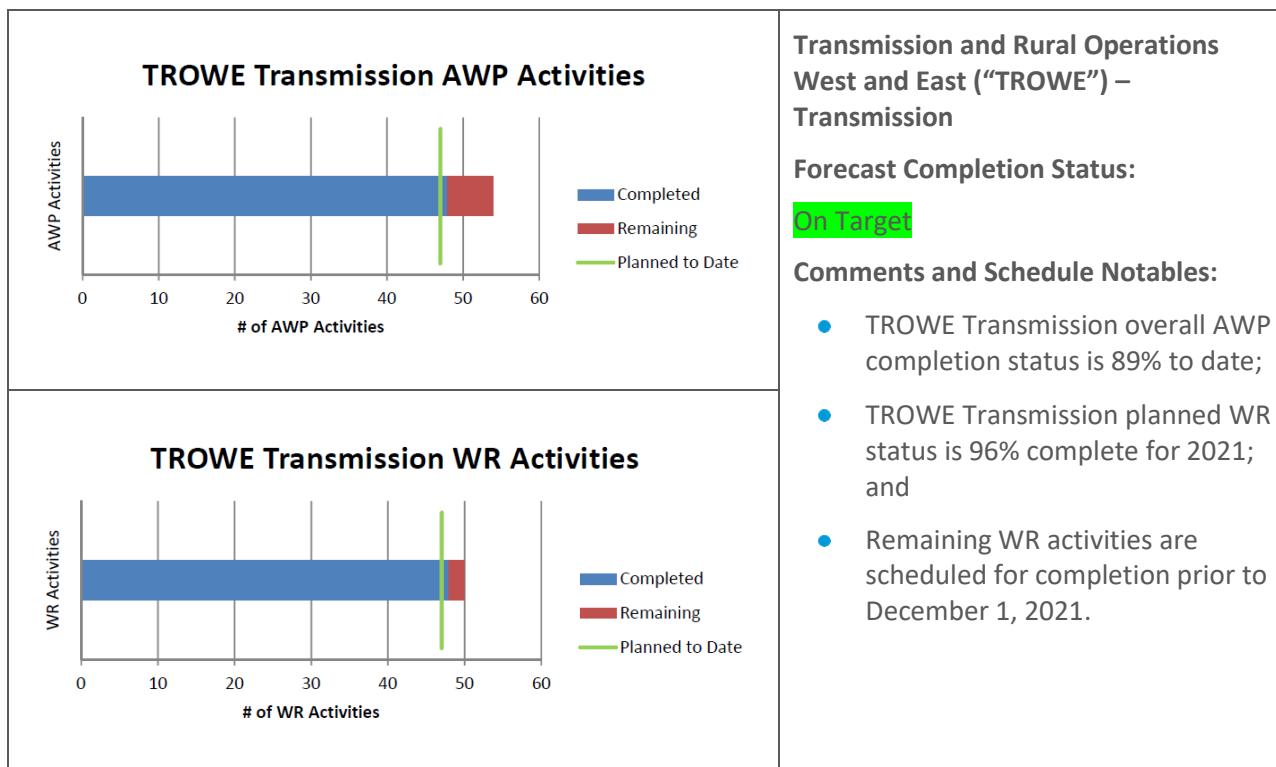

¹⁰ See Section 8.0 for further information.

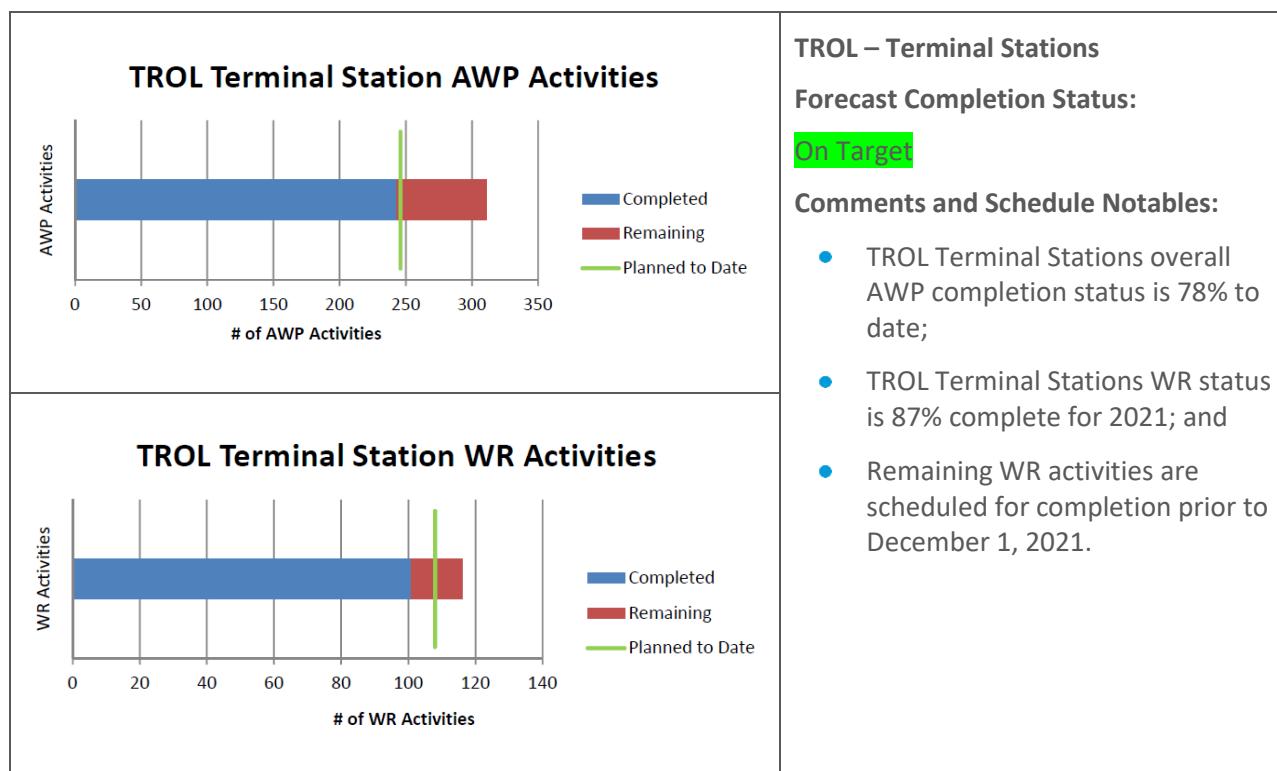

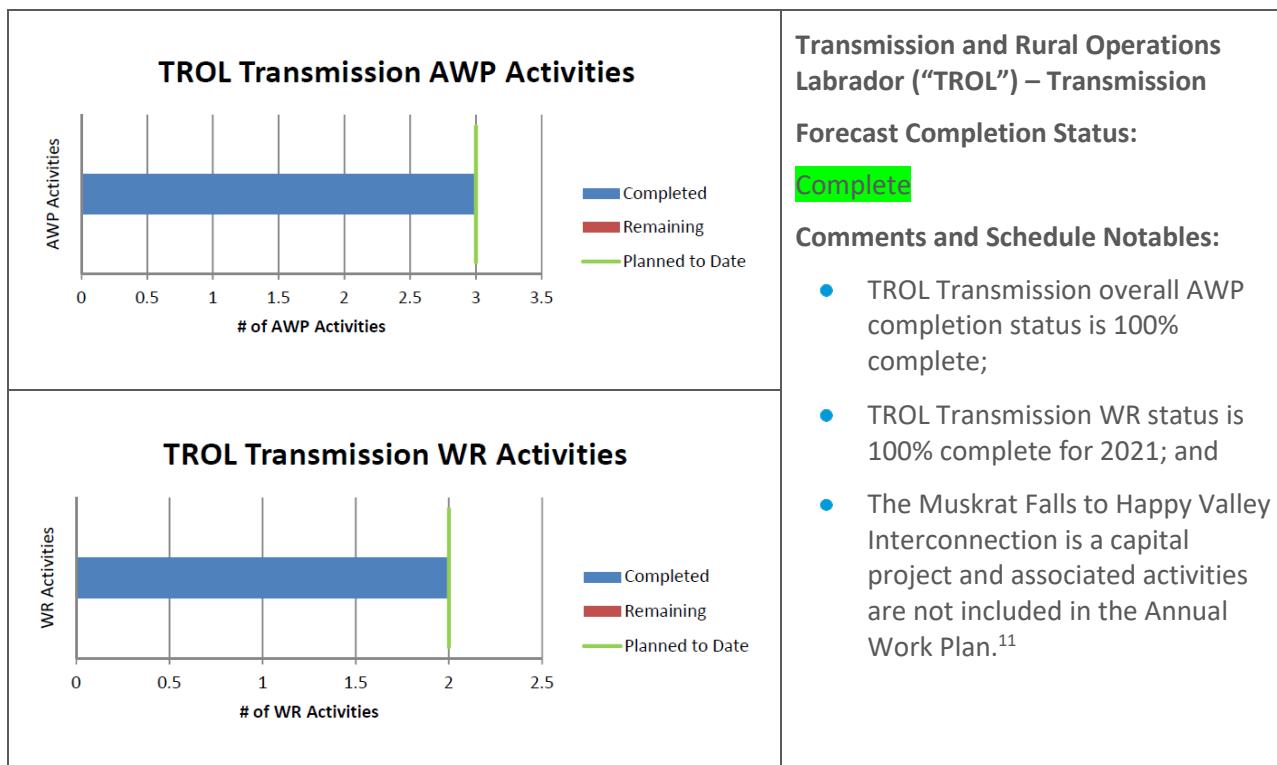

1 2.5 Transmission and Terminal Stations

2 The current status of AWP and WR execution for transmission line and terminal station facilities on both
 3 the Island Interconnected System and the Labrador Interconnected System is summarized in the charts
 4 below. All planned WR activities are scheduled for completion by December 1, 2021.

2.6 Network Services

- 2 The current status of AWP and WR execution for Network Services is summarized in the charts below.
- 3 All planned WR activities are scheduled for completion by December 1, 2021.

3.0 Status of Winter Readiness for Capital Projects

- 4 Appendix A of this report provides the status of 2021 planned capital projects that include scope related to 2021–2022 WR for the Island Interconnected System and the Labrador Interconnect System. Table 1 summarizes the status of the WR scope of these projects by asset category.

Table 1: Status of Capital Projects with WR Scope

Asset Category	Complete as of October 1, 2021	Incomplete, Expected Completion by December 1, 2021	Incomplete, Expected Completion after December 1, 2021	Total
Hydraulic Generation	1	0	2	3
Thermal Generation	1	4	0	5
Gas Turbine Generation	0	1	0	1
Terminal Stations	2	2	0	4
Transmission	0	0	0	0
Total	4	7	2	13

1 As of October 1, 2021, the WR scope for 4 of the 13 capital projects is complete. The WR scopes for 7 of
2 the 9 remaining projects are expected to be completed by November 23, 2021. The completion of 2
3 projects for Bay d'Espoir Unit 5 are delayed and the return to service of this generating unit is currently
4 expected to be on December 6, 2021. Please refer to Section 8.0 for more details on Bay d'Espoir Unit 5.

5 **4.0 Plant and Equipment Testing**

6 To ensure WR, Hydro follows a structured checklist for planning and documenting its testing and
7 inspection of plant and equipment in its thermal and hydroelectric generation facilities, as provided in
8 Appendix B and C, respectively.

9 In its transmission, terminal station, network services, and gas turbine operations, Hydro relies on its
10 AWP process to plan and track its WR testing and inspection of these assets. The AWPs in these areas
11 include planned PM activities and CM items both of which involve inspection and testing. Planned PMs
12 and CMs, and any other activities pertaining to WR, are flagged inside the respective AWPs and may be
13 tracked separately from other AWP items that are not WR related.

14 **4.1 Thermal Generation**

15 WR testing of generating equipment in Thermal Generation is focused primarily around annual unit
16 maintenance outages. Following these annual outages, units are run up and synchronized and all
17 systems are verified before the unit's operating status is determined and preparedness is confirmed.
18 Unit load tests are performed at this time as well. It can take a period of time for system conditions to
19 allow for all required load testing. The WR testing protocol includes the testing of appropriate Balance of
20 Plant components, including the black start diesel generators.¹²

21 The current status of equipment/plant testing for Thermal Generation is indicated in Appendix B. Units
22 have not yet been returned to service for the winter operating season although Unit 3 was briefly run at
23 30 MW on September 11, 2021 until it was forced off line due to a boiler tube failure. Most of the start-
24 up checks for that unit and Balance of Plant equipment were completed at that time but, as indicated in
25 Appendix B, the unit was not online for a sufficient amount of time to complete several of the tests,
26 which are still indicated as items to be completed during start-up of the unit.

¹² The black start diesel generators are run up to speed and synchronized on a weekly basis to confirm their availability. The function of all associated breakers are also tested and confirmed.

4.2 Gas Turbine Generation

Examples of WR activities that are included in the AWPs for the Holyrood GT, Hardwoods GT, Stephenville GT, and Happy Valley GT include the following:

- PMs and CMs for major components and auxiliary systems;
- Black start testing;
- Monthly operational testing; and
- Execution of capital upgrades and refurbishment.

AWP charts, which include WR activities, are shown in Section 2.3 of this report. Black start testing has been completed at the Happy Valley GT. The planned black start tests for the remaining gas turbines are anticipated to be completed before December 1, 2021 during upcoming planned maintenance outages.

Operational testing of all gas turbines has been carried out throughout the year as planned and all WR capital upgrades and refurbishments have been or will be completed by December 1, 2021.

4.3 Hydraulic Generation

WR testing of generating equipment in Hydraulic Generation is focused primarily around annual unit maintenance outages. Following these annual outages, units are run up and synchronized and all systems are verified before the unit's operating status is determined and preparedness is confirmed. Unit load tests are also performed at this time. The WR testing protocol includes the testing of appropriate Balance of Plant components.

The current status of equipment/plant testing for Hydraulic Generation is indicated in Appendix C. All inspection and testing of the Hydraulic Generation facilities is scheduled to be completed by December 1, 2021 with the exception of Bay d'Espoir Unit 5. A capital project to rewind the stator on this unit is taking longer than anticipated and the return to service date for that unit has been revised to December 6, 2021.

1 **4.4 Transmission and Terminal Stations**

2 **4.4.1 Transmission**

3 The summary of maintenance, refurbishment, and replacement criteria that Hydro uses for its
4 transmission lines was included in the “Transmission and Terminal Station Asset Management Execution
5 Report.”¹³ The report includes criteria for Wood Pole and Steel Structure Line Management Programs,
6 helicopter patrols, ground patrols, infrared inspections, wood pole treatment, and right-of-way
7 maintenance.

8 **4.4.2 Terminal Stations**

9 The Terminal Station Asset Management Overview document includes the maintenance, refurbishment,
10 and replacement criteria used by Hydro for Terminal Station assets. Version 6 of this document was
11 included in the Terminal Station Refurbishment and Modernization project report in Hydro’s “2022
12 Capital Budget Application.”¹⁴

13 **4.4.3 Transmission and Terminal Station Testing**

14 The AWPs for both Transmission and Terminal Stations are predominantly comprised of PMs and CMs,
15 which inherently involve inspection and testing. Examples of WR activities that are included in the AWP
16 work scopes include the following:

- 17 • Transformer PMs and CMs;
18 • Annual exercises on all high-voltage circuit breakers;
19 • Exercise of 230 kV circuit breakers from protection during PM inspections;
20 • Infrared scans at all terminal stations;
21 • Annual ultrasonic leak testing on all terminal station air systems; and
22 • Annual helicopter patrol of transmission lines prior to the winter season.

23 AWP charts, which include WR activities, are shown in Section 2.5 of this report. All WR activities are
24 planned for completion by December 1, 2021.

¹³ “Transmission System and Terminal Station Asset Management Execution Report,” Newfoundland and Labrador Hydro, April 12, 2021.

¹⁴ “2022 Capital Budget Application,” Newfoundland and Labrador Hydro, rev. 1, September 17, 2021 (originally filed on August 2, 2021), vol. II, sch. 8, tab 10, att. 1.

1 **4.5 Network Services**

2 The AWP for Network Services is comprised of PMs and CMs which inherently involve inspection and
3 testing of various assets and systems. AWP charts, which include WR activities, are shown in Section 2.6
4 of this report. As of the filing date, all WR activities are complete.

5 **5.0 Generation Outage Schedule**

6 As part of its WR reporting, Hydro typically provides its Master Generation Outage Schedule for the
7 period September 1 to December 31 of the reporting year. At this time, a rework of the schedule for
8 remaining maintenance activities is underway given the emergence of unplanned extension
9 requirements for Unit 1 and the forced outage state of Unit 3 at the Holyrood TGS, combined with the
10 unplanned extension of outages to Bay d'Espoir Unit 5 and Upper Salmon. Given that the plan remains
11 in development, Hydro is unable to share the Master Generation Outage Schedule at this time.

12 As reflected in Section 2.0, a number of unit annual maintenance programs have been completed across
13 the fleet and Hydro plans to complete annual maintenance on all its units in advance of the winter
14 season. At this time, maintenance activities remain underway on all three units at the Holyrood TGS,
15 Upper Salmon, and Units 5 and 6 in Bay d'Espoir. Annual maintenance programs remain to be
16 completed on the following: Cat Arm, Hinds Lake, Hardwoods GT, Holyrood GT, and Stephenville GT.
17 Note that with the exception of Bay d'Espoir Unit 5, there are no planned outages of generation
18 equipment extending beyond December 1, 2021. Bay d'Espoir Unit 5 is expected to return to service on
19 December 6, 2021.¹⁵ Hydro will provide its Master Outage Schedule in the November 2021 filing of the
20 2021–2022 Winter Readiness Planning Report.

21 **6.0 Critical Spares**

22 **6.1 Overview**

23 In 2014, Hydro completed extensive reviews of its critical spares requirements in all three areas of its
24 generation operations: hydraulic generation; thermal generation (Holyrood TGS); and the gas turbines in
25 Hardwoods and Stephenville. These reviews included a detailed analysis of asset criticality and spare
26 parts in reference to several factors, including impact on generation reliability and replacement part
27 availability. A second phase of spares analysis was completed in 2017 for Hydro's hydraulic generation

¹⁵ See Section 8.0 for further information.

1 facilities and 569 additional items were added to the critical spares list. This year, Hydro has included
2 details on its critical spares status for the Happy Valley GT.

3 Hydro's evaluation of critical spares is an ongoing process with consideration given to asset condition,
4 level of criticality, parts availability, order lead time, and cost. In some cases, a balanced consideration of
5 these factors may result in a decision to not procure a part into inventory where the risk to reliability is
6 judged to be low and/or other measures are available to mitigate against generation unavailability.

7 Included in this report is a full update on the status of Hydro's critical spares, as of September 30, 2021,
8 for the 2021–2022 winter season. This update includes a detailed listing of critical spares requirements
9 for each area of generation operations and the status of each item.

10 **6.2 2021–2022 Winter Season**

11 Hydro's critical spares status leading into the 2021–2022 winter season is strong. For Thermal
12 Generation (Appendix E), Gas Turbines (Appendix F), and Hydraulic Generation (Appendix G), a total of
13 2,518 critical spares have been identified by Hydro's three generation operations areas. Of this total,
14 2,500 items are in stock (>99%) and 18 items are in the procurement process.

15 **6.2.1 Thermal Generation**

16 As summarized in Table 2, there are nine critical spare stock items currently not in stock. All of these
17 items are on order through Hydro's Supply Chain Department and are in varying stages of procurement.
18 One item is being refurbished and is expected to ship November 9, 2021, while another is expected on
19 site October 15, 2021. The remaining seven items are currently out for quote.¹⁶ Supply Chain is
20 expediting the purchase of these items and an update on these and all other outstanding items will be
21 included in the November 2021 filing of the 2021–2022 Winter Readiness Planning Report.

22 The complete list of critical spares for Holyrood TGS is provided in Appendix E. Note that this list
23 contains three inventory status descriptions: "In Stock;" "Non-Stock;" and "On Order." "In Stock" means
24 that the part is in inventory, "Non-Stock" means that the part is critical but it is not necessary to keep it
25 in stock (e.g., because the part is readily available locally), and "On Order" means that the part is
26 required to be in stock but is not. For the "Non-Stock" parts, an explanation of the reason why it is
27 "Non-Stock" is provided in the "Notes" column in Appendix E.

¹⁶ Hydro is awaiting quotes for five items, one of which is listed as a critical spare for three different components. For reporting purposes this is counted as three items.

Table 2: Critical Spares for Thermal Generation

Critical Spare Items	Quantity
In Stock	749
On Order	9
Not Yet On Order	0
Total	758

1 6.2.2 Gas Turbines

- 2 Table 3 summarizes the status of spare parts for the Hardwoods GT, Stephenville GT, Holyrood GT, and
 3 Happy Valley GT and Appendix F contains detailed lists for each gas turbine.

Not Yet On Order	0	0	0	0 (0.00%)
Total	90	403	50	543

- 4 The spares list for the Hardwoods GT and Stephenville GT is detailed in Appendix F and contains the
 5 critical spares identified for these units. This list contains 90 critical spare parts. 100% of these spares
 6 are in stock.
- 7 The spares list for the Holyrood GT is detailed in Appendix F and includes the critical spares for this unit.
 8 This list contains 403 critical items. 100% of these spares are in stock.
- 9 The spares list for the Happy Valley GT is detailed in Appendix F and includes the critical spares for this
 10 unit. Of the 50 items identified as critical spares, 47 of these are in stock, and 3 of these are on order. All
 11 items are expected to be in stock prior to December 1, 2021.
- 12 Hydro has utilized a number of its spare parts to address deficiencies found during the 2021
 13 maintenance season. These items have been identified and the spare components have been
 14 replenished. Fall maintenance outages may result in the requirement to replenish additional spare
 15 components.

6.2.3 Hydraulic Generation

Table 4 provides an overview of the critical spares program for Hydraulic Generation and Appendix G contains detailed spares lists for the various facilities.

Table 4: Critical Spares for Hydraulic Generation

Critical Spare Items	Quantity

The six outstanding items for 2021 include:

- 1) Bay d'Espoir Unit 5/6 spare rotor pole;
- 2) Bay d'Espoir Unit 7 spare rotor pole;
- 3) Cat Arm lightning arrestor;
- 4) Granite Canal computer management unit;
- 5) Granite Canal power supply; and
- 6) Upper Salmon T2 transformer.

Items 1 through 3 have been ordered and are expected to be delivered by November 30, 2021. Items 4 and 5 have been ordered and are expected to be delivered by October 31, 2021. Item 6 was successfully delivered in August 2021; however, on site field testing revealed an internal grounding issue. The manufacturer is in the process of packaging the unit to ship to the United States of America for repairs. The expected delivery of the transformer back to Upper Salmon is to be determined upon delivery to the repair facility.

7.0 Near-Term Reliability and Resource Adequacy

This section discusses the near-term reliability and resource adequacy of the Newfoundland and Labrador Interconnected System for the upcoming winter period. It provides a summary of the analysis presented in Hydro's "Near-Term Reliability Report."¹⁷

¹⁷ "Near-Term Reliability Report," Newfoundland and Labrador Hydro, May 17, 2021.

1 The reliability indices in this near-term report include both annual and monthly Loss of Load Hours
 2 (“LOLH”), Expected Unserved Energy (“EUE”), and Normalized EUE¹⁸ for the period of December 1, 2021
 3 to May 31, 2022. The analysis considers the different types of generating units (i.e., thermal, hydro, and
 4 wind) in Hydro’s fleet, contractual sales, transmission constraints, peak load, load forecast uncertainty,
 5 and capacity assistance programs. Similar to previous analyses, a range of projected availabilities was
 6 considered for the Holyrood TGS. A detailed discussion of the modelling approach used can be found in
 7 Hydro’s “Near-Term Reliability Report.”¹⁹

8 Hydro intends to file an update of its assessment of near-term reliability and resource adequacy on
 9 November 15, 2021.

10 **7.1 Assumptions**

11 **7.1.1 Asset Performance**

12 Hydro updates its assumptions for forced outage rates for all generation assets on an annual basis.²⁰
 13 Table 5 presents the forced outage rates used in this analysis.

Table 5: Forced Outage Rates for Hydro-Owned Assets

Asset	Reliability Metric
Hydraulic Units	DAFOR ²¹ = 2.6%
Holyrood Thermal Units – Base Assumption	DAFOR = 15%
Holyrood Thermal Units – Sensitivity Assumptions	DAFOR = 18%, 20%
Holyrood Gas Turbine	DAUFOP ²² = 4.9%
Happy Valley Gas Turbine	DAUFOP = 12%
Stephenville Gas Turbine	DAUFOP = 30%
Hardwoods Gas Turbine	DAUFOP = 30%
Diesels	DAUFOP = 8%

¹⁸ Normalized EUE provides a measure relative to the size of the assessment area. It is defined as: [(Expected Unserved Energy)/(Net Energy for Load)] x 1,000,000 with the measure of per unit parts per million.

¹⁹ “Near-Term Reliability Report,” Newfoundland and Labrador Hydro, May 17, 2021.

²⁰ Forced outage rates are updated consistent with the Forced Outage Rates Methodology presented in “Reliability and Resource Adequacy Study – 2019 Update,” Newfoundland and Labrador Hydro, November 15, 2019.

²¹ Derated Adjusted Forced Outage Rate (“DAFOR”).

²² Derated Adjusted Utilization Forced Outage Probability (“DAUFOP”).

- 1 For units not owned by Hydro, the forced outage rates used in Hydro's modelling are determined using
 2 industry averages.²³ Forced outage rates used in this analysis are presented in Table 6.

Table 6: Forced Outage Rates – Third-Party Owned Assets

Asset	Reliability Metric
Hydraulic Units	DAFOR = 5.7%
Gas Turbines	DAUFOP = 8%
Corner Brook Cogen	DAUFOP = 17.48%

3 7.1.2 Labrador-Island Link Assumptions

4 As has been observed in prior near-term reliability reports, results of Hydro's analysis indicate that
 5 reliable operation of the Labrador-Island Link ("LIL") is shown to provide significant system reliability
 6 benefits even at low power transfer levels. Given the completion of Interim Bipole Trial Operations it is
 7 likely that the LIL will be available for some level of power transfer throughout the 2021–2022 winter
 8 operating season; however, to provide a fulsome view of potential system reliability, Hydro has
 9 prepared this analysis in a manner consistent with prior analysis by considering and analyzing system
 10 reliability through the entire reporting period with an assumption that the LIL will not be available for
 11 the reporting period. Please note that since the filing of Hydro's "Near-Term Reliability Report,"²⁴ the LIL
 12 has been successfully tested and operated at 315 MW, an increase from the prior established
 13 operational limit of 225 MW.

14 With respect to the LIL, once modelled as in-service, the forced outage rate is modelled with a declining
 15 forced outage rate (i.e., improving performance) in order to capture any testing activities and potential
 16 operational unknowns during the first years of operation.²⁵ For the purpose of this analysis, the LIL is
 17 assumed to be available at its full capacity on the in-service date, supported by the full availability of the
 18 Muskrat Falls generating units. The delivery of the Nova Scotia Block²⁶ is also assumed. Please note that
 19 as per the Energy and Capacity Agreement, in instances where the LIL is fully unavailable, Hydro is not

²³ As provided in the Canadian Electricity Association Generating Equipment Reliability Information System and the North American Electric Reliability Corporation Generating Availability Data System.

²⁴ "Near-Term Reliability Report," Newfoundland and Labrador Hydro, May 17, 2021.

²⁵ In year one of operation, the monopole forced outage rate is assumed to be 10% for each pole. The forced outage rate assumption decreases to 2.5% in year two, 1% in year three, and finally to the long-term forced outage rate of 0.556% per pole from year four onwards.

²⁶ Pursuant to the Energy and Capacity Agreement between Nalcor Energy and Emera Inc., the Nova Scotia Block is a firm annual commitment of 980 GWh, to be supplied from the Muskrat Falls Hydroelectric Generating Facility on peak.

1 obligated to deliver the Nova Scotia Block. In instances where the LIL is partially available, the Nova
2 Scotia Block is delivered on a *pro-rata* basis.

3 **7.1.3 Availability of Capacity Assistance Agreements**

4 Capacity assistance refers to curtailable loads and customer generation available to the utility under
5 contract to provide capacity on an as needed basis. Hydro currently has an agreement with Corner
6 Brook Pulp and Paper Limited (“CBPP”) for capacity assistance. The current agreement expires April 30,
7 2023 ensuring the availability of this agreement to increase system reliability should the LIL be
8 unavailable in the 2021–2022 winter operating season. Following unplanned extensions of the
9 maintenance outages for Holyrood TGS Unit 1 and Upper Salmon, as well as a prolonged forced outage
10 of Holyrood TGS Unit 2, Hydro and CBPP entered into an agreement for capacity assistance outside of
11 the winter period defined in the agreement pursuant to Section 2.06 of the Amended and Restated
12 Capacity Assistance Agreement. Under this agreement, CBPP is providing Hydro with up to 60 MW of
13 capacity assistance from September 24 to October 8, 2021 and 80 MW of capacity assistance from
14 October 9 to October 31, 2021.

15 Since 2014, Hydro has engaged Vale Newfoundland and Labrador Limited (“Vale”) through various
16 agreements to provide capacity assistance from its diesel generators. Hydro has engaged Vale to provide
17 7.6 MW of capacity assistance through the 2021–2022 winter operating season.

18 **7.2 System Energy Capability**

19 In order to reliably serve its customers, Hydro maintains minimum storage limits to ensure that it is
20 capable of meeting customer energy requirements. In the current system, these limits represent the
21 point at which Holyrood generation would be required to be maximized to ensure Hydro could continue
22 to meet customer requirements in consideration of the historical dry sequence. In early 2021, Hydro
23 established minimum storage limits to April 30, 2022 in consideration of the event that the LIL is unable
24 to deliver energy to the Island Interconnected System for three months during winter 2022.²⁷ This will
25 help ensure sufficient storage to reliably serve customers should the LIL become unavailable during the
26 months that have historically high customer loads and low inflows into the system.

27 The limits do not consider the availability of imports, though imports can provide an additional
28 opportunity to supplement energy in storage and economically reduce the amount of thermal

²⁷ The three winter months are January to March 2022, inclusive.

1 generation required to maintain sufficient energy in storage. Imports on the Maritime Link and thermal
2 generation above minimum are available during the winter 2021–2022 operating season, if required.
3 Otherwise, imports will be used to offset thermal generation to the extent that it is economically and
4 technically feasible.

5 Upper Salmon was scheduled to return to service from its annual planned maintenance on August 20,
6 2021. However, during inspections the rotor rim guidance blocks exhibited defects resulting in integrity
7 concerns. As a result of the extended outage, it was determined that bypass of Upper Salmon was
8 required to support storage in the Long Pond reservoir. On August 27, 2021 bypass of Upper Salmon
9 commenced and is expected to continue until Upper Salmon returns to service.²⁸ Planned bypass
10 volumes are such that they offset generation at Bay d'Espoir, with adjustments to bypass flow to
11 maintain Long Pond reservoir storage in response to inflows and deliveries to the Island Interconnected
12 System via the LIL.

13 At this time, Hydro does not foresee using production from standby generation to support reservoir
14 levels. Regular assessments of storage at a reservoir level basis are also completed to ensure that each
15 hydraulic generating unit remains capable of producing at full rated output through the winter period.

16 As of September 30, 2021, Hydro's total system energy in storage was 1,573 GWh; 665 GWh above the
17 minimum storage limit of 908 GWh for September 2021. Figure 1 plots the 2020 and 2021 storage
18 levels, minimum storage limits, maximum operating level storage, and 20-year average aggregate
19 storage for comparison.

²⁸ See Section 8.0 for further information.

7.3 Load Forecast

Customer load requirements in this analysis are consistent with those used in Hydro's "Near-Term Reliability Report."²⁹ Newfoundland and Labrador's economic growth was greatly affected by the global economic impacts of the COVID-19 pandemic in 2020. The Island Interconnected System utility and industrial load requirements remain largely unchanged for the 2021–2022 winter operating season compared to the previous winter operating season and continue to reflect a mostly stagnant outlook for the provincial economy in the near term. The total Labrador Interconnected System customer coincident demand forecast requirements remained largely unchanged compared to the previous year. Details of Hydro's current forecasts for the 2021–2022 winter operating season are provided in Table 7 through Table 9.

An update to Hydro's near-term load forecast will be provided in Hydro's Near-Term Reliability Report, anticipated to be filed by November 15, 2021. The update will include a reduction in demand for North

Total Newfoundland and Labrador Interconnected System Requirements (including Island Interconnected System P90 Demand Adjustment)	2,229

³⁰ Note that the forecasted Island Industrial customer requirements presented include demand requirements consistent with prior established full operational requirements at NARL. Since filing its “Near-term Reliability Report” in May 2021, Hydro has received indication that NARL will remain in warm idle mode through winter 2021–2022. This will result in a reduction in Industrial customer coincident demand requirements of approximately 25 MW. Given that the results presented in subsequent sections have been prepared using the forecast provided in Table 7, Hydro did not adjust the forecast presented.

7.4 Scenarios Considered and Results

The following subsections provide a description of the 12 scenarios considered for winter 2021–2022, and the anticipated system reliability in each case (i.e., LOLH, EUA, and Normalized EUA results). Note that the results presented for Scenarios 1–10 include the potential for lost load assuming Hydro serves the demand and energy requirements previously forecast for NARL. Since filing its “Near-Term Reliability Report,”³¹ Hydro has received indication that NARL will remain in warm idle mode through winter 2021–2022. This will have a positive impact on LOLH and EUA for Scenarios 1–10, comparable to the benefit that can be observed when comparing results for Scenarios 11 and 12 against results for Scenarios 6 and 8, respectively.

7.4.1 Scenarios

Twelve scenarios were analyzed to assess system reliability under a range of potential system conditions.

- **Scenario 1:** Assumes that the LIL will be available at full capacity in November 2021. This case assumes a DAFOR of 15% for the Holyrood TGS as well as the retirement of the Holyrood TGS, Hardwoods GT, and Stephenville GT on March 31, 2023. No LIL deliveries are contemplated in advance of November 2021.
- **Scenario 2:** Varies from Scenario 1 by increasing the Holyrood TGS DAFOR to 20%.
- **Scenario 3:** Assumes that the LIL will be available at up to 225 MW³² for November 2021 through June 2022 and available at full capacity thereafter. This case assumes a DAFOR of 15% for the Holyrood TGS as well as the retirement of the Holyrood TGS, Hardwoods GT, and Stephenville GT on March 31, 2023. No LIL deliveries are contemplated in advance of November 2021.
- **Scenario 4:** Varies from Scenario 3 by increasing the Holyrood TGS DAFOR to 18%.
- **Scenario 5:** Varies from Scenario 3 by increasing the Holyrood TGS DAFOR to 20%.

³¹ “Near-Term Reliability Report,” Newfoundland and Labrador Hydro, May 17, 2021.

³² As noted in Section 7.1.2, since the filing of the “Near-Term Reliability Report” in May 2021, the LIL has been successfully operated up to 315 MW. Given that the results presented in subsequent sections have been prepared using Scenarios 3–5 as described above, Hydro did not adjust the scenario presented. Operation of the LIL at higher levels will have a positive impact on system reliability, reducing LOLH and EUA. Given that the results presented in subsequent sections have been prepared using the forecast provided in Table 7, Hydro did not adjust the forecast presented.

- **Scenario 6:** Varies from Scenario 1 by assuming that the LIL is not available through the study period (2021 through the end of 2025). The operation of Holyrood TGS, Hardwoods GT, and Stephenville GT is extended through the study period at baseline forced outage rates.
- **Scenario 7:** Varies from Scenario 6 by increasing the Holyrood TGS DAFOR to 18%.
- **Scenario 8:** Varies from Scenario 6 by increasing the Holyrood TGS DAFOR to 20%.
- **Scenario 9:** Varies from Scenario 8 by including 50 MW of imports during the winter season.
- **Scenario 10:** Varies from Scenario 8 by including 100 MW of imports during the winter season.
- **Scenario 11:** Varies from Scenario 6 by excluding industrial load from NARL.
- **Scenario 12:** Varies from Scenario 8 by excluding industrial load from NARL.

For Scenarios 6–12 it is assumed that the contract for capacity assistance with Vale is renewed for the winter season in the study period. Note that this agreement has been renewed as detailed in Section 7.1.3.

For CBPP capacity assistance, the existing contract is included in the winter season for the study period.

7.4.2 Expected Unserved Energy and Loss of Load Hours Analysis

Annual Assessment Results

Table 10 provides the annual LOLH, EUE and Normalized EUE results. Note that the basis for comparison of results is Hydro's existing LOLH criteria of not more than 2.8 hours per year. Hydro's intends to migrate to its proposed criteria of 0.1 LOLE when the Muskrat Falls Project has been fully commissioned and thermal generation at Holyrood TGS, Hardwoods GT, and Stephenville GT has been retired.

³⁴ Parts per million (“ppm”).³⁵ Normalized EUE given here in parts per million and it represents lost load as a fraction of total system load. NERC recommends system operators consider NEUE a reliability metric, but a single target threshold has not been set. Different jurisdictions use targets ranging from 10 to 30 ppm.³⁶ Results for 2021 are from June 1 through December 31.

1 The results of Scenarios 1 through 5 indicate that the availability of the LIL, at partial or full capability,
2 backed up by the Holyrood TGS mitigates the risk of lost load and unserved energy in the near term.

3 The results of Scenarios 6 through 8 indicate that if the LIL is unavailable during the winter operating
4 season, both LOLH and EUE grow as the unavailability of the Holyrood TGS increases.

5 As demonstrated in Scenarios 9 and 10, imports over the Maritime Link could be used to mitigate the
6 risk of generation shortfall in the event of a high degree of unreliability at the Holyrood TGS. An import
7 of 100 MW in the on-peak hours from December to March would be sufficient to reduce the risk of
8 generation shortfall to an acceptable level in the most onerous modelled scenario.

9 As previously noted, the results presented for Scenarios 1–10 include the potential for lost load
10 assuming Hydro serves the demand and energy requirements previously forecast for NARL. Since filing
11 its “Near-Term Reliability Report,”³⁷ Hydro has received indication that NARL will remain in warm idle
12 mode through winter 2021–2022. This will have a positive impact on LOLH and EUE for Scenarios 1–10,
13 comparable to the benefit that can be observed when comparing results for Scenarios 11 and 12 against
14 results for Scenarios 6 and 8, respectively.

15 **Monthly Assessment Results**

16 Table 11 provides analyses of LOLH and EUE for the winter operating season by month. The monthly
17 analyses provide additional detail that assists in examining the complexity of the changing power system
18 that would not necessarily be apparent from an analysis of the annual results only. Completing monthly
19 analyses allows for easier identification of changes in system behaviour. For example, if a system had a
20 change in forecast peak demand with no resultant change in annual LOLH or EUE, the monthly analysis
21 would indicate where differences in LOLH and EUE were anticipated, allowing for better understanding
22 of the drivers of the annual results. This type of analysis is used by utilities regulated by the North
23 American Electric Reliability Corporation (“NERC”) to complement long-term reliability assessments.

24 In Scenarios 1 though 5, the availability of the LIL, at partial or full capability, backed up by the Holyrood
25 TGS in 2022, mitigates the risk of lost load and unserved energy.

³⁷ “Near-Term Reliability Report,” Newfoundland and Labrador Hydro, May 17, 2021.

- 1 In Scenarios 6 through 8, the LOLH and EUE remain high throughout the study period, and without
 2 mitigation, indicate a relatively high probability of lost load on the system until the LIL is found fully
 3 reliable.
- 4 As seen in Scenarios 9 and 10, the import of firm energy over the Maritime Link produces a significant
 5 improvement in system reliability. This demonstrates that firm imports could mitigate the increased risk
 6 of resource shortfalls if the LIL is delayed or if the Holyrood TGS or other generating assets were to
 7 perform more poorly than expected.

8.0 Risk and Risk Mitigation

Hydro's readiness planning for the 2021–2022 winter season is progressing; several unplanned events and related work activities are influencing Hydro's outage schedule and remaining planned work for the next couple of months. While Hydro continues to adjust its plans as necessary, the current outlook anticipates all generation being available by December 6, 2021.

Potential system risks and associated mitigation plans are described in the following sections; updates will be provided in subsequent reports winter readiness reports.

8.1 Bay d'Espoir Operations

Bay d'Espoir generation is expected to be fully available by December 6, 2021. Four risks to winter readiness and/or reliable operations are described below.

8.1.1 Bay d'Espoir Unit 5 Return to Service

As part of the Hydraulic Generation Refurbishment and Modernization projects, Hydro is completing a unit overhaul and generator rewind on Bay d'Espoir Unit 5 and a gate replacement for Intake 3 which serves Units 5 and 6. The return to service of Bay d'Espoir Unit 5 following these capital works was originally planned for October 22, 2021 but is now estimated to be December 6, 2021. The delay is associated with the generator rewind project due to greater than anticipated work associated with the stator bar removal and stator cleaning. The overhaul of Unit 5 and replacement of the gate for Intake 3 are progressing as planned, though their commissioning activities remain on the critical path for returning Unit 5 to service.

The latest update from the contractor completing the generator rewind indicates that completion of their scope of work is delayed to November 17, 2021. Due to the existence of a compound injected into the stator core slots in the 1970s,³⁹ removal of stator bars was difficult and the selected cleaning method was not entirely effective and had to be supplemented with time-consuming manual cleaning. As of September 30, 2021, the existing stator windings have been removed, stator core cleaning work is complete, and the installation of new stator windings is in progress.

Once the contractor's work related to the rewind is complete, the unit will be handed over to Hydro for the remaining generator overhaul and reassembly work, which is expected to be completed by

³⁹ As recommended by the original equipment manufacturer ("OEM").

1 November 24, 2021. This will be followed by commissioning of the new intake gate and unit start-up
2 commissioning, with the current return to service for Unit 5 expected on December 6, 2021.

3 **8.1.2 Upper Salmon Corrective Maintenance**

4 During the 2021 planned annual preventative maintenance checks in August a significant crack on one of
5 sixteen rotor rim guidance blocks was discovered. The discovery of this crack prompted Hydro to expand
6 its inspection scope to include the use of non-destructive testing (“NDT”) methods to assess the
7 remaining rim guidance blocks. The results from this expanded inspection revealed that over 35% (6 of
8 16) of the rim guidance blocks exhibited cracking.

9 In consultation with the OEM for the unit, it was determined the cracking is beyond repair and block
10 replacement was immediately required before the unit could be placed back into reliable service. With
11 35% of the blocks exhibiting cracking, the OEM recommended replacing all 16 blocks. The OEM
12 considers the root cause of this issue to be a combination of an out-of-round stator and loose rotor rim;
13 addressing this life extension work cannot be accommodated prior to the 2021–2022 winter season;
14 however, replacement of the blocks before the 2021–2022 winter season is considered a suitable
15 approach by the OEM to reduce the residual risk to an acceptable level. The planned life extension work
16 is expected to be carried out in 2022 to address the underlying root causes, subject to submission and
17 approval by the Board. In combination with the block replacement, the OEM also recommends
18 implementing an NDT inspection program of the blocks at 12 week intervals until life extension work is
19 completed. Hydro has planned to include this inspection program in its activities moving forward.

20 Hydro has commenced execution activities to replace the 16 rotor rim guidance blocks with an original
21 planned return to service date of the unit estimated for October 12, 2021. On October 1, 2021 a
22 potential COVID-19 exposure at the Upper Salmon work site led to a temporary suspension of work.
23 Activities resumed on October 6, 2021 and Hydro now anticipates a return to service date of October 20,
24 2021.

25 Although Hydro has mitigated risk of failure to the extent possible in the near term, there is residual risk
26 that a failure could occur before further life extension work is executed. To offset the impact of an
27 unplanned outage Hydro is advancing procurement of long lead materials that would address the
28 underlying root causes.

1 8.1.3 Bay d'Espoir Penstocks - Update

2 As a result of previous ruptures of the Bay d'Espoir penstocks, with the most recent being September
3 2019, Hydro has continued to complete annual inspections of Bay d'Espoir Penstocks 1, 2, and 3 to
4 monitor penstock condition and ensure reliability in the short term.

5 Penstock 1 was inspected in the spring of 2021 and during the inspection, 31 indications of weld
6 deterioration were identified in 16 longitudinal weld seams over an approximately 200 foot span of the
7 penstock, with indications ranging in length from a couple of inches to 8 feet. The indications were
8 similar in condition to those discovered in recent years and were shallow in depth. Weld refurbishment
9 and final inspection was completed and the penstock returned to service. This discovery was not
10 unexpected given the known condition of the Bay d'Espoir Penstocks. Hydro will use the information
11 obtained through the inspection and refurbishment process to inform its long-term plan for the
12 penstocks; the details of Hydro's long-term plan are expected to be filed with the Board in 2022.

13 The inspection for Penstock 2 was completed in June 2021 and did not identify any major defects or
14 areas of concern for the upcoming WR period. The inspection of Penstock 3 was completed in August
15 2021 and did not identify any major defect or areas of concern for the upcoming WR period.

16 Hydro has continued to take proactive measures to reduce downtime should another penstock leak
17 occur. Hydro has maintained its inventory of pre-rolled steel plate, consulted with third-party
18 contractors to confirm priority availability of local welding resources, and will mobilize an excavator to
19 the penstock area in December 2021 to avoid potential transportation issues during winter months
20 when the access roads can be snow covered and icy. Modifications to the Automatic Generator Control
21 application in Hydro's Energy Management System, designed to limit the amount of rough zone
22 operation, have remained in place for Units 1 to 6 at Bay d'Espoir. The more prescriptive operating
23 regime has also remained in place for Units 1 and 2 given the history of Penstock 1. In this operating
24 regime, once dispatched, Unit 1 and 2 are limited to a minimum unit loading of 50 MW and are not
25 cycled or shut down as part of normal system operations.

26 Although Hydro has mitigated risk of failure to the extent possible, there is residual risk that a failure
27 could occur before further life extension work is executed. Hydro has estimated a 13- to 23-day repair
28 timeline, depending on circumstances, should a new failure occur.

1 8.1.4 Bay d'Espoir Terminal Station Circuit Breaker Failures – Update

2 Since October 2018, Hydro has experienced four failures of 230 kV General Electric (“GE”) dead tank
3 circuit breakers at the Bay d'Espoir Terminal Station.⁴⁰

4 Hydro has developed plans to minimize outage duration in the event of another failure by ensuring the
5 availability of spare breakers and spare breaker phases. In the event of a failure, the associated outage
6 duration to complete repairs is estimated to be two to three days. Hydro has also implemented new
7 generator operating instructions supplemented with additional breaker protection to reduce the risk of
8 failure. Hydro has developed a plan for replacement of the five GE generator breakers installed at Bay
9 d'Espoir, with one planned for 2022, two replacements planned in 2023, and the final two replacements
10 planned for 2024.

11 8.2 Holyrood Thermal Generating Station Operations

12 Hydro anticipates that the Holyrood TGS will be fully available by December 1, 2021. Two risks to WR
13 and/or reliable operations are identified.

14 8.2.1 Unit 3 Return to Service

15 On September 11, 2021, Hydro experienced a cold-side tube failure on the Unit 3 boiler. Since the
16 failure, Hydro has been working with the boiler contractor (GE), the original manufacturer (B&W), a
17 metallurgy lab, and specialized NDT companies, to identify the cause of the failure and formulate an
18 inspection and repair plan. This work will ensure that all tube areas that could fail by the same cause are
19 inspected or replaced and that the boiler can safely return to service. It is expected that this work will be
20 complete and the unit back in service in advance of the December 1, 2021 WR date. The work is
21 progressing and a further status update will be provided in the November update to this report.

22 8.2.2 Variable Frequency Drives

23 Variable frequency drives (“VFD”) on the Holyrood TGS unit’s forced draft fans continue to present a risk
24 for forced outages. In September 2021, just after completion of the annual PM program by the OEM
25 service technician, 9 out of 24 VFD power cells on Unit 3 failed (each drive utilizes 4 power cells per
26 phase and a failure of two cells on the same phase will cause the drive to trip). The VFD power cells are
27 at highest risk of failure during start-up activities. Hydro has implemented additional OEM

⁴⁰ “Bay d’Espoir Terminal Station General Electric Dead Tank Circuit Breaker Failure Report,” Newfoundland and Labrador Hydro, February 14, 2020, provided as part of Hydro’s further update to its 2019–2020 Winter Readiness Planning Report.

1 recommendations for outage periods to keep the drives clean and dry; thus far these efforts have not
2 reduced failures. Global shortages of micro-chips and other electronic components as a result of the
3 pandemic could delay turnaround time for up to a year for some of these cells. Hydro is expediting the
4 repair and return of the failed power cells and exploring the availability of additional cells for purchase
5 to ensure sufficient inventory prior to December 1, 2021. Hydro is also exploring the possibility of
6 bypassing the drives on one or two units this fall and returning to the original inlet vane air flow control
7 as a contingency plan. This action would eliminate the risk on the bypassed units and provide additional
8 spare components to mitigate risk on the other unit or units. A further status update will be provided in
9 the November 2021 update to this report.

8.3 Muskrat Falls to Happy Valley Interconnection Project

Hydro is planning to complete the Muskrat Falls to Happy Valley Interconnection this fall⁴¹ and supply Labrador East with power from Muskrat Falls for the winter of 2021–2022. As a contingency, Hydro plans to maintain its ability to supply Labrador East using the 138 kV interconnection to Churchill Falls via transmission line L1301/1302 should issues arise with the Muskrat Falls to Happy Valley Interconnection.

An update on the interconnection will be provided in the November 2021 report.

9.0 Conclusion

Hydro is progressing towards completion of its AWP and WR activities. Several recent unplanned events have resulted in the addition of priority work and related impacts to outage schedule planning across the system. The unplanned work is ongoing and Hydro is working to minimize the potential impact on readiness for winter operations. Hydro's expects all generation to be available by December 1, 2021, with the exception of Bay d'Espoir Unit 5, which is presently scheduled to return to service on December 6, 2021.

Hydro will continue to monitor progress and mitigate work execution risks. Hydro will file its next 2021–2022 Winter Readiness Planning Report by November 10, 2021.

⁴¹ It is anticipated that the interconnection will proceed after Muskrat Falls Unit 1 returns to service from a planned outage on or around October 21, 2021.

Master Generation Outage Schedule

1 Master Generation Outage Schedule

2 Newfoundland and Labrador Hydro's Master Generation Outage Schedule for the period September 1 to
3 December 31, 2021 will be provided in the November 2021 update to the 2021–2022 Winter Readiness
4 Planning Report. Please see Section 5.0 for further information.

Appendix E

Critical Spares Status Listing – Thermal Generation

Inventory Status
 In Stock
 Non-Stock
 On Order

Explanation
 Stock quantity of '1' or more in warehouse inventory.
 Item is not stocked, '0' quantity in warehouse, ordered as required. See Notes column.
 Quantity of '0' stock in warehouse, quantity of 1 or more on order or out for refurbishment.
 NOTE: Items may be listed as critical for multiple components, resulting in multiple 'On Order' status'.
